Drayton, Polyolbion, song 26. (Ord MS.)

5. Form of the surface, with regard to roughness and smoothness.

The smaller the particles of cutting substances are, the smaller will be the scratches by which they continually fret and wear away the glass until it be polished; but be they never so small, they can wear away the glass no otherwise than by grating and scratching it, and breaking the protuberances; and therefore polish it no otherwise than by bringing its roughness to a very fine *grain*, so that the scratches and frettings of the surface become too small to be visible.—*Sir I. Newton, On Opticks.*

[The term *grain* is a translation of Greek κοκκος, given to the insect from its resemblance to a seed or kernel, whence the colour dyed with it was called κοκκινος, or in Latin *coccineus*, as from *kermes*, the oriental name of the insect, Italian *carmesino*, crimson. The term *grana* is applied in Spanish as well to the dye itself as to the cloth dyed with it, and also metaphorically to the fresh red colour of the lips and cheeks. Hence probably the *grain* of wood or of leather, the ornamental appearance of the surface dependant on the course of the fibres. The *grain* of leather is the shining side, in French *grain*, or *fleur de cuir*; *fleur* in the sense of brilliancy, lustre. The Spanish *lez* is explained by Neumann *grain*, shining surface, bloom of the human face. No doubt the term may have its origin in the finer or coarser *grains* of which stone is composed, and the expression may have been transferred from stone to wood and leather, but the former explanation appears to me most probable.—*Wedgwood, Dictionary of English Etymology.*]

The *graining* is also shortly characterized by Shaw, in his General Zoology. . . . One of the streams which produce the *graining* rises in Knowsley Park. . . . Several streams in the township of Burton Wood and Sankey, . . . and others in or near the township of Knowsley, produce the *graining* in considerable numbers. . . . The first dorsal fin-ray in the *graining* is short, the second ray the longest.—*Yarrell, British Fishes.*

We have frequently demonstrated in another work, that the rasorial types throughout ornithology always contain birds which seem to have an instinctive disposition towards domestication; and we may observe that all *grallatorial* types, however sociably they live among themselves, are yet so remarkably different from the former, that they appear to shun the very approach of man,—never, from choice, coming near his dwellings. . . . The swiftest running birds . . . are the typical *grallatores*, for they only make use of their wings when suddenly disturbed; they are in continual motion, and their pace is always a swift run.—*Swainson, On the Natural History and Classification of Quadrupeds*, §§ 311, 312.

The *grampus* is the largest of the dolphins, being from twenty to twenty-five feet in length, and a most cruel enemy to the whale. The *grampuses* attack the latter in troops, harass it until it opens its mouth, and then they devour the tongue.—*Translation of Cuvier's Règne Animal.*

Many fabulous or exaggerated stories have been universally propagated respecting the *grampus.* It has been considered as not only the most formidable enemy of the larger whales, attacking them in numerous bands, with the utmost fury, and worrying them even to death, but it has been accused of pursuing the common whale for a purpose which would indicate a gastronomic taste worthy of Heliogabalus himself. It is said to harass its huge victim till in its terror and agony it opens its mouth; when the *grampus* darts upon the tongue and tears and devours the delicious morsel. The truth appears to be, as far as credible testimony can be obtained, that the *grampus* is extremely voracious.... Hunter found... a portion of a porpoise in the stomach of one which he examined.—*Bell, History of British Quadrupeds, including the Cetacea.*

In wanton dance they praise the bounteous Pan.

Gránite. *s.* [Italian, *granito* = grained.] In *Mineralogy* and *Geology*. Stone, or rock, so called.

Granite [is] a stone composed of separate and very large concretions, rudely compacted together; of great hardness, giving fire with steel; not fermenting with acids, and imperfectly calcinable in a great fire. The hard white *granite* with black spots, commonly called moor-stone, forms a very firm, and though rude, yet beautifully variegated mass. It is found in immense strata in Ireland, but not used there. In Cornwall it is found in prodigious masses, and brought to London, for the steps of publick buildings. Hard red *granite*, variegated with black and white now called oriental *granite*, is valuable for its extreme hardness and beauty, and capable of a most elegant polish.—*Sir J. Hill, On Fossils.*

He heard, and *granted* half his prayer;
The rest the winds dispers'd. *Pope.*

[*Grant.*—Much difficulty is thrown on the etymology of this word by the concurrence of forms which can hardly be traced to a common origin. From Latin *gratus* is formed Italian *grado*, Provençal *grat*, French *gré*, will, liking, consent, and thence Italian *gradire, aggradare, aggradire*, French *gréer, agréer*, English *agree*, to approve, allow, give consent to. In Middle Latin *gratus*, or *gratum*, was used as a substantive; 'sine *gratu* meo,' without my consent. ... The insertion of the nasal converted *gratum* into *grantum*, in the same sense. ... *Facere gratum* and *facere grantum*, or *gratificare*, are found indifferently in the sense of making satisfaction. ... We have next the verbs *gratare, grantare, gratificare*, French *gréer*, in the sense of doing an agreeable thing, bestowing a gift, making over an interest, assenting to an arrangement. ... If the foregoing forms had stood by themselves, the derivation from *gratus* would not have been doubtful, but parallel with these are found *graantum, ... graantagium, ...* French *craanter, creanter, creancer*, to promise, engage for, to bind oneself; *créancie, créanche, creant, crant*, assurance, contract, engagement, obligation. Now it is hardly possible that *grant* could be converted by mere corruption into *graant, creant*, the double *a* in the old French being an almost certain sign of the loss of a *d*, as in *aage* from *edage, caablé* from *cadable, baer, béer*, from *badare*. On this principle French *créance* would be the equivalent of a Latin *credentia*, trust, confidence, assurance. 'Ego B. archiepiscopus accipio te Raymundum in fide et *credentia* mea loco sacramenti.' (Chart. A. D. 1157, in Carp.) Old French *craant*, believing. 'Sire si com c'est voirs et s'en somes *craant*.' (Roquefort.) The Breton *cred*, the root of *credi*, Latin *credere*, to believe, is used in the sense of assurance, obligation, security, *créance*, caution, garant. (Legonidec.) The pronunciation of the north of France, which regularly changes an initial *gr* into *cr* (converting gras, grappe, grand-dieu, into cras, crappe, crand-dieu—Hécart) would leave so little difference between *cranter*, to confer an advantage, from *gratus*, and *craanter*, to assure, from *credere* (both used with equal frequency in legal instruments in the act of transferring a right), that it is not surprising if the two were confounded. We find accordingly the *g* of *gratus* united with the *aa* of *craanter*, and *gratare, grantare*, used in the sense of *creantare*. 'Super istas pactiones omnes sæpe nominati Domino de Legniaso *graantaverant* (engage, pledge themselves) quod tenebunt, &c.' 'Præmissa omnia et singula immobilia tenere et fideliter adimplere promiserunt et *gratavérunt*.'—*Wedgwood, Dictionary of English Etymology.*]

2. Green as grass: (in this case *two words* rather than a *compound*).

Apple-green did not mean the colour of any green apple casually taken; but a certain definite colour which the student was to bear in mind, whether or not he had ever seen an apple of that exact hue. The words were not a description, but a record of the colour: the memory was to retain a sensation, not a name. The imperfection of the system (arising from its arbitrary form) was its incompleteness: however well it served for the reference of the colours which it did contain, it was applicable to no others, and thus though Werner's enumeration extended to more than a hundred colours, there occur in nature a still greater number which cannot be exactly described by means of it. In such cases the unclassed colour is, by the Wernerians, defined by stating it as intermediate between two others: thus we have an object described as between emerald-green and *grass-green*. . . . It is not always between contiguous members of the series that the undescribed colour is found. If we place emerald-green between apple-green and *grass-green*, we may yet have a colour intermediate between emerald-green and leek-green; and, in fact, the Wernerian series of colours is destitute of a principle of self-arrangement and gradation; and is thus necessarily and incurably imperfect.—*Whewell, History of Scientific Ideas*, vol. i. p. 343: ed. 1858.

While cicada is rendered a *grasshopper*, we commonly think that which is so called among us to be the true cicada; wherein, as we have elsewhere declared, there is a great mistake; for we have not the cicada in England, and indeed no proper word for that animal, which the French nameth 'cigale:' that which we commonly call a *grasshopper*, and the French 'saulterelle,' being one kind of locust, so rendered in the plague of Egypt, and in old Saxon named 'gersthop.'—*Sir T. Browne, Miscellanies*, p. 109

Where silver lakes, with verdant shadows crown'd,
Disperse a grateful chilness all around;
The *grasshopper* avoids th' untainted air,

When the loose mountain trembles from on high,
Shall *gravitation* cease, if you go by?
Pope, Essay on Man.

If it were true that the fall of an apple was the occasion of Newton's pursuing the train of thought which led to the doctrine of universal *gravitation*, the habits and constitution of Newton's intellect, and not the apple, were the real source of this great event in the progress of knowledge. The common love of the marvellous, and the vulgar desire to bring down the greatest achievements of genius to our own level, may lead men to ascribe such results to any casual circumstances which accompany them: but no one who fairly considers the real nature of great discoveries, and the intellectual processes which they involve, can seriously hold the opinion of their being the effect of accident.—*Whewell, Novum Organon renovatum*, p. 48.
Speaking with reference to physical phenomena, it is difficult to separate the idea of causation from that of force, and these have been regarded as identical by some philosophers. To take an example which will contrast these two views: if a floodgate be raised, the water flows out; in ordinary parlance the water is said to flow because the floodgate is raised; the sequence is invariable; no floodgate, properly so called, can be raised without the water flowing out, and yet in another, and perhaps more strict sense, it is the *gravitation* of the water which causes it to flow. But though we may truly say that, in this instance, *gravitation* causes the water to flow, we cannot in truth abstract the proposition and say, generally, that *gravitation* is the cause of water flowing, as water may flow from other causes —atmospheric pressure, for instance, which causes water to flow into an exhausted receiver—and *gravitation* may, under certain circumstances, arrest instead of causing the flow of water.—*Grove, Correlation of Physical Forces*.

Grávity. *s.*

1. Weight; heaviness; tendency to the centre.

That quality by which all heavy bodies tend towards the centre, accelerating their motion the nearer they approach towards it, true philosophy has shewn to be unsolvable by any hypothesis, and resolved it into the immediate will of the Creator. Of all bodies, considered within the confines of any fluid, there is a twofold *gravity*, true and absolute, and vulgar or comparative: absolute *gravity* is the whole force by which any body tends downwards; but the relative or vulgar is the excess of *gravity* in one body above the specifick *gravity* of the fluid, whereby it tends downwards more than the ambient fluid doth.—*Quincy*.
Bodies do swim or sink in different liquors, according to the tenacity or *gravity* of those liquors which are to support them.—*Sir T. Browne, Vulgar Errours*.
Though this increase of density may at great distances be exceeding slow, yet if the elastick tone of this medium be exceeding great, it may suffice to impel bodies from the denser parts of the medium towards the rarer, with all that power which we call *gravity*.—*Sir I. Newton, On Opticks*.
Fourcroy explained the operation of mercury by its specific *gravity*, and the advocates of this doctrine favoured the general introduction of the preparations of iron, especially in scirrhus of the spleen or liver, upon the same hypothetical principle; for, say they, whatever is most forcible in removing the obstruction must be the most proper instrument of cure; such is steel, which, besides the attenuating power with which it is furnished, has still a greater force in this case from the *gravity* of its particles, which, being seven times specifically heavier than any vegetable, acts in proportion with a stronger impulse, and therefore is a more powerful deobstruent. This may be taken as a specimen of the style in which these mechanical physicians reasoned and practised.—*Dr. Paris, Pharmacologia*, pp. 38–9.
When we say that the force which holds the planets in their orbits is resolved into *gravity*, or that the force which makes substances combine chemically is resolved into electricity, we assert in the one case what is, and in the other case what might, and probably will ultimately, be a legitimate result of induction. In both these cases, motion is resolved into motion.—*J. S. Mill, System of Logic*, b. v. ch. v. § 3.

2. Atrociousness; weight of guilt.

No man could ever have thought this reasonable, that had intended thereby only to punish the injury committed, according to the *gravity* of the fact.—*Hooker, Ecclesiastical Polity*.

Gray. See Grey.

Gráyling. *s.* Native fish so called, Coregonus thymallus, Umber.

The *grayling* lives in such rivers as the trout does, and is usually taken with the same baits, and after the same manner: he is of a fine shape, his flesh white, and his teeth, those little ones that he has, are in his throat. He is not so general a fish as the trout, nor so good to eat.—*Walton, Angler.*

Grayling are never found in streams that run from glaciers—at least near the source; and they are killed by cold or heat. I once put some *grayling* from the Teme, in September, with some trout, into a confined water rising from a spring in the yard at Downton; the *grayling* all died, but the trout lived. And in the hot summer of 1825, great numbers of large *grayling* died in the Avon below Ringwood, without doubt killed by the heat in July.—*Sir H. Davy, Salmonia, Seventh Day.*

The *grayling*, though abundant in some streams, is a very local fish. Similar in many respects to the trout in its habits and wants, there are numbers of rivers abounding with trout that do not produce the *grayling*.... Three *graylings*, weighing together twelve pounds, were caught... in the Avon near Ringwood. A *grayling* of four and a half pounds weight has been killed in the Test, and one of five pounds is recorded to have been caught near Shrewsbury.... The term 'Thymallus' is said to have been bestowed upon this fish on account of the peculiar odour it emits when fresh from the water, which is said to resemble that of thyme; and from its agreeable odour as well as smell, St. Ambrose is recorded to have called the *grayling* the flower of fishes. To be eaten in perfection it cannot be dressed too soon. The name *grayling* is supposed to be a modification of the word 'gray-lines,' in reference to the dusky longitudinal bars along the body. —*Yarrell, British Fishes.*

I wind about, and in and out,
With here a blossom sailing,
And here and there a lusty trout,
And here and there a *grayling*.

The present species is considered to be the origin from which our valuable domestic race is derived. . . . It will be observed that I have resumed the old name of *grey-lag goose*, believing that the term lag, as applied to this *goose*, is either a modification of the English word *lake*, the Latin *lacus*, or, perhaps, an abbreviation of the Italian *lago*, from which latter country it is even probable that we might have originally obtained this our domesticated race.—*Yarrell, British Birds.*

Grimálkin. *s.* [The ordinary analysis of this word—a word which has been specially illustrated by more than one influential writer, is *gri* = *gray*, and *mal-kin* = diminutive of *mall*; to which root is given the sense it has in the provincial term *mawkin* = scarecrow. Hence, the details of the transition being obscure, it is brought to denote, as a proper rather than a common name, *cat*.
That *cat* is both the current and the early *meaning* of the word is beyond doubt. It is suggested, however, that its true import was not very clear to those who first used it. It meant, not so much the *cat* in general, but the *cat* that played a part in the orgies of *witches*—

'I come, *Grimalkin*—Paddock calls—Anon.
Fair is foul and foul is fair,
Hover through the fog and filthy air.'
(Shakespear, Macbeth, i. 1.)

To the phraseology descriptive of matters of this kind, it is likely that the German language, through the numerous itinerant showmen, mountebanks, and players of the time of Queen Elizabeth, contributed. If so, a witches' song, in which some word like the one under notice was, at the same time, both prominent and misunderstood, might supply it; the connection between the witches and the cats doing the rest. Such a song, beginning with the words *Graue wölken* (=grey clouds) in the form of a compound *Grauwölken*, is to be found in at least one of the existing German dialects. See Ferminich, p. 3, for an East Frisian Hexenlied.] Gray little woman; name of an old cat.

Against a stump his tusk the monster *grinds*,
And in the sharpen'd edge new vigour finds.
Dryden, Fables.

4. Rub one against another.

That the stomach in animals *grinds* the substances which it receives, is evident from the dissection of animals, which have swallowed metals, which have been found polished on the side next the stomach.—*Arbuthnot, On the Nature and Choice of Aliments.*

5. Harass; oppress.

Some merchants and tradesmen, under colour of furnishing the colony with necessaries, may not *grind* them so as shall always keep them in poverty. —*Bacon, Advice to Villiers.*

Another way the Spaniards have taken to *grind* the Neapolitans, and yet to take off the odium from themselves.—*Addison.*

We too shall, in our turn, be outstripped, and in our turn be envied. It may well be, in the twentieth century, that the peasant of Dorsetshire may think himself miserably paid with twenty shillings a week; that the carpenter at Greenwich may receive ten shillings a day; . . . that numerous comforts and luxuries which are now unknown, or confined to a few, may be within the reach of every diligent and thrifty working man. And yet it may then be the mode to assert that the increase of wealth and the progress of science have benefited the few at the expense of the many, and to talk of the reign of Queen Victoria as the time when England was truly merry England, when all classes were bound together by brotherly sympathy, when the rich did not *grind* the faces of the poor, and when the poor did not envy the splendour of the rich.—*Macaulay, History of England*, ch. iii.

3. Molar, or grinding, tooth.

The teeth are in men of three kinds: sharp, as the fore-teeth; broad, as the back-teeth, which we call the molar-teeth, or *grinders*; and pointed teeth, or canine, which are between both.—*Bacon, Natural and Experimental History.*

Nature is at a great deal of labour to transmute vegetable into animal substances; therefore herb-eating animals, which do not ruminate, have strong *grinders*, and chew much.—*Arbuthnot.*

The Ruminantia are, perhaps, the most natural and best determined of all the classes of quadrupeds, since they appear to be altogether constructed on the same model; the camels alone presenting us with some trifling variations from the common structure. The first and most striking character is the absence of cutting or incisive teeth in the upper jaw, their place being supplied by hard tubercles; but in the lower jaw there are almost always eight: between these latter and the *grinders* there is generally an empty space, which, in a few genera only, is occupied by one or two canine teeth. The *grinders*, of which there are almost always six on each side of both jaws, have their crowns marked with two double crosses, of which the convexity is turned inward in the upper teeth, and outward in the lower. —*Swainson, Natural History and Classification of Quadrupeds*, § 247.

4. Teeth.

One, who at sight of supper, open'd wide
His jaws before, and whetted *grinders* tried.

Grínding. *verbal abs.* Act, or process, by which anything is ground.

He that will have a cake out of the wheat, must needs tarry the *grinding*.—*Shakespear, Troilus and Cressida*, i. 1.

Grip. *s.* [Dutch, *grippel.*] Little ditch or trench.

In every variety of soil ploughed in the forms just described for winter, care should be taken to have plenty of channels, or *gaws*, or *grips*, as they are usually termed in Scotland, cut in the hollowest places, so as the surface-water may find them at every point by which to escape into the nearest ditch.—*Stephens, Book of the Farm.*

4. Cause a colicky pain.
   Thus full of counsel to the den she went,
   Grip'd all the way, and longing for a vent. *Dryden.*
5. Tighten. Such is the meaning in the following extract, provided the word be treated as an active or transitive verb; inasmuch as the hand, in the ordinary sense of the term, is the griping rather than the griped object. The construction, however, may also be considered as neuter, in which case to *gripe a hand* = tighten a hand. Putting anything in the condition of that which gripes is in the same predicament with 'walk a mile,' 'live a year,' and the like.
   Unlucky Welsted! thy unfeeling master,
   The more thou ticklest, *gripes* his hand the faster.
   Pope, Dunciad, ii. 209.

And rent away with ease the ling'ring gold.
Dryden, Translation of the Æneid.
The minister and his agents answered that Westminster Hall was open; that, if any man had been illegally imprisoned, he had only to bring his action; that juries were quite sufficiently disposed to listen to any person who pretended to have been oppressed by cruel and *griping* men in power; and that, as none of the prisoners whose wrongs were so pathetically described had ventured to resort to this obvious and easy mode of obtaining redress, it might fairly be inferred that nothing had been done which could not be justified.—*Macaulay, History of England,* ch. xx.

Grise. *s.* Little pig. See extracts.
[This etymology (Irish Gaelic *grisgin* = roast meat) may apply to a beefsteak when dressed, as well as a *griskin*; and therefore, notwithstanding Lye's endeavours to support it by adding that *grisgin* may be from *gris,* fire, the etymology must be sought elsewhere; and there can be no question that it is from *gris, grise,* or *grice,* a swine.—*Todd,* under *Griskin.*]
As we have occasion to show that there is no authority in the Lanercost Chronicle for one specimen of early verse cited thence by Ritson, we may here insert a couplet therein given under the year 1244, which has generally escaped attention. A Norfolk peasant, by name William, had left his father's house, and set out to seek his fortune with no other companion or possession but a little pig (porcellus), whence the people used to call him Willy *Grice,* but having in this way, wandering in France, met a rich widow, whom he wooed and wed, he became in the end a great man in the country. Still he piously remembered his early life of poverty and vagrancy, and among the other ornaments of one of the apartments of his fine house, to which he used to retire every day for an hour's meditation, he had himself pictured leading the pig as he used to do with a string, with this superscription in his native tongue:
Willie *Gris,* Willie *Gris,*
Thincke gwat thou was, and gwat thou es.
Grice, which is of frequent occurrence in Piers Plowman, and continued in use in England at least down to the middle of the 16th century, is still the common word for pig in Scotland.—*Craik, History of the English Language and Literature.*

That *gris* is the root of *griskin* is clear. Its own affinities are less evident. It, perhaps, is from the Fr. *gris* = grey, and meant in the first instance, a badger.

Grise. *s.* See Grees.
Let me speak like yourself; and lay a sentence,
Which as a *grise* or step, may help these lovers
Into your favour. *Shakespear, Othello,* i. 3

Grisette. *s.* [Fr.] In the last edition, the word being one of Todd's additions, the definition is 'wife or daughter of a tradesman.' This seems to have been taken from Boyer (Dictionnaire Royal François-Anglois et Anglois-François, 1753), in which the entry is—
Grisette, S.F. (jeune fille *ou* femme de basse condition) *a tradesman's Daughter or Wife, a plain girl* or *wench.* Some use the word *grizet.* Une jolie Grisette, a pretty plain girl.
In the Dictionary of the Academy (5th edition) two meanings are given to the word—
Grisette, un habit d'etoffe grise de peu de valeur que portent les filles du commun. *Grisette* se dit aussi d'une jeune fille ou d'une jeune femme de médiocre condition.
Bescherelle, adopting this, adds, 'Plus ordinairement jeune ouvrière coquette et galante.' He further remarks that whilst in Paris the term always conveys a disparaging meaning, in Gascony it merely means the daughter of an artizan in general.
The unfavourable import of the word can scarcely be so recent as Boyer and Todd suggest. The well-known lines of Swift beginning,
Queen of wit and beauty, Betty,
Never shall the muse forget ye, &c.,
with the coarse banter, are addressed to Betty the *Grisette.*
In the Complement to the Dictionary of the Academy, a third meaning is given; *grisette* being the names of several birds and butterflies.
When I am away, every body runs away with you, and carries you among the *grisettes,* or whither they will.—*Johnson, To Mrs. Thrale,* March 19, 1777. (Ord MS.)
Used *adjectivally.*
But her person—what d'ye think of that?—Pretty and agreeable.—A little *grisette* thing.—*G. Colman and D. Garrick, The Clandestine Marriage,* ii. 2.

Grískin. *s.* [diminutive of *grise.*] Defined by Johnson as the vertebræ of a hog broiled; upon which Todd remarks that the cookery does not confer the name, and that it may mean flesh, raw, fried, or roasted. That it is used in certain districts for a chine is true; but the editor believes that its original meaning was *sucking-pig,* this being the one suggested by the derivation. Then it seems to have been confounded with *brisket,* and taken for a part of the full-grown animal, instead of a dish of about the same size, consisting of the whole of the half-grown one. See Grise.

Grísly. *adj.* [A.S. *grislic,* from *agrisan* = frighten; terrify.—see Grizzly.] Dreadful; horrible; hideous; frightful; terrible.

Disordered hung about his shoulders round.

Gristle. *s.* [A.S.] Cartilage.

No living creatures that have shells very hard, as oysters, crabs, lobsters, and especially the tortoise, have bones within them, but only little *gristles*.—*Bacon, Natural and Experimental History.*

Lest the asperity or hardness of cartilages should hurt the œsophagus or gullet, which is tender and of a skinny substance, or hinder the swallowing of our meat, therefore the annulary *gristles* of the windpipe are not made round, or intire circles; but where the gullet touches the windpipe, there, to fill up the circle, is only a soft membrane, which may easily give way to the dilatation of the gullet.—*Ray, Wisdom of God manifested in the Works of the Creation.*

Gristly. *adj.* Cartilaginous; made of gristle.

At last they spit out pieces of their lungs; it may be small *gristly* bits, that are eaten off from the lung-pipes.—*Harvey.*

J. Philips, Cyder.

Grits are fossils found in minute masses, forming together a kind of powder; the several particles of which are of no determinate shape, but seem the rudely broken fragments of larger masses; not to be dissolved or disunited by water, but retaining their figure, and not cohering into a mass. One sort is a fine dull looking, grey *grit*, which, if wetted with saltwater into mortar or paste, dries almost immediately, and coalesces into a hard stony mass, such as is not easily afterwards disunited by water. This is the Pulvis Puteolanus of the ancients, mixed among their cements used in buildings sunk into the sea; and in France and Italy an ingredient in their harder plasters, under the name of pozzolane. It is common on the sides of hills in Italy. Another species, which is a coarse, beautifully green, dull *grit*, is the Chrysocolla of the ancients, which they used in soldering gold, long supposed a lost fossil. It serves the purpose of soldering metals better than borax. The ferrugineous black glittering *grit*, is the black shining sand employed to throw over writing, found on the shores of Italy.—*Sir J. Hill, On Fossils.*

Grittiness. *s.* Attribute suggested by Gritty.

In Fuller's earth he could find no sand by the microscope, nor any *grittiness*.—*Mortimer, Husbandry.*

This class Mr. Morris enlarges by the addition of *endlong*, *headlong*, *footling*, and *middling.* The creation of a verb out of a form so participial as the one under notice is easily conceived. For a further development of this doctrine the reader is referred to the paper itself, which is both critical and suggestive.] Lie prone; creep low on the ground.

And General Fireface, famous in the field,
A great tactician, and no less a swordsman,
Who ate, last war, more Yankees than he kill'd.
Byron, Don Juan, xiii. 88.
About this time a steeple-chase in the west of England had attracted considerable attention. This sport was then of recent introduction in England, and is, in fact, an importation of Irish growth, although it has flourished in our soil. A young *guardsman* who was then a guest at the castle, and who had been in garrison in Ireland, had some experience of this pastime in the Kildare country, and he proposed that they should have a steeplechase at Coningsby.—*Disraeli the younger, Coningsby*, b. iv. ch. xiv.

Gúdgeon. *s.* [Fr. *goujon, gouvion*; Lat. *gobio*.]
1. Native fish so called; Cyprinus gobio.
'Tis true, no turbots dignify my boards;
But *gudgeons*, flounders, what my Thames affords.
Pope, Imitations of Horace.
2. Credulous person; one easily cheated; simpleton. This application is generally deduced from the ease with which a gudgeon is caught, it being supposed to bite more freely than most other fishes. That it bites freely is true; but neither its voracity nor its credulity is sufficiently marked to pass into a proverb.
The following extract, like the others, is taken from the previous editions.
This he did to draw you in, like so many *gudgeons*, to swallow his false arguments.—*Swift.*
Here, the gudgeon is the swallower, not the thing swallowed; the dupe, not the bait.
In the following, however, the view is reversed, and the gudgeon is the thing swallowed.
Such as Gregory or Bede were, who being honest, and withal credulous, and trusting others, swallowed many a *gudgeon*.—*Favour, Antiquity's Triumph over Novelties*, p. 96: 1619.
Buchanan would not swallow that *gudgeon* of a British consul.—*Bishop Lloyd, History of Church Government in Great Britain*, pref.: 1684.
The same is the case in the following French examples, both from Wedgwood, '*cha passe come un gouvion*,' from the proverb (= 'that goes down as a gudgeon,' or 'that is easily swallowed'), and *faire avaler des gouvions* (= 'make gudgeons be swallowed,' or 'make a lie believed').
Of *gudgeons*, however, having been swallowed with particular ease there is no very good evidence; though there is a good deal in favour of the *loach* having been so treated. The loach is said, in most notices, to have been not unfrequently tossed off in toasts, or swallowed in a glass of wine, by the gallants of the Elizabethan period. It is suggested, then, that the *gudgeon*, when suggestive of credulity, is the loach. How much the two fishes have in common is well known. Both keep on the ground; both are marked or mottled; both have a beard or wattles. Moreover, in the zoological nomenclature, while the gudgeon is a *gobio*, the loach is a *cobitis*.
3. Iron pin on which a wheel turns.
Many times the iron *gudgeons* grow hot for want of greasing.—*History of making Gunpowder*, in *Bishop Sprat's History of the Royal Society*, p. 281.

B. Lytton, Eugene Aram*, b. i. ch. iii.

Fame is the spur that the clear spirit doth raise
To scorn delights, and live laborious days;
But the fair *guerdon* when we hope to find,
And think to burst out into sudden blaze,
Comes the blind fury with the abhorred shears,
And slits the thin-spun life. *Milton, Lycidas*, 71.
They were sure of being able, for a time at least, to indulge in pillage and murder, and to practise, without restraint, those excesses which they regarded as the choicest *guerdon* of a soldier's career.—*Buckle, History of Civilization in England*, vol. ii. ch. iv.

The smallest species is the *guevi*, or pigmy antelope of Shaw and the old writers of the Linnæan school. The size of the body in the stuffed specimens scarcely exceeded that of the Norway rat. The specimen in question stood under a bell glass, and, according to Major Smith, could not be more than eight inches high at the shoulder, while the legs did not exceed the thickness of a large goose-quill. In its native country this little creature is said to be prodigiously active. It seems common in Guinea, but will not survive the voyage.—*Swainson, On the Natural History and Classification of Quadrupeds.*

Brunnick's *guillemot*, is at once distinguished, at any season of the year, from our common *guillemot*, by the shortness, stoutness, angularity, and greater depth of its bill. . . . Examples of ringed *guillemot* have been taken in Lincolnshire, Yorkshire, and Durham, on the east coast, and in Cornwall and Wales in the south. . . . The black *guillemot*, a well-known species, is smaller in size than the common *guillemot*, and more confined to the northern parts of the British Islands. —*Yarrell, British Birds.*

The radius and ulna are present in all birds, and co-extended between the joints of the elbow and wrist. The antibrachium, so formed, is short where flight is abrogated; it is but one-third the length of the humerus, e.g. in the ostrich: it is rather shorter in *guillemots*, divers, and gannets; is about equal in length in galline, psophia, cariama; but exceeds the length in most birds of flight.—*Owen, Anatomy of Vertebrates.*

He mounted the scaffold, where the rude old *guillotine* of Scotland, called the Maiden, awaited him, and addressed the people in a speech, tinctured with the peculiar phraseology of his sect, but breathing the spirit of serene piety.—*Macaulay, History of England*, ch. v.

[*Guillotine*, the well-known implement said to be invented by Dr. Guillotin in the French Revolution . . . was but the revival of a mode of execution formerly in use in Germany. Crusius, in his Swabian Chron. translated by Moser, 1733, says: 'Formerly beheading was not done in Germany with a sword, but with an oaken plank on which was a sharp iron. This plank was like a flogging-bench, had on both sides upright slides (grund-leisten), on which the plank was; under that a sharp cutting iron. When the poor man was bound on the bench, as if for flogging, the executioner (truckenscherer) let fall the plank which hung by a cord, which with the iron struck off his head.—*Wedgwood, Dictionary of Etymology.*]

Guílty-like. *adj.* Like a guilty person. Construction in the following extract *adverbial*. It should be remembered that the preeminently adverbial affix *-ly* is only the word *like* in an abbreviated form.

That he would steal away so *guilty-like*
Seeing you coming. *Shakespear, Othello*, iii. 3.

Guínea. *s.* [see extract.] Gold coin valued at one and twenty shillings.

They [the ships belonging to the African company] brought home such store of gold that administered the first occasion for the coinage of those pieces, which from thence had the denomination of *guineas*; and what was afterwards made of the same species, was coined of the gold that was brought from that coast by the royal company.—*Lord Clarendon, Life*, ii. 376.
By the word gold I must be understood to design a particular piece of matter; that is, the last *guinea* that was coined.—*Locke.*

Guíneadropper. *s.* One who cheats by dropping guineas.

Who now the *guineadropper's* bait regards,
Trick'd by the sharper's dice, or juggler's cards.
Gay.

Guíneapig. *s.* Animal so called; cavy, Cavia aperea.

The name by which this stupid, defenceless, and very harmless little animal is commonly known, is founded upon an error of which I have in vain endeavoured to trace the origin; for I do not find in any author by whom it is mentioned any allusion to its being a native of Guinea. The country from which it truly derives its origin is the southern part of the South American continent. . . . It is not even used as food, nor is its fur of any value; and the only pretended use to which it is put is to banish rats from the place, these animals being supposed, but certainly without any reason, to have a particular antipathy to the *guinea-pig* and to leave in disgust the cellar or stable in which it is kept. . . . The *guinea-pig* is proved to have possessed from a very early period the same colours as now distinguish it; for F. M. Cuvier states that in the original figures of Aldrovandus, which he had examined, and which were painted within half a century of the discovery of America, appear the same white, red, and black patches. It must, therefore, have been previously domesticated by the natives.—*Bell, British Quadrupeds.*

Did often tremble at his horrid view. *Spenser.*

Of dreadful length, and dazzling arms, in *guise*
Of warriors old, with order'd spear and shield,
Awaiting what command their mighty chief
Had to impose. *Milton, Paradise Lost*, i. 563
Back, shepherds, back;
Here be without duck or nod,
Other trippings to be trod,
Of lighter toes and such court *guise*,
As Mercury did first devise. *Id., Comus*, 959.
Their external shapes are notoriously accommodated to that law or *guise* of life that nature has designed them.—*Dr. H. More.*

The Hugonots were engaged in a civil war, by the specious pretences of some, who, under the *guise* of religion, sacrificed so many thousands to their own ambition.—*Swift.*

Salads and eggs, and lighter fare,
Tune the Italian spark's *guitar*. *Prior.*
The shesta has six strings, and is of the same species with the *kitar*; whence our *guitar*, from

the Spanish *guitarra*, seems to have been borrowed; as it was a favourite instrument with the Arabian conquerors of Spain.—*Richardson, On the Languages, &c. of Eastern Nations*, ch. iii. sec. 6.

These are sights which we quiet men . . . occasionally enjoy, but which your noisy fellows, who think that women never want to be alone—a sad mistake—and consequently must be always breaking or stringing a *guitar*, or cutting a pencil, . . . or doing any other of the thousand acts of mischief, are debarred from.—*Disraeli the younger, The Young Duke*, b. iii. ch. v.

Black as his purpose, did the night resemble,
When he lay couched in the ominous horse,

With blood of fathers, mothers' daughters, sons.
Id., Hamlet, ii. 2.

Come, sons of honour,
True virtue's heirs; thus hatch'd with Britain's blood,

[*Gulf.*—Italian *golfo*, a gulf or arm of the sea, a pit, deep hole, whirlpool. (Florio.) French *golfe*, a whirlpool or bottomless pit, also a bosom or *gulf* of the sea between two capes. (Cotgrave.) The German *meerbusen*, Latin *sinus*, bosom, *gulf*, would point to a derivation from Greek κολπος, of exactly the same meaning with Latin *sinus*. But the sense of whirlpool, abyss, must be from Dutch *gulpen, golpen*, English *gulp*, to swallow; Old Dutch *golpe*, gurges, vorago. (Kilian.) The truth appears to be that here, as in so many other cases where we are puzzled between two derivations, they may both be traced to a common origin.—*Wedgwood, Dictionary of English Etymology.*]

Gúlfy. *adj.* Full of gulfs or whirlpools.

Whoso had seene them on the *gulphie* flood,
He would have thought some Delos now againe,

Shakespear, Timon of Athens, ii. 1.

The prominent angle at the symphyses of the upper mandible, the extent of the palmated membrane between the toes, indicate a degree of connection with the *gulls*; and [Sabine's] *gull* . . . by its slightly forked tail exhibits one point of resemblance to the greater number of the terns. Like the terns, too, some of the smaller *gulls* assume during the breeding season a dark-coloured head. . . . The black-headed *gull* is abundant on various parts of our coast. . . . The early describers of this species [Larus tridactylus] seem not to have been aware that the *gull* named the Tarrock was only the young state of that which had been previously called the kittiwake. . . . Colonel Montague was certainly mistaken in considering the kittiwake a rare bird on our southern coast. This *gull* is decidedly a rock breeder, and very common in the breeding season on all the rocky parts of the coast of Hampshire, Dorsetshire, Devonshire, and part of Cornwall.—*Yarrell, British Birds.*

2. Stupid animal; one easily cheated. See last extract.

That paltry story is untrue,
And forg'd to cheat such *gulls* as you.
Butler, Hudibras.

[To *gull*, to deceive, defraud. A metaphor from the helplessness of a young unfledged bird, on the same principle that the French *niais*, a nestling, is applied to a simpleton; a novice, ninny, witless and inexperienced *gull*. (Cotgrave.) The meaning of *gull* is simply unfledged bird, in which sense it is still used in Cheshire.

As that ungentle *gull* the cuckoo's bird.
(Hen. IV.)

It is especially applied to a gosling in the South of England. Probably from Danish *guul*, Swedish *gul*, yellow, from the yellow colour of the down, or perhaps of the beak, as in French *béjaune*, properly yellow beak, a young bird with yellow skin at the base of the beak, metaphorically 'a novice, a simple inexperienced ass, a ninny.' (Cotgrave.) Italian *pippione*, a pigeon (properly a young bird, from *pippiare*, to peep or pip), metaphorically a silly *gull*, one that is soon caught and trepanned. (Florio.) For this advantage age from youth has won,
As not to be out-ridden, though out-run;
By fortune he was now to Venus trin'd,
And with stern Mars in Capricorn was join'd:
Of him disposing in his own abode,
He sooth'd the goddess, while he *gull'd* the god.
Dryden.

This was a peculiarly satisfactory interview to both parties. Mr. Vanslyperken was overjoyed at the corporal's explanation, and the corporal was equally delighted at having so easily *gulled* his superior.—*Marryat, Snarleyyow*, vol. ii. ch. iii.

Nature has various tender muscles plac'd,
By which the artful *gullet* is embrac'd.
Sir R. Blackmore.

Gun. *s.* [see last extract.] General name for firearms; instrument from which shot is discharged by the sudden expansion of air, generally caused by the ignition of gunpowder.

Cleaveland.

In vain the dart or glitt'ring sword we shun,
Condemn'd to perish by the slaught'ring *gun*.
Granville.

[Much difficulty is thrown on the derivation of this word [*gun*] by the double uncertainty as to the period at which gunpowder was first used in European warfare, and the original meaning of the word itself. No doubt *gun* is frequently latinized by the names of the old instruments of the catapult kind. . . . *Catapulta*, by those who write in Latin, is used for fire-arms at a much later period, and down to the present day. *Carabijn*, catapulta equestris (Biglotton); *karabely*, catapulta de collo pendula. (Dankovsky.) Again we find *gun* used by Chaucer in translating *mangonneau*, where undoubtedly the engines intended in the original are of the ancient kind.

Dedans ceste tour a pierrières
Et engins de maintes manières;
Vous puissiez bien les *mangonneaux*
Voir pardessus les creneaux.
And eke within the castle were
Springoldis, *gonnes*, bows and archers.

But we must not look for scientific accuracy in a passage of this kind, and the name of any destructive engine of war would serve the purpose of the poet as well as another. For the same reason we cannot form a decisive conclusion as to the original meaning of the term from the passage where guns are mentioned in King Alisaunder.

Theo othre into the wallis stygh
And the kynges men with *gonnes* sleygh.—3968.

On the other hand it is certain that Chaucer uses the word in the modern sense in the House of Fame.

Swift as a pellet out of a *gunne*
When fire is in the powder runne.—B. III.

And the specific meaning of the term is distinctly pointed out by Arderne, a surgeon of the time of Edward III. cited by Way, who in describing different kinds of *fewe volant*, after a receipt for the composition of gunpowder (with the exception of the corning) proceeds: 'Cest poudre vault a gettere pelottes de fer, ou de plom, ou d'areyne, oue un instrument qe l'eu appelle *gonne*.' (Promptorium Parvulorum, Notes.) I have little doubt then that the term *gun* was originally applied to a fire tube or to the missile which it discharged, as in the Avowing of King Arthur.

There came fliand a *gunne*
And lemet as the leuyn.

As the names of the old engines were constantly applied to the new (espingarde, musket, caliver, petronel), it may well have happened that the name of the new was sometimes inexactly applied to the old.—*Wedgwood, Dictionary of English Etymology*.]

Blow great guns. Blow violently.

Look at that black cloud, no bigger than one's hand, to the southward. I tell you that before we are two hours older there will be a hurricane, and it will *blow great guns*.—*Sala, Dutch Pictures, The Ship-Chandler.*

Practically, it [the civilization of China] is the highest that Asia ever produced, although bearing no just comparison, owing to difference of race, with the civilizations of Europe, ancient or modern. This was made plain enough when, some months ago, a few *gun-boats*, belonging to two European nations, with a population between them hardly equal to that of a single province of China, ran up a Chinese river, and dictated a treaty that violated the laws of an empire which had undergone little change for three thousand years—which had witnessed the rise, decline, and fall of the Assyrian, Egyptian, Persian, Roman, and Arabian empires.—*J. Crawfurd, On the Civilization of Man*, in *Transactions of the Ethnological Society.*

A skilful *gunner*, with his left eye winking,
Levels directly at an oak hard by,
Whereon a hundred groaning culvers cry:
Down falls the cock, up from the touch-pan flies
A ruddy flash that in a moment dyes;
Off goes the gun, and through the forest rings
The thundering bullet, born on fiery wings.
Sylvester, Translation of Du Bartas. (Ord MS.)

At the beginning of October, two Turkish *gunners* came off to the Hastings, and giving information to Captain Lawrence that two hundred barrels of powder were stored in the castle, and that a train was laid from the town to the centre of the magazine proposed that we should send a party under their guidance to cut it off.—*Yonge, Naval History of England.*

Gúnwale. *s.* See extract.

The *gunwale* or *gunnel* of a ship [is] that piece of timber which reaches on either side of the ship from the half deck to the forecastle, being the uppermost bend which finisheth the upper works of the hull in that part, and wherein they put the stanchions which support the waste-trees; and this is called the *gunwale*, whether there be guns in the ship or no: and the lower part of any port, where any ordnance are, is also termed the *gunwale*.—*Harris.*

Rothe made fast a cable to her stern, and towed her off, but he could get her no further than a shoal, called Stubben, when she sunk; and soon after he had worked the Nyeborg up to the landing-place, that vessel sunk to her *gunwale*.—*Southey, Life of Nelson.*

If I be not ashamed of my soldiers, I'm a sowced *gurnet.*—*Shakespear, Henry IV. Part I.* iv. 2.

Cuvier's second family of the Acanthopterygii contains those genera, the species of which have their cheeks defended by indurated plates, which are sometimes spinous. Of the first genus of this family, Trigla, the *gurnards*, the British coast produces nine species, three of wnich are common, the others of rarer occurrence. They are chiefly caught by the trawl-net, used in deep water; as the *gurnards* mostly swim near the bottom, and are tenacious of life after they have been taken from the sea. . . . The red *gurnard* [Trigla cuculus] is very common on the English coast. . . . The piper [Trigla lyra] . . . is supposed to have gained the name of piper from the sound which escapes it when taken in hand from the sea. All the species, however, emit a grunting noise at intervals for a considerable time; which may have probably given origin to the name which distinguishes them by some corruption from the Latin *grunnio*, or the French *gronder*. . . . The grey *gurnard* [Trigla gurnardus] is much more common than either the piper or the streaked *gurnard.*—*Yarrell, British Fishes.*

The *gurnard* is known to emit a peculiar grunting sound on being removed from the water, to which disagreeable habit it owes its designation.—*Notes and Queries*, March 9, 1861.

2. Ebullient; exuberant; demonstrative: (applied, recently, to the temperament of females).

Rachel Norreys was a dangerously fascinating brunette. There was more danger for men in the society of this little brown girl, with her ready blood, her killing glances, her arch manner and animated conversation, than in association 'with the biggest, fairest Juno in creation.' . . . Then her temper was warm, impulsive, and energetic. She was quick to resent an injury to others, as she was to confess a fault of her own; passionate, but open as the day; 'a nervous creature, who lived twenty-four months in every twelve.' To add to the atmosphere of danger which surrounded this *gushing* young person, she is placed at the outset of the story in an odd, not to say false, position. She is a wife in nothing but name.—*Saturday Review*, February 10, 1866.

By reason, his false guide, is led astray;
Tossed by a thousand *gusts* of wavering doubt,
His restless mind still rolls from thought to thought.

As no man can well enjoy himself, or find sound content in anything, while business or duty lie unfinished on his hands, so when he has done his best toward the dispatch of his work, he will then comfortably take his ease and enjoy his pleasure; then his food doth taste savourly; then his divertisements and recreations have a lively *gustfulness*; then his sleep is very sound and pleasant.—*Barrow, Sermons*, xix.

The pure

gutta percha is a hydro-carbon, analogous to caoutchouc. The uses of *gutta percha* in the arts are most extensive. It is already the subject of numerous patents. Which melts like kisses from a female mouth,
And sounds as if it should be writ on satin,
With syllables which breathe of the sweet South,
And gentle liquids gliding all so pat in,
That not a single accent seems uncouth,
Like our harsh, northern, whistling, grunting, *guttural*,
Which we're obliged to hiss, and spit, and sputter all.—*Byron, Beppo*, 44.

Gúttural. *s.* Guttural sound, articulation, or letter.

He [Carteret] had ... acquired considerable influence over the mind of George the First. The other ministers could speak no German. The king could speak no English. All the communication that Walpole held with his master was in very bad Latin. Carteret dismayed his colleagues by the volubility with which he addressed his Majesty in German. Marston, Scourge of Villany, ii. 7.

Gwýniad. *s.* [Welsh; from *gwyn* = white.] Rare and local native fish so called, Coregonus lavaretus; schelly.

The species of the genus Coregonus are numerous in Europe, and several of them are so similar to each other, that, without the power of comparing those of this country with foreign specimens, an appropriation of synonymes is, at least, doubtful. Some authors have even considered the Vendisse of Lochmaber as the same with the Powan of Perthshire, the *schelly* of Ulswater, the *gwyniad* of Wales, and the Pollan of Ireland; but it will be found that this is not the case; and, from recent observation, there is now reason to believe that the Pollan of Ireland is distinct from the two species of Coregonus found in Great Britain. The *gwyniad* of Wales were very common in Llyn Tegid (Fair Lake) at Bala until the year 1803, when pike were put into the lake, which have very much reduced their number. ... The *gwyniad* is very numerous in Ulswater and other large lakes in Cumberland, where, on account of its large scales, it is called the *schelly*. ... The poorer classes ... consider and even call them the Fresh-water herring. ... The fish is not unlike a herring in appearance, and the Welsh term *gwyniad* has reference to their silvery white colour.—*Yarrell, British Fishes.*

Gymnásium. *s.* [Gr. *γυμνάσιον*; from *γυμνὸς* = naked.] Formerly a place for athletic exercises, in which such as practised them were wholly or nearly naked; any place of exercise; school.

In our universities, Cambridge and Oxford; ... where the worst college is more sight-worthy than the best Dutch *gymnasium.*—*Fuller, Holy State*, p. 149: 1648.

The word *gymnasium* does properly signify the place where people exercise themselves when stripped.—*Grew, Cosmologia Sacra.*

It is to him [the Marquis Wielopolski] that the re-establishment of the Warsaw University and the increase of the number of *gymnasiums* in the kingdom of Poland from five to thirteen, and the introduction of publicity in law proceedings, are due.—*S. Edwards, Polish Captivity*, vol. ii. ch. i.

Let us straight advance in quest
Of this profound *gymnosophist.*
Butler, Hudibras, pt. ii. canto iii.

'How can any man complain of hunger,' said Peter, 'in a country where such excellent sallads are to be gathered in almost every field? or of thirst, where every river and stream produces such delicious potations? And as for cold and nakedness, they are evils introduced by luxury and custom. A man naturally wants cloaths no more than a horse or any other animal, and there are whole nations who go without them; but these are things, perhaps, which you, who do not know the world'—'You will pardon me, sir,' returned Adams, 'I have read of the *gymnosophists.*'—'A plague of your jehosophats!' cried Peter.—*Fielding, Adventures of Joseph Andrews.*

Alexander ... at Corinth, ... found Diogenes living in habits of simplicity not unworthy of the eastern *gymnosophists*, as the Greeks called the sages who exposed themselves almost naked to the inclemency of the Indian sky.—*Bishop Thirlwall, History of Greece*, ch. liii.

Gýnarchy. *s.* [Gr. *γυνή* = woman, and *ἀρχή* = government.] Female government. See Gynecocracy.

I have always some hopes of change under a *gunarchy.*—*Lord Chesterfield.*

Gynécian. *adj.* Relating to women.

Modern physicians prescribe fasting and abstinence to all melancholy lovers: as likewise do all *gynæcian* writers to women.—*Ferrand, Love Melancholy*, p. 33: 1640.

Gynecócracy. *s.* [Gr. *κράτος* = strength, authority: as the root is *γυναικ-*, this, notwithstanding the extracts, is the only true form.] Rule of a woman: (in politics chiefly applied to those countries where the succession to the crown is limited by the Salic law to males; in *colloquial* language used for petticoat government).

Becanus undertakes a conjecture of the first cause which excluded *gynæocracy* among them [the French].—*Selden, On Drayton's Polyolbion.*

The French exclude *gunocracy*, or the government in chief by women.—*Biographiana*, p. 76.

Gypseous alabaster may be readily distinguished from the marbles, ... it does not effervesce with acids, and is soft enough to be scratched by the nail.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Gypsíne. *adj.* Same as Gypseous, the latter being the commoner word.

Gypsine stone [is] a name given by some writers to the gypsum, or fossil substance, of which the powder, called plaster of Paris, is made by calcination.—*Chambers.*

Gýpsum. *s.* [Lat.] Plaster of Paris; native sulphate of lime.

Gypsum is found in very large quantities in many parts of the globe, forming extensive chains of mountains and hills, as in the neighbourhood of Paris.—*Chambers, Cyclopædia.*

Gypsum ... this manure was discovered by Mr. Mayer, a German clergyman of uncommon merit, in the year 1768: it has since been applied with signal success in Germany, Switzerland, France, and America.—*Kirwan, On Manures*, p. 93.

The plaster stone of the Paris basin contains about 12 per cent. of carbonate of lime. This body, ground and mixed with water, forms an adhesive mortar much used in building, as it fixes very speedily. Works executed with pure *gypsum* never become so hard as those made with the calcareous kind; and hence it might be proper to add a certain portion of white slaked lime to our calcined *gypsum*, in order to give the stucco this valuable property. Coloured stuccos of great solidity are made by adding to a clear solution of glue any desired colouring tincture, and mixing-in the proper quantity of the calcined calcareous *gypsum*. The compact, fine-grained gypseous alabaster is often cut into various ornamental figures, such as vases, statuary groups, &c., which take a high polish and look beautiful; but from their softness are easily injured, and require to be kept enclosed within a glass shade.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Gyrátion. *s.* Act of turning anything about.

This effluvium attenuateth and impelleth the neighbour air, which returning home, in a *gyration*, carrieth with it the obvious bodies into the electrick.—*Sir T. Browne.*

If a burning coal be nimbly moved round in a circle with *gyrations*, continually repeated, the whole circle will appear like fire; the reason of which is, that the sensation of the coal in the several places of that circle remains impressed on the sensorium, until the coal return again to the same place.—*Sir I. Newton, On Opticks.*

Gyre. *s.* [Lat. *gyrus* = circle, rotatory movement, wheel.] Circle described by anything moving in an orbit.

Ne thenceforth his approved skill to ward,
Or strike, or hurlen round in warlike *gyre*,
Remember'd he; ne car'd for his safe guard,
But rudely rag'd. *Spenser, Faerie Queen.*

Does the wild haggard tow'r into the sky,
And to the south by thy direction fly?
Or eagle in her *gyres* the clouds embrace? *Sandys.*

He fashion'd those harmonious orbs, that roll
In restless *gyres* about the Arctick pole. *Id.*

Quick and more quick he spins in giddy *gyres*,
Then falls, and in much foam his soul expires.
Dryden.

Hah-háh. *Interjection used as a substantive.* [two words.] In *Landscape Gardening*. Sunk fence so called.

Having thus far spoken of the fence, as the necessity for its concealment and the general form of its line are concerned, the poem now enters into a more practical discussion of the various kinds that may be resorted to, and the properest means to render them at once effectual and invisible; and of these, the first that is recommended to our choice is that which is commonly known by the name of the sunk fence; by this the ground which is seen beyond it, provided its manner of cultivation be anything similar, appears so intimately and continuously united with that on which we stand ourselves, that it is almost always with surprise the division is discovered; and hence, as expressive of that passion, it obtained, when first invented, the name of the *ha! ha!* The mode of constructing this is specified, and is as follows:—Dig deep a trench, and to the base of the side from which you look, and which must be perpendicular and fronted with stone, the opposite side must be gently sloped from the level of the soil: the verdure of this slope must be preserved, and the wall which sustains the neighbouring side must be covered on its top also with the green turf, a little raised above the surface of the soil. This is the strongest manner of constructing the sunk fence; but the greatest strength is not in every instance necessary; it may, indeed, be

requisite, in order to restrain the deer, but cattle of a tamer kind will be turned without it; the perpendicularity and the stone front of the nearer bank may, therefore, be here dispensed with, and in their place a slope, and at midway down a row of thorns, defended when young with pointed pales, may be substituted; but this must be kept from surmounting the level of the lawn, and its surface made always parallel to the banks on which it grows.—*Mason, English Garden*, note.

Hábeas corpus. *s.* [Lat. *habeas*, being the second person singular of the present tense in the potential mood of *habeo* (have) = thou mayest have, + *corpus* = body]. Writ so called, from containing these words.

There is no *habeas corpus* from death.—*Sir M. Sandys, Essays*, p. 250: 1634.

Next to personal security, the law of England regards, asserts, and preserves the personal liberty of individuals. This personal liberty consists in the power of locomotion, of changing situation, of removing one's person to whatsoever place one's own inclination may direct, without imprisonment or restraint, unless by due course of law. ... The ... language of the great charter is that no freeman shall be taken or imprisoned, but by the lawful judgment of his equals, or by the law of the land. And many subsequent old statutes expressly direct that no man shall be taken or imprisoned by suggestion or petition to the king or his council, unless it be by legal indictment or the process of the common law. By the Petition of Right, 3 Car. I., it is enacted that no freedman shall be imprisoned or detained without cause shewn, to which he may answer according to law. By 16 Car. I. c. 10, if any person be restrained of his liberty by order or decree of any illegal court, or by command of the king's majesty in person, or by warrant of the council board, or by any of the privy council; he shall, upon demand of his counsel, have a writ of *habeas corpus*, to bring his body before the Court of King's Bench or Common Pleas, who shall then determine whether the cause of his commitment be just, and thereupon do as justice shall appertain. And by 31 Car. II. c. 2, commonly called the *Habeas Corpus* Act, the methods of obtaining this writ are so plainly pointed out and enforced, that so long as this statute remains unimpeached, no subject of England can be long detained in prison, except in those cases in which the law requires and justifies such detainer. And lest the act should be evaded by demanding unreasonable bail ... it is declared, 1 W. & M. st. 2, c. 2, that excessive bail ought not to be required.—*Sir W. Blackstone, Commentaries on the Laws of England*, b. i. ch. i.

The very intention of our *habeas corpus* act, namely, the preservation of the liberties of the subject, absolutely requires that act now to be suspended.—*Addison, Freeholder*, no. 16.

False perceptions, without disease of the organs of sense, ... have been called illusions by some, and *hallucinations* by others. M. Esquirol proposes to confine the latter term to them; and he defines them to be sensations perceived at a time when there are no appropriate external objects to excite them in the organs of sense. ... Darwin supposes that *hallucinations* proceed from inflammation of the origin of the nerves of sensation; and M. Esquirol says that 'the false sensations of those subject to *hallucinations* are images and ideas reproduced by the memory, associated by the imagination, and personified by habit. A person in such a state converts the product of the understanding into a corporeal form; he dreams while he is awake; but in those who dream the ideas which were entertained while awake continue during sleep, whilst he who is in a delirium perfects his dream when waking.' ... Whatever may be the point of organic departure ... of *hallucinations*, they are lively or sad, capable of inspiring sentiments of benevolence, or of arming the hand of the maniac with an instrument of homicide.—*Copland, Dictionary of Practical Medicine.*

A fourth order of salts has been formed by Berzelius, comprising for the most part bi-elementary compounds which consist of a metal on one hand, and of chlorine, iodine, bromine, fluorine, and the radicals of the hydracids on the other.... The reader will at once perceive that these *haloid* salts, as bi-elementary compounds, differ in composition from other salts, and are analogous to oxides and sulphurets. But their characters are essentially those of the oxygen salts. Thus chloride of sodium, or sea-salt, is very similar in its properties to sulphate or nitrate of soda. In the Sixth Book of the Republic, Plato treats of the then existing sciences as the instruments of a philosophical education. Among the most conspicuous of these is astronomy. He there ridicules the notion that astronomy is a sublime science because it makes men look upward. He asserts that the really sublime science is that which makes men look at the realities, which are suggested by the appearances seen in the heavens: namely, the spheres which revolve and carry the luminaries in their revolutions. Now it was no doubt the determined search for such 'realities' as these which gave birth to the Greek astronomy, the first and critical step in the progress of science. Plato, by his exhortations, if not by his suggestions, contributed effectually, as I conceive, to this step in science. In the same manner he requires a science of *harmonics* which shall be free from the defects and inaccuracies which occur in actual instruments. This belief that the universe was full of mathematical relations, and that these were the true objects of scientific research, gave a vigour, largeness of mind, and confidence to the Greek speculators which no more cautious view of the problem of scientific discovery could have supplied. It was well that this advanced guard in the army of discoverers was filled with indomitable courage, boundless hopes, and creative minds.—*Whewell, History of Scientific Ideas*, b. iii. ch. ii.

'First to you I will schawe,
The poyntes of cure al by rawe;
Of potage, *hastery* and bakun mete.'
(Liber Cure Cocorum in Way.)
All from Latin *hasta*, a spear, transferred to the signification of a spit. It is singular that the Dutch should have arrived by a totally different track at so similar a form as *harst*, a roast, *herdsten, harsten*, to roast, apparently from *heerde*, hearth. (Kilian.) —*Wedgwood, Dictionary of English Etymology.*]

Hásty. *adj.*

Hátchet-face. *s.* Ugly face; such, I suppose, as might be hewn out of a block by a hatchet. Such is the sense given by Johnson, and, consequently, that in which he would himself have used it. What Dryden, the authority, meant is less certain. As the etymology will give more senses than one, and as the question is one which can scarcely be settled by authority, the meaning is simply that which the person who uses it attaches to it. The editor's inquiries have led to a view different from Johnson's, i.e. to the notion suggested by *hatchet* being leanness, bonyness, or prominence of the face, and its sense being thin-visaged, or hatchet-*like* rather than hatchet-*hewn.*

Friar.

[illegible] as an auxiliary verb,

In its constructi[illegible] cely be said to re-*have*, though it can sca[illegible] riginal power tain, at the present time, its [illegible] ill, fundaof indicating *possession*, is su[illegible] pect to mentally, the word before us in res[illegible] in the construction of the combinations which it appears. In these the words *have* or *had* are ordinary active, or transitive verbs; the substantive which follows being in the accusative case and governed by it. With this the participle agrees. Hence *have* or *has* denotes *past* time, though it is itself in the present tense. A little consideration will show how this may be. We cannot say that a man has a thing upon which any act has been performed without implying that the time of that act has

gone by, i.e. *I have a letter written, I have a letter as a written thing*, runs easily into *I have written a letter*. A further extension of this view covers even such expressions as *I have been* where the verb is neuter.

He. The personal pronoun for the third person of the masculine gender and the singular number; i.e. pronoun denoting a single male. The original inflexion was complete; *heo* being the nominative feminine, and *hi, heora, heom*, the plural; now superseded by *she, they, their*, and *them*; all of which, though now treated as feminine and plural forms, are wholly different words; i.e. they stand in no etymological or inflexional relation to *He.*

Again, the original neuter was *hi-t*; the *-t* being the *-t* in *tha-t*, and *wha-t*, a true neuter inflexion, though limited to the nominative case. The *genitive* or *possessive* neuter was *his*, i.e. the same as the masculine. Its (see It) is a new form.

Opium loseth some of *his* poisonous quality, if it be vapoured out, mingled with spirit of wine.—*Bacon.*

His and *her*, even when treated as such, are never *adjectives.* They agree with the Latin *ejus*, rather than the Latin *suus.* This is shown by expressions like *her father, his mother*, wherein *her* and *his* agree in gender, not with *mother* and *father*, but with the person whose mother or father is spoken of.

Her is sometimes, though much more rarely, used in a similar combination.

Is death to any *he* that utters them.

Pope, Translation of the Odyssey.

My paper is the Ulysses *his* bow, in which every man of wit or learning may try his strength.—*Addison, Guardian,* no. 98.

The same single letter [*s*] on many occasions does the office of a whole word, and represents the *his* and *her* of our forefathers.—*Id., Spectator,* no. 135.

It is sometimes used as a sign of the genitive case: as 'the man *his* ground,' for 'the man's ground.' It is now rarely thus used, as its use proceeded probably from a false opinion that the *s* formative of the genitive was *his* contracted.—*Dr. Johnson.*

The latter instance might have shewn him, how groundless this notion is. for it is not easy to conceive, how the letter *s* added to a feminine noun should represent the word *her*, any more than it should the word *their* added to a plural noun; as, 'the *children's* bread.' But the direct derivation of this case from the Saxon genitive case is sufficient of itself to decide this matter.—*Lowth, Introduction to English Grammar.*

Since the remarks on this use of *his* by Addison, Johnson, and Lowth, much has been written on the subject; the fact of the *'s* in *hi's* being not only the *s* in *father's, mother's*, and the substantives in general, but also the *s* of *πατέρο-ς, patri-s*, &c., in other words of the Latin, Greek, Slavonic, and Sanskrit genitive case, being conclusive in favour of the view taken by Lowth. Still, the other doctrine has found, and still finds, favourers; not, perhaps, as a general rule, but as favouring certain instances; indeed it is difficult to deny that such an expression as *the father—his son*, is either as an ellipsis, or by some other figure of speech, justifiable. The evidence, however, of the *h* and *i* having been lost, and the contraction into a simple *'s* having taken place, is wanting; indeed the actual process seems to have been the very reverse. The forms in *his* are all later than the forms in *'s.*

When the nominative case ends in *-s*, the tendency to confusion is increased. *Telemachus's son* differs from *Telemachus his son* by only a single sound.

Her similarly used.

First making known his lawful claim
In Argentile *her* right,
He warred in Deria, and he won
Bernicia, too, in fight.

   Their ceremonies [of the Moriscoes] and their very games were strictly prohibited. They were to indulge in no amusements which had been practised by their fathers; neither were they to wear such clothes as they had been accustomed to. Heáthenism. *s.* Gentilism; paganism.
It signifies the acknowledgement of the true God, in opposition to *heathenism.—Hammond.*
Adams asked him what stuff that was he repeated? To which he answered, they were some lines he had gotten by heart out of a play.—'Ay, there is nothing but *heathenism* to be learned from plays,' reply'd he—'I never heard of any plays fit for a Christian to read, but Cato and the Conscious Lovers; and I must own in the latter there are some things almost solemn enough for a sermon.'—*Fielding, The Adventures of Joseph Andrews.*
The towns were more immediately under the direct influence of the government, which at that time had embraced Christianity. From this casual coincidence, the word Paganus carried with it, and began more and more steadily to suggest, the idea of a worshipper of the ancient divinities; until at length it suggested that idea so forcibly, that people who did not desire to suggest the idea avoided using the word. But when Paganus had come to connote *heathenism*, the very unimportant circumstance, with reference to that fact, of the place of residence, was soon disregarded in the employment of the word. As there was seldom any occasion for making separate assertions respecting *heathens* who lived in the country, there was no need for a separate word to denote them; and pagan came not only to mean *heathen*, but to mean that exclusively.—*J. S. Mill, System of Logic*, b. iv. ch. v. § 2.

Heáthenize. *v. a.* Render heathen.

Heather-bell. *s.* In Scotch this is a common word. In the ordinary English, however, it prevails in the abbreviated and catachrestic form *harebell.* This has nothing to do with *hares*, but is simply *ha'er-bell*, with the elision of the *th* or *d* (*heder* and *hedder* being other forms) between the two vowels, a process which in the Danish language is almost universal; *sadel, fader*, &c., being sounded *sa'el, fa'er*, &c. The derivation of the word being ascertained, the doubt as to its true application is removed. Two well-known plants are called *harebells.* To go no farther than the last edition of Sowerby's 'British Wildflowers,' we find the following entries:

'1. Campanula rotundifolia, blue-bell, *hair*-bell.
'2. Hyacinthus non-scriptus, wild-hyacinth, *hare*-bell.'

If the years had been counted from the beginning of this great year, there could have been no doubt when it came to an end, as from the want of a leap-year the new-year's day must have been always moving one day in four years; but no satisfactory reckoning of the years had been kept, as to the end of the period. —*Sharpe, History of Egypt.*

Heliocéntric. *adj.* Having the sun as a centre.

The *heliocentrick* place of a planet is said to be such as it would appear to us from the sun, if our eye were fixed in its centre.—*Harris.*

We by no means find, even in those practical discoverers to whom, in reality, the revolution in science, and consequently in the philosophy of science, was due, this prompt and vigorous recognition of the supreme authority of observation as a ground of belief; this bold estimate of the probable worthlessness of traditional knowledge; and this plain assertion of the reality of theory founded upon experience. Among such discoverers, Copernicus must ever hold a most distinguished place. The *heliocentric* theory of the universe, established by him with vast labour and deep knowledge, was, for the succeeding century, the field of discipline and exertion of all the most active and speculative minds. Men, during that time, proved their freedom of thought, their hopeful spirit, and their comprehensive view, by adopting, inculcating, and following out the philosophy which this theory suggested. But in the first promulgation of the theory, in the works of Copernicus himself, we find a far more cautious and reserved temper. He does not, indeed, give up the reality of his theory, but he expresses himself so as to avoid shocking those who might (as some afterwards did) think it safe to speak of it as an hypothesis rather than a truth.—*Whewell, On the Philosophy of Discovery.*

See also Geocentric; the two words being opposed to one another.

The roses, the mignonette, the *heliotropes*, all combined their fragrance to refresh the air, and, although from its proximity to the high-way, Hull's servant had to brush the plants as he did his coat every morning, to get rid of the dust, it was what the most fastidious critic must have pronounced a delightful little place. — *Theodore Hook, Gilbert Gurney.*

2. Precious stone, of a green colour, streaked with red veins.

They sell . . . agats, turquoises, *heliotropes*, cornelians.—*Sir T. Herbert, Relation of some Year's Travels into Africa and the Great Asia*, p. 44.

The *helispherical* line is the rhomb line in navigation, and is so called because on the globe it winds round the pole spirally, and still comes nearer and nearer to it, but cannot terminate in it.—*Harris.*

At midnight, he had lost forty-eight thousand pounds. Affairs now began to be serious. . . . On they played, and the Duke lost more. . . . Dryden, Theodore and Honoria, 142.

Against your Protestant brethren: to lay waste their country, to desolate their dwellings, and extirpate their race and name with these horrible *hell-hounds* of savage war—*hell-hounds*, I say, of savage war. Spain armed herself with bloodhounds to extirpate the wretched natives of America, and we improve on the inhuman example of even Spanish cruelty: we turn loose these savage *hell-hounds* against our brethren and countrymen in America, of the same language, laws, liberties, and religion, endeared to us by every tie that should sanctify humanity. My lords, this awful subject, so important to our honour, our constitution, and our religion, demands the most solemn and effectual inquiry; and I again call upon your lordships, and the united powers of the state, to examine it thoroughly and decisively, and to stamp upon it an indelible stigma of the public abhorrence.—*Brougham, Historical Sketches of Statesmen of the Reign of George III., Lord Chatham.*

Hélmwind. *s.* Kind of wind so called. See extract.

In these mountains [of Westmoreland], towards the north-east part of the county, is a very remarkable phenomenon, such as we have not found any account of elsewhere in the kingdom, except only about Ingleton, and other places bordering upon the mountains of Ingleborrow, Pendle, and Penigent, in the confines of the counties of York and Lancaster. It is called a *helmwind*. A rolling cloud, sometimes for three or four days together, hovers over the mountain tops, the sky being clear in other parts. When this cloud appears, the country people say, the *helm* is up: which is an Anglo-Saxon word signifying properly a covering for the head. This helm is not dispersed or blown away by the wind, but continues in its station, although a violent roaring hurricane comes tumbling down the mountain, ready to tear up all before it. Then on a sudden ensues a profound calm. And then again alternately the tempest; which seldom extends into the country above a mile or two from the bottom of the mountain.—*Burn and Nicholson, History of Westmoreland and Cumberland*, i. 7.

Hélotry. *s.* Body of Helots, or Helotlike bondsmen.

'How is it,' said I, 'that every thing which is connected with manufactures presents such features of unqualified deformity? From the largest of Mammon's temples down to the poorest hovel in which his *helotry* are stalled, these edifices have all one character. Time will not mellow them; nature will neither clothe nor conceal them; and they will remain always as offensive to the eye as to the mind.'—*Southey, Colloquies on Society.*

The *helotry* of Mammon are not, in our day, so easily enforced to content themselves as the peasantry of that happy period, as Mr. Southey considers it, which elapsed between the fall of the feudal and the rise of the commercial tyranny.—*Macaulay, Critical and Historical Essays, Southey's Colloquies on Society.*

Hematémesis. *s.* [Gr. αἷμα, -ατος = blood + ἔμεσις = vomiting.] Vomiting of blood.

The blood may proceed from the mucous surface of the stomach, which is most commonly the case; and from the surface of the duodenum, or of the œsophagus. It may proceed, also, from the rupture of an aneurismal tumour which has poured its blood either directly or mediately into the stomach; and it may be simulated by the blood passing from the posterior nares or throat, or from the respiratory organs, into the stomach, and being afterwards vomited. *Hæmatemesis* is attended with almost every grade of vascular action, from the lowest state of sub-action, to the most acute action; but more frequently the vascular system is deficient of vital tone, and this condition is extended, more or less, to all the soft solids of the frame. In a very great number of cases, also, we observe a state either of general cachexia, or of congestion and morbid function, or morbid structure, of more than one of the abdominal viscera.... *Hæmatemesis* is, more commonly than is generally stated by authors, a mode of termination, or a consequence, of inflammation, or of inflammatory irritation and congestion of the internal tunics of the stomach and duodenum, when it presents signs of sthenic action, or is preceded by cardialgia, acute pain, tenderness, distention, and a sense of heat in the region of this organ, or when it occurs in young plethoric subjects, and is caused by ingurgitation, by acrid matters received into the stomach, by the use of inebriating fluids, and by the suppression of accustomed discharges. In this inflammatory form of the disease, the blood thrown from the stomach is seldom in large quantity at one time, although frequently ejected, and is of less deep colour than in some other varieties; and that taken by venesection is usually cupped and buffed. The pathology of the disease will be further illustrated by the following observations on the subject, and in which I shall notice—first, the primary and less complicated state of *hæmatemesis*; secondly, the supplemental, succedaneous, or vicarious forms of this disease; thirdly, *hæmatemesis* from disease of the viscera connected with the stomach; fourthly, hæmorrhage from certain organic lesions of the stomach, or of its vessels, and from complications with other diseases; and lastly, that rarer form of *hæmatemesis*, which, from the colour of the ejected fluid, has been called the morbus niger.—*Copland, Dictionary of Practical Medicine.*

Hémicrania. *s.* [Gr. ἡμι = half, κρανίον = skull.] See Megrim, for which it is the medical term; also the word out of which the popular name is a corruption.

Night would invade.

The sun is more powerful in the northern *hemisphere*, and in the apogeum; for therein his motion is slower.—*Sir T. Browne.*

Until the earth seems join'd unto the sky;
So in this *hemisphere* our utmost view
Is only bounded by our king and you. *Dryden.*

2. In *Anatomy*. Side of the convoluted part of the brain.

Influenced by the inapplicability of the term '*hemispheres*' to parts which are more commonly spheres or spheroids, and to avoid misconception by those who attach to the word 'cerebrum' the idea of the whole brain minus 'cerebellum' and 'medulla oblongata,' or who may restrict the term 'cerebral *hemispheres*' to the super-imposed masses of the lateral ventricles in higher vertebrata, I shall apply the term 'prosencephalon' to the constant division of the brain in question, and prosencephalic lobes or prosencephala to its commonly distinct moieties. It is unfortunate for the student of anatomy that, in his introduction to the science by the human structure, he should become acquainted with these parts of the brain under the name of '*hemispheres*,' as if they were two halves of an essentially spherical whole or single organ.—*Owen, Lectures on Comparative Anatomy*, lect. viii. note.

Hemisphéric. *adj.* Half round; containing half a globe.

A pyrites, placed in the cavity of another of an *hemispherick* figure, in much the same manner as an acorn in its cup.—*Woodward, On Fossils.*

He broke off in the *hemistick*, or midst of the verse; but, seized as it were with a divine fury, he made up the latter part of the *hemistick*.—*Dryden, Translation of Du Fresnoy's Art of Painting.*

The method of writing parallel *hemisticks* in opposite columns... may sometimes have caused a transposition of whole lines.—*Archbishop Newcome, Essay on a Translation of the Bible*, p. 248.

Hemístichal. *adj.* Denoting, consisting in, constituted by a hemistich.

The reader will observe the constant return of the *hemistichal* point, which I have been careful to preserve; ... as I suspect, that it shews how these poems were sung to the harp by the minstrels.—*T. Warton, History of English Poetry*, addition to vol. i.

The *hemistichal* division is not exhibited to the eye in the printed page.—*Bishop Horsley, Translation of Hosea*, p. 43.

Hémlock. *s.* [A.S. *hemleac*.] Native umbelliferous and poisonous plant so called; Conium maculatum.

The leaves are cut into many minute segments: the petals of the flower are bifid, heart-shaped, and unequal: the flower is succeeded by two short channelled seeds. One sort is sometimes used in medicine, though it is noxious; but the *hemlock* of the ancients, which was such deadly poison, is generally supposed different.—*Miller.*

We cannot with certainty affirm, that no man can be nourished by wood or stones, or that all men will be poisoned by *hemlock*.—*Locke.*

Hemóptysis. *s.* [Gr. πτύσις = spitting; πτύω = spit.] Spitting of blood.

Having fulfilled the first intention, the arrest of the *hæmoptysis*, attention should immediately afterwards be directed to the removal of any blood that may have been collected in the bronchi, and of whatever inflammatory irritation connected with it, either coetaneously or consecutively, that may exist.... With this intention, also, as well as to prevent the return of the hæmorrhage, the assiduous adoption of external irritants, and the internal use of the balsams or terebinthinates will prove most serviceable. At the same time, the digestive and excreting functions ought to receive due attention.... The inhalation of watery or medicated vapours has been recommended in *hæmoptysis*, and lately employed by both rational and empirical practioners. The practice requires much caution; but I think it will be found often of service if discrimination as well as perseverance be observed in respect to it. Towards the decline, or in the slighter forms of *hæmoptysis*, the more astringent substances may be used in this way, care being taken that they neither occasion irritation or tightness in the thorax, nor excite cough.... The regimen during and after *hæmoptysis* is a most important part of the treatment. The ancients advised cooling beverages and diet. They allowed acid wine, and acerb or acid fruits. The pomegranate was much and deservedly praised by them, on account of its cooling and astringent operation. Glutinous and mucilaginous articles of diet were also recommended.... The remarkable effects observed by Dr. Archibald Smith in persons subject to *hæmoptysis* on their residing in elevated, dry, and temperate situations on the Andes, should suggest the adoption of residences in similar localities.—*Copland, Dictionary of Practical Medicine.*

Hémorrhage. *s.* [Gr. αἷμα = blood + root of ῥήγνυμι = break.] Violent flux of blood.

Twenty days' fasting will not diminish its quantity so much as one great *hemorrhage*.—*Arbuthnot, On the Nature and Choice of Aliments.*

Sources of *hæmorrhage* may take place from the heart, the arteries, the capillaries, or veins, in consequence of disease or of external injury. It may proceed from the capillaries without very obvious lesion, excepting an almost inappreciable dilatation of them. All parts of the body may become the seats of *hæmorrhage*, excepting those which are extremely dense, as the bones, cartilages, ligaments, tendons, &c.; yet it most frequently proceeds from the minute vessels distributed in mucous or serous membranes or in the parenchyma of organs.... In a great majority of instances, *hæmorrhage* is merely a symptom, contingent upon a variety of affections, the primary ailment being chiefly important to the physician. If we enter into an analysis of the pathological relations of *hæmorrhage*, we shall find that, in comparatively few cases, are they strictly primary or idiopathic; and that they may be referred to four general heads; namely—1st. To the states of organic nervous power or vital action;—2nd. To the state of structure which the *hæmorrhage* takes place;—3rd. To the state of the circulating organs and vessels;—4th. To the conditions of the blood;—and, 5th. To any two or more of these conjoined.—*Copland, Dictionary of Practical Medicine.*

Hemórrhagic. *s.* Consisting of, constituted by, a hemorrhage.

The frequency of hæmorrhages, especially their more active states, is greater in the sanguineous, the irritable, or the sanguineo-bilious temperaments, in plethoric constitutions, and in the scrofulous diathesis. They are more common and abundant towards the completion of youth, than at any other period; and they are comparatively rare in infancy and in old age. Females are more subject to them than males. There may be said to be a *hæmorrhagic* diathesis; inasmuch as hæmorrhages are more common in the offspring of parents who have experienced attacks than in others, and as they are often observed in several children or members of the same family.—*Copland, Dictionary of Practical Medicine.*

Hémorrhagy. *s.* Same as Hemorrhage.

Great *hæmorrhagy* succeeds the separation. *Ray.*

Of leeches, spouting *hemorrhoidal* blood. *Garth.*

Hemp. *s.* [A.S. *hæmp*; Lat. *cannabis*.] Plant so called of the genus Cannabis.

It hath digitated leaves opposite to one another: the flowers have no visible petals; it is male and female in different plants. Its bark is useful for cordage and cloth.—*Miller.*

And let not *hemp* his windpipe suffocate.

Gay, The Shepherd's Week, Thursday.

Hémpweed. *s.* Native plant so called; called also hemp agrimony; Eupatorium cannabinum.

The *hempweed* or hemp agrimony, a common plant enough, was curiously recognised some time ago by some bushmen from South Africa, who happened to be in Guernsey, as the material from which they obtained an intoxicating substance for smoking.—*Austed, The Channel Islands*, p. 178.

My Flora was my sun; for as
One sun, so but one Flora was:
All other faces borrow'd *hence*
Their light and grace, as stars do thence.
Sir J. Suckling.

7 *From hence* is an exceptionable expression, which crept into use even among good authors, as the original force of the word *hence* was gradually forgotten.

An ancient author prophesy'd *from hence*,
Behold on Latian shores a foreign prince!
Dryden, Translation of the Æneid, vii. 103.

Used as a *verb*, meaning send *hence*, or off; dispatch to a distance. *Rare.*

By kings, and all the rabble world obeyed;
Here humble monarch at his feet kneeled down,
And begged the alms, and charity of a crown;
There, when in solemn state he pleased to ride,
Poor sceptred slaves ran *henchboys* by his side;
None, though in thought, his grandeur durst blaspheme,
Nor in their very sleep a treason dream.
Oldham, Satires upon the Jesuits.

Hendíadys. *s.* [Gr. ἓν = one + διὰ = two = δύο = two, couple.] Rhetorical figure, when two noun substantives are used instead of a substantive and adjective; *e. g.* the *strength of Hercules* (βίη Ἡρακλείη), instead of *the strong Hercules*, or *Hercules the strong.* Scarcely a naturalized word, the Greek being the language wherein the figure is commonest, and the word being rather Greek than English. Even in Greek, ἓν διὰ δυοῖν = one through two, is the commoner term.

Héndriver. *s.* Kind of hawk; hen-harrier.

The *hen-driver* I forbear to name.—*I. Walton, Complete Angler.*

Hénharrier. *s.* [*harrier*, i.e. harasser or enemy of hens (poultry). 'Nearly synonymous with Hen-driver; also with the rarer term *Hen-harm'.*] Hawk so called of the genus Circus.

The marsh-*harrier* (Circus æruginosus). . . . is distinguished from the true buzzards by the more elongated and slender form of their bodies, their lengthened, taper, and naked legs, the still greater softness of their plumage, and by the circular disk of short feathers which surround the face. . . . The decided difference in colour between the males and females of the true *harriers* when adult is a subject now so generally understood as to require to be noticed here only as a prominent illustration of one of the laws which appear to influence the assumption and changes of plumage in birds. . . . In the present instance, the old male, from his almost uniform ash-grey colour as seen in the figure, is called provincially the dove hawk, and blue hawk, and by the more general name of the *hen-harrier.* The female, called a ringtail, is brown.—*Yarrell, British Birds, Marsh and Hen Harrier.*

Hénhearted. *adj.* Dastardly; cowardly; like a hen.

One puling *hen-hearted* rogue is sometimes the ruin of a set.—*Gayton, Notes on Don Quixote*, p. 119.

Who rules my *hen-peck'd* sire, and orders me.
Dryden, Translation of the Eclogues, iii. 48.

The neighbours reported that he was *hen-peck'd*, which was impossible, by such a mild-spirited woman as his wife.—*Arbuthnot.*

Hénroost. *s.* Place where the poultry roost.

Many a poor devil stands to a whipping-post for the pilfering of a silver spoon, or the robbing of a *hen-roost.*—*Sir R. L'Estrange.*

Her house is frequented by a company of rogues, whom she encourageth to rob his *hen-roosts.*—*Swift.*

If a man prosecutes gipsies with severity, his *hen-roost* is sure to pay for it.—*Addison.*

The *hen-roosts* of some peaceful village.

Hens-foot [is] a mere translation of [the] Latin *pes pulli*, a name that Stapel . . . says was given it from the resemblance of its leaves to a hen's claw, an observation which he must have made on a bad picture.—*Dr. Prior, Popular Names of British Plants.*

The cystick gall is thick, and intensely bitter; the *hepatick* gall is more fluid, and not so bitter.—*Arbuthnot, On the Nature and Choice of Aliments.*

The molecular movements and changes in the organs of vegetative life constitute a more uninterrmitting source of caloric. The blood which returns from the extensive seat of such operations afforded by the mucous intestinal tract is warmer than before it enters that tract: the blood of the *hepatic* vein after its passage through the portal circulation, and its work in the liver, shows a more marked rise of temperature. Urine in mammals, before its escape, is hotter than blood; and the rich supply of nerves to the adrenals may relate to the calorific functions of the kidneys.—*Owen, Anatomy of Vertebrates.*

Héptachord. *s.* [Gr. ἑπτὰ = seven + χόρδη = chord.] Anciently, a musical instrument of seven strings; as, the lyre; and also a poetical composition played or sung on seven different notes or sounds.

This instrument seems to merit a particular description here, not only from its great antiquity, but from its form; for by having been furnished with a neck, though it had but two strings it was capable of producing from them a number of notes; for instance if these two strings were tuned fourths to each other, they would furnish that series of sounds which the ancients called a *heptachord*, consisting of two conjunct tetrachords.—*Burney, History of Music, Ægyptian Music.*

3. Blazonry.

Metals may blazon common beauties; she
Makes pearls and planets humble *heraldry.*
Cleaveland.

And has poetry no end, no eternal and immutable principles? Is poetry, like *heraldry,* mere matter of arbitrary regulation? The heralds tell us that certain scutcheons and bearings denote certain conditions, and that to put colours on colours, or metals on metals, is false blazonry. If all this were reversed, if every coat of arms in Europe were new fashioned, if it were decreed that or should never be placed but on argent, or argent but on or, that illegitimacy should be denoted by a lozenge, and widowhood by a bend, the new science would be just as good as the old science, because both the new and the old would be good for nothing. The mummery of Porteullis and Rouge Dragon, as it has no other value than that which caprice has assigned to it, may well submit to any laws which caprice may impose on it. But it is not so with that great imitative art, to the power of which all ages, the rudest and the most enlightened, bear witness.—*Macaulay, Critical and Historical Essays, Life of Lord Byron.*

Héraldship. *s.* Office, condition, or rank of an herald.

Herborizátion. *s.* Appearance of plants in fossils.

Mr. Daubenton gives an account of three different kinds of *herborizations.* The first, amongst which are those found on agats, are owing to parts of real plants.... The neighbouring hill, and drive them to the shore.
Addison.

[*Herd.* A troop of cattle or the person who takes care of them, in both of which senses *herde* was used in Old German, Frisian, &c. (Killian); German, *hirt,* a herdsman, used in composition, as *herd* in English, *shepherd, cowherd,* &c. *Hirten,* to herd cattle. Probably the *herd* of cattle is named from the act of *herding,* and not vice versâ. Old Norse, *hirdir,* keep, guard; *hirdingi,* a shepherd; *hiörd.* a herd of cattle. French, *harde, hourde,* a herd of deer (Cotgrave). The name of a herd of cattle is common taken from the act of driving, and that again from a representation of the cries used in setting on a dog which performs by far the greater part of shepherd's work. We speak in English of a *drove* of cattle, from *drive,* as Greek ἀγέλη, a herd, from ἄγω, to drive. Magyar, *haitani,* to drive, signifies also to pasture cattle, and thence *háitsar,* a shepherd.... On the other hand, a plausible explanation may be found in the point of view which regards the penning of the flock as the most important part of the shepherd's care, while the fencing most generally resorted to for the purpose would be that composed of hurdles or wattled branches. The office of the shepherd then naturally be named from German *hürde,* a hurdle or wattled fence, *schafhurde,* a sheep-fold. *Schafe in die hürden thun,* to fold sheep. At a much later period of history we find wattled work employed as a defence in the siege of cities, and the root *hurd* is again connected with the ideas of care and safety.

I do not remember where ever God delivered his oracles by the multitude, or nature truths by the *herd.*—*Locke.*

Every man has remarked the indirect methods made use of in the pursuit of wealth, in pursuit for the most part prompted by pride: for to what end is an ample fortune generally coveted? Not that the possessor may have it in his power to relieve distress, or recompense virtue; but that he may distinguish himself from the *herd* of mankind, by expensive vices, foreign luxuries, and a pompous equipage.—*Johnson, Sermons,* no. 6, p. 112. (Ord MS.)

Heredípety. *s.* [Lat. *heres, heredis* = heir; *peto* = seek.] Legacy-hunting.

The prodigality of the offerings to the church and to the clergy, those more especially by bequest, is so immoderate, that a law is necessary to restrain the profuseness on one hand, and the avidity on the other, a law which the statesman Ambrose and the Monk Jerome approve, as demanded by the abuses of the times. 'Priests of idols, mimes, charioteers, harlots may receive bequests; it is interdicted, and wisely interdicted, only to ecclesiastics and monks.' The Church may already seem to have taken the place of the Emperor as universal legatee. As men before bought by this posthumous adulation the favour of Cæsar, so would they now that of God. *Heredipety*, or legacy-hunting, is inveighed against, in the clergy especially, as by the older Satirists.—*Milman, History of Latin Christianity*, b i. ch. xi.

Herédity. *s.* [Lat. *heres* = heir, and, in a secondary sense, descendant generally.] Hereditary transmission.

Already, in the last two chapters, the law of hereditary transmission has been tacitly assumed. . . . Understood in its entirety, the law is, that each plant or animal produces others of like kind with itself . . . That wheat produces wheat—that existing oxen have descended from ancestral oxen—that every unfolding organism eventually takes the form of the class, order, genus, and species from which it sprang; is a fact which, by force of repetition, has acquired in our minds almost the aspect of a necessity. It is in this, however, that *Heredity* is principally displayed: the phenomena commonly referred to it being quite subordinate manifestations. And, as thus understood, *Heredity* is universal. . . . While, however, the general truth that organisms of a given type uniformly descend from organisms of the same type, is so well established by infinite illustrations as to have assumed the character of an axiom; it is not universally admitted that non-typical peculiarities are inherited. . . . Some naturalists seem to entertain a vague belief, that the law of *Heredity* applies only to main characters of structure, and not to details; or, at any rate, that though it applies to such details as constitute differences of species, it does not apply to smaller details. The circumstance that the tendency to repetition is in a slight degree qualified by the tendency to variation (which, as we shall hereafter see, is but an indirect result of the tendency to repetition), leads some to doubt whether *Heredity* is unlimited. A careful weighing of the evidence, however, and a due allowance for the influences by which the minuter manifestations of *Heredity* are obscured, will remove the grounds for this scepticism.—*H. Spenser, Induction of Biology.*

Héresiarch. *s.* Head or founder of a heresy.

The Pope declared him not only an heretick, but an *heresiarch*.—*Bishop Stillingfleet.*

The reformation of the Church, in its head and in all its members, was among the avowed objects, it was the special function, of the Council [of Constance]; the maintenance of the unity of the Church against formidable *heresiarchs*; the suppression of heresies, which had ceased to be those of rebellious sects, had become those of rebellious nations. In Constance would be seen of the monarchs of Christendom perhaps one only, but he the greatest, the Emperor. . . . There might be three Pontiffs, each of whom had worn, each boasted himself the rightful wearer of the Papal tiara. There would certainly be the whole College of Cardinals; the most famous and learned churchmen from every kingdom of the West; even those dreaded *heresiarchs*, the heirs and successors of the English Wycliffe, who had nearly severed the kingdom of Bohemia from Latin Christendom.—*Milman, History of Latin Christianity*, bk. xiii. ch. viii.

Upon this occasion, I cannot but take notice that of all the *heresies* in politics profusely scattered by the partisans of the late administration, none ever displeased me more, or seemed to have more dangerous consequences to monarchy, than that pernicious talent, so much affected, of discovering a contempt for birth, family, and ancient nobility.—*Swift, Examiner*, no. 41. Hérpes. *s.* [Latin and Greek.] Skin disease so called.

Herpes [is] a cutaneous inflammation of two kinds: miliaris, or pustularis, which is like millet-seed upon the skin; and exedens, which is more corrosive and penetrating, so as to form little ulcers. —*Quincy.*

A farther progress towards acrimony maketh a *herpes*; and, if the access of acrimony be very great, it maketh an *herpes* exedens.—*Wiseman, Surgery.*

Herpetic eruptions consist in an eruption of vesicles, in distinct irregular clusters, upon inflamed bases which extend somewhat beyond the margin of each cluster; attended by tingling, concreting into lamellar scabs, and not contagious. It is an inflammatory affection, chiefly of the vascular rete of the skin, causing the effusion of a thin fluid, which elevates the cuticle into groups of small vesicles. This affection occurs generally in circumscribed patches, the skin retaining its natural aspect in the intervals; passes through a regular course of increase, maturation, and decline; and terminates usually in from ten to fifteen days, but is sometimes prolonged to twenty-one days. It is frequently preceded by constitutional disorder, and is sometimes critical of other diseases. The vesicles are filled at first with a colourless and clear fluid, which gradually becomes milky and opaque, and ultimately concretes into thin scabs; but occasionally a discharge of it takes place, and ulcerations follow. Tingling or pricking pains sometimes attend the eruption. In some cases, as the crusts fall off in one part, fresh vesicles arise in the vicinity, and the eruption thus creeps over a large portion of the surface and its duration is thereby prolonged. There are several species of this disease.... This species of *herpes* is generally preceded by disorder of the digestive organs, and by slight febrile disturbance. It usually assumes an acute form, terminating within three weeks, but it sometimes becomes chronic.—*Copland, Dictionary of Practical Medicine.*

Finally, when we remember how rapidly analogous modifications of function and structure arise in the superficial tissues of individual plants, the general inference can scarcely be resisted. When we meet with so striking a case as that of the Begonia-leaf, a fragment of which stuck in the ground produces roots from its under surface and leaves from its upper surface . . . the presumption becomes extremely strong that the *heterogeneities* of surface which we have considered, result, as alleged, directly or indirectly, from *heterogeneities* in the incident forces.—*Herbert Spencer.*

Again, laws which were themselves generated in the second mode, may generate others in the first. Though there be laws which, like those of chemistry and physiology, owe their existence to a breach of the principle of composition of causes, it does not follow that these peculiar, or, as they might be termed, *heteropathic* laws, are not capable of composition with one another. The causes which by one combination have had their laws altered, may carry their new laws with them unaltered into their ulterior combinations. And hence there is no reason to despair of ultimately raising chemistry and physiology to the condition of deductive sciences; for though it is impossible to deduce all chemical and physiological truths from the laws or properties of simple substances or elementary agents, they may possibly be deducible from laws which commence when these elementary agents are brought together into some moderate number of not very complex combinations.—*J. S. Mill, System of Logic*, b. iii. ch. vi. § 2.

A temple of Serapis, which had lately been built at Canassus, was dedicated to the god in the name of the Emperor Commodus; and there some of the grosser superstitions of the polytheists fled before the spread of Christianity and Platonism in Alexandria. The sculptures on the beautiful temples of Contra-Latopolis were also finished in this reign and the emperor's names and titles were carved on the walls in *hieroglyphics* with those of the Ptolemies, under whom the temple itself had been built Commodus may perhaps not have been the last emperor whose names and praises were carved in *hieroglyphics*; but all the great buildings in the Thebaid, which add such value to the early history of Egypt, had ceased before his reign. Other buildings of a less lasting form were no doubt being built, such as the Greek temples at Antinoopolis and Ptolemais which have long since been swept away; but the Egyptian priests, with their gigantic undertakings, their noble plan of working for after ages rather than for themselves, were nearly ruined, and we find no ancient building now standing in Egypt that was raised after the time of the Antonines.—*Sharpe, History of Egypt.*

[*Higre, Eager, Aker.*—The commotion occasionally made in certain rivers by the meeting of the tide and current is known by the foregoing names. *Akyr* of the sea flowynge, impetus maris. (Promptorium Parvulorum.) Taylor the water poet describes the phenomenon on the coast of Lincolnshire,

'—the flood runs there with such great force,
That I imagine it outruns a horse;
And with a head some four foot high that rores,
It on the sodaine swells and beats the shores;—
It hath lesse mercy than beare, wolfe, or tyger,
And in those countries it is called the *hyger*.'
(Taylor in Nares.)

Any sudden inundation of the sea is called an *egor*, at Howden in Yorkshire. (Kennet in Halliwell.) The essential meaning seems a swelling of the waters apparently arising from some internal cause.

'Wel know they the remue (French *remuer*, to stir) if it aryse,
An *aker* it is clept, I understonde,
Whose myght there may no shippe or wynd wyt stonde.
This remue in th' occian of propre kynde,
Wytoute wynde hath his commotioun.
(MS. in Way.)

The term is obviously identical with Bavarian *hidl*, *higl*, applied to a rising of the underground water level which has the effect of flooding cellars and low grounds in the neighbourhood of rivers by soakage from beneath. When this occurs they say that *the Hidl rises*, giving the name of *Hidl-waters* to the floods so produced. (Schmeller.) The only character in common to this phenomenon and the English *higre*, is that both consist in a spontaneous swelling or rising of the water, without the action of river floods in the one case or of wind in the other. It is probable then that the origin may be preserved in North Frisian *hieen*, to rise or swell as water, to raise or make higher (Bendsen), although in the Frisian verb the final *g* is lost, which appears in English *high* and *higre*, and in Dutch *hoog*, high.—*Wedgwood, Dictionary of English Etymology.*]

Something shall leave it half an hour behind.

In the development of the skull of osseous fishes it is found, however, that, whilst the central or basilar, the neurapophysial, and the parapophysial elements of the cranial vertebræ are developed out of a pre-existing cartilaginous basis, the modified spinous elements, with the exception of that of the occipital vertebra, are formed by the deposition of the calcareous salts in the epicranial membrane and Dr. Reichert, apparently not remembering that the cartilaginous, or intermediate *histological*

change between the primitive membranous and ultimate osseous stage has been as little recognised in the developement of the epicranial bones of man, would reject the parietal and frontal bones from the system of the endo-skeleton.—*Owen, Lectures on Comparative Anatomy*, lect. vi.

These coats are greatly modified at different parts; and their modifications vary greatly in different animals. In the lower types, where they compose a simple tube, running from end to end of the body, they are almost uniform in their *histological* characters; but on ascending from these types, we find them presenting an increasing variety of minute structures between their two ends. The argument will be adequately enforced if we limit ourselves to the leading modifications they display in some of the higher animals.—*Ibid.*

The form *holly* will have been the more readily adopted, from the branches of this shrub being used for *olive* branches, and strewed before the image of Jesus in certain solemnities of the Church that represented His entrance into Jerusalem. Thus in Googe's Naogeorgus—

'He's e'en the same that, long agone,

The people mette, and *olive* boughs
So thicke before him stroade.'
Dr. Prior, Popular Names of British Plants.

A little higher up the river was a *holm*, which divided it into two branches.—*Vaillant, Travels*, iii. 295.

As many woods are on hills, and many hills are wooded, the interpretation may be true. It is, however, more probable that the true meaning of the word has been misunderstood.

We went, through deserts waste, and forests wild.

Hómologue. *s.* Equivalent in the way of homology.

The roof of the mouth is extended posteriorly by three cartilaginous plates: one single and extending backwards, from the posterior interspace of the palatines; this seems to be the *homologue* of the two median cartilages, called 'palatal' by Dr. Henle, on the roof of the broader mouth of the Narcine.—*Owen, Lectures on Comparative Anatomy,* lect. vi.

Homólogy. *s.* [Gr. λόγος = word, principle.] In *Comparative Anatomy* to the correspondence or equivalence of certain organs, animal or vegetable, to others resembling them in development and relation to the rest of the organism, though not in detail; parts so corresponding being homologous, or the homologues, to one another.

Terms must be constructed so as to be fitted to enunciate general propositions, and terms which imply theoretical views are admissible for this purpose. And hence it happens that the history of terms in any science which has gone through several speculative stages, is really the history of the generalizations and theories which have had currency among the cultivators of the science. This appears in comparative anatomy from what we have been saying. The recent progress of that science is involved in the rise and currency of the terms which have been used by the anatomists whose synonyms Mr. Owen has to discuss; and the reasons for selecting among these, or inventing others, include those truths and generalizations which are the important recent steps of the science. The terms which are given by Mr. Owen in his table to denote the bones of the head are good terms, if they are good terms, because their adoption and use is the only complete way of expressing the truths of *homology*; namely, of that special *homology*, according to which all vertebrate skeletons are referred to the human skeleton as their type, and have their parts designated accordingly. But further: there is another kind of *homology* which Mr. Owen calls general *homology*, according to which the primary type of a vertebrate animal is merely a series of vertebræ; and all limbs and other appendages are only developements of the parts of one or another of the vertebræ. And in order to express this view, and in proportion as the doctrine has become current amongst anatomists, the parts of vertebræ have been described by terms of a degree of generality which admit of such an interpretation. And here, also, Mr. Owen has proposed a terminology for the parts of the vertebræ, which seems to convey more systematically and comprehensively than those of preceding writers the truths to which they have been tending. . . . Besides these doctrines of special *homology* by which the bones of all vertebrates are referred to their corresponding bones in the human skeleton, and of general *homology*, by which the bones are referred to the parts of vertebræ which they represent, Mr. Owen treats of serial *homology*, the recognition of the same elements throughout the series of segments of the same skeleton; as when we shew in what manner the arms correspond to the legs.—*Whewell, Novum Organon Renovatum.*

Only the gradual transmutation of the similarly insignificant 'os mystaceum' in the osseous fishes to its higher form and functions in the Salmonoid and Salamandroid species, could have made the *homology* of this separate bone appreciable in the sturgeon.—*Owen, Lectures on Comparative Anatomy,* lect. vi.

We find, when nature reduces the organs of sight to such minute specks as can give but a feeble idea of the presence of light, sufficient, perhaps, to warn the Amblyopsis to retreat to the darker recesses of its subterranean abode, that the optic lobes are not reduced in the same proportion, but retain a form and size, which, as compared with their homologues in other animals, are sufficiently remarkable to suggest a function over and above that of receiving the impressions of visual spectra, and forming the ideas consequent thereon. The anatomical condition of the prosencephalon, and its *homology* with the hemispheres of the bird's brain experimented on by M. Flourens, would lead to the belief that it was in this division of the fish's brain that impressions become sensations, and that here was the seat of distinct and tenable ideas.—*Ibid.* lect. viii.

Of *honey*, the first and finest kind is virgin *honey*, not very firm, and of a fragrant smell: it is the first produce of the swarm, obtained by draining the combs without pressing. The second is often almost solid, procured by pressure: and the worst is the common yellow *honey*, extracted by heating the combs, and then pressing them. In the flower plants, by certain glands near the basis in the petals is secreted a sweet juice, which the bee, by means its proboscis, or trunk, sucks up and discharg

again from the stomach through the mouth into the comb. The *honey* deposited in the comb is destined for the young offspring; but in hard seasons the bees are reduced to the necessity of feeding on it themselves.—*Sir J. Hill, Materia Medica.*

Numerous and various opinions have been held respecting the pathology of *hooping-cough*, of which, however, we can but give a short summary. Thus it has been imputed to the presence of a subtile and irritating vapour, or an infectious morbific principle acting directly on the respiratory organs and stomach;—to gastric disorder and saburra; the lungs being affected sympathetically;—to a nervous irritation, sui generis, giving rise to a peculiar kind of catarrh, attended with convulsive action of the glottis and diaphragm;—to spasmodic irritation of the stomach primarily, and of the lungs and diaphragm symptomatically;—to inflammatory irritation of the stomach, extended to the bronchi, &c.;—to irritation of the pneumogastric nerves extended to the diaphragm and stomach, giving rise to forcible expiratory efforts and vomiting respectively; the latter relaxing, and being antagonistic to, the spasmodic state of the respiratory organs; to irritation of the phrenic nerve and a morbid state of the diaphragm, extended to the rest of the organs of respiration, and to the stomach;—to exalted irritability of the lungs, as well as of the diaphragm and stomach; or to a peculiar atmospheric miasm affecting chiefly the intercostal, pneumogastric, and recurrent nerves;—to a spasmodic state of the larynx and diaphragm superadded to a common cough;—to a specific catarrhal inflammation seated in the trachea and bronchi, accompanied with spasm of the trachea and glottis;—to an inflammatory state of the bronchi, being a variety of bronchitis, or to a state which should be regarded as a variety of pulmonary catarrh; whilst many have imputed the disorder to inflammatory irritation of the brain, or of its membranes, or of both; or to cerebral irritation consequent upon inflammation of the bronchi, the characteristic hoop occurring when the cerebral irritation has commenced. From my researches into the pathology and treatment of *hooping-cough*, previously to 1825, I was led to consider the medulla oblongata or its membranes very early implicated in this disease. — *Copland, Dictionary of Practical Medicine.*

Hórehound. *s.* [see extract.] Native plant so called, aromatic and medicinal, of the order Labiatæ, so called, of the genus Marrubium.

Hoarhound has its leaves and flower-cup covered very thick with a white hoariness: it is famous for the relief it gives in moist asthmas, of which a thick and viscous matter is the cause; but it is now little used.—*Sir J. Hill, Materia Medica.*

Pale *horehound*, which he holds of most especial use. *Drayton, Polyolbion*, song 13.

Horehound, from A.S. *hara-hune*, from *hara*, a hare, and *hune*, an unmeaning word, now replaced with hound. In one MS. the reading is *hara-hunig*, *hare-honey*. The name may, perhaps, be a corruption of Latin *urinaria*, the plant having been regarded as of great efficacy in cases of strangury and dysuria.—*Dr. Prior, Popular Names of British Plants.*

Horízon. *s.* [Gr. ὁρίζων, that which terminates, from ὅρος = a boundary.] Line that terminates the view.

The *horizon* is distinguished into sensible and real: the sensible *horizon* is the circular line which limits the view; the real is that which would bound it, if it could take in the hemisphere.—*Todd.*

With the accent on the *first syllable*, incorrectly if we look at the quantity of the *-i-*, which is long; but in conformity with *théatre*, *sénator*, and most other words in the same condition.

When the morning sun shall raise his car
Above the border of this *horizon*,
We'll forward towards Warwick and his mates.
Shakespear, Henry VI. Part III. iv. 7.

She began to cast with herself from what coast this blazing star should first appear, and at what time it must be upon the *horizon* of Ireland.—*Bacon.*

When the sea is worked up in a tempest, so that the *horizon* on every side is nothing but foaming billows and floating mountains, it is impossible to describe the agreeable horrour that rises from such a prospect.—*Addison.*

Next morning, therefore, by what time the sun
With glitt'ring rayes had gilt the *horizon*.
Sylvester, Du Bartas, 418. (Ord MS.)

When once the sun has come near enough to the zenith, and remains above the *horizon* long enough to give more warmth during one diurnal rotation than the counteracting cause, the earth's radiation, can carry off, the mere continuance of the cause would progressively increase the effect, even if the sun came no nearer and the days grew no longer; but in addition to this, a change takes place in the accidents of the cause, its series of diurnal positions tending to increase the quantity of the effect.—*J. S. Mill, System of Logic*, iii. xv. § 2.

Horizóntal. *adj.*

1. Near the horizon.

As when the sun, new risen,
Looks through the *horizontal* misty air,
Shorn of his beams; or from behind the moon,
In dim eclipse, disastrous twilight sheds
On half the nations.

Such as was then by Latian shepherds borne,
Adds all her breath: the rocks and woods around,
And mountains, tremble at th' infernal sound.
Dryden, Translation of the Æneid, vii. 715.

3. Extremity of the waxing or waning moon, as mentioned by poets.

She blest the bed, such fruitfulness convey'd,

B. Jonson, Volpone.

Horn with horn; horn under horn. This is a combination applied to that kind of common-right whereby cows and oxen w[illegible]

turned out on commons extending over or lying within the boundaries of more than one parish.

The commoning of *horn with horn* was properly when the inhabitants of several parishes let their common herds run upon the same open spacious common, that lay within the bounds of several parishes; and therefore that there might be no dispute upon the right of tithes, the bishop ordains that the cows should pay all profit to the minister of the parish where the owner lived.—*Tomlin, Law Dictionary, Granger.*

Horn-shavings. *s. pl.* Scrapings or raspings of the horns of deer; hartshorn.

Hórnbeam. *s.* Native tree so called.

Betulus, or the *hornebeam* tree, grows great and very like unto the elme, or hazel tree, having a great body; the wood or timber whereof is better for arrows or shafts, pullies for mills, and such like devises, than elm or wich hazel: for in time it waxeth so hard that the toughnesse and hardnesse of it may be rather compared to horn than unto wood, and therefore it was called *hornbeam* or hardbeam. —*Gerarde, Herball*, p. 1479: 1633.

The *hornbeam* is indigenous to a great part of England, and abounds in Essex, Kent, Norfolk, &c.; it is also common in parts of Wales, in Lancaster, and in the north midland counties; or it does not, however, extend to the northernmost counties; nor do we think it truly indigenous to Scotland; although Sir W. Hooker includes it in his Flora Scotica. . . . It is also a native of Ireland.—*Selby, British Forest Trees.*

Hornbeam, or *hornbeech*, apparently from Latin 'ornus,' with the usual prefix of an aspirate, the tree having by the older botanists been classed under that genus.—*Dr. Prior, Popular Names of British Plants.*

Hórnbill. *s.* Bird so called, of the genus Buceros.

The epiderm is in some places continued as a simple layer over the corium, following its wrinkles and folds, as around the naked necks of some vultures. It is moulded upon the bony mandibles to form the beak, and in some birds adheres to osseous protuberances on the cranium, where it forms a species of horn; and it is remarkable that these instances occur chiefly in those orders of birds, the Cursores and Rasores, which are most analogous to the ruminantia among quadrupeds: the cassowary and helmeted curassow are examples. The *hornbills* are, however, instances in the volitorial, and the kamichi in the grallatorial order.—*Owen, Anatomy of Vertebrates*, ch. xxii.

Hórnblende. *s.* [German direct, *blende.*] Mineral so called. See extract.

Hornblende is also a mineral abundantly distributed in several igneous and altered rocks. It is characterised by its dark green or velvet black colour, its peculiar form of crystallisation, and its shining lustre. It is opaque and tough, but yields pretty easily to the knife. It contains a considerable portion of iron (the blacker varieties especially) combined with silica, alumina, lime and magnesia. It has a distinct cleavage and a coarse uneven fracture, and yields a peculiar smell when breathed upon. Augite is another name for the same mineral, distinguished from *hornblende* by its higher lustre, greater hardness, and conchoidal fracture, and is more frequently found in volcanic rocks of comparatively modern date, than in the oldest igneous and altered rocks.—*Ansted, Geology, Introductory, Descriptive, and Practical*, vol. ii. p. 178.

Hornblende rock, united with quartz, is called hornstone.—*Ibid.* 185.

It [*horsechestnut*] hath digitated or fingered leaves: the flowers, which consist of five leaves, are of an anomalous figure, opening with two lips: there are male and female upon the same spike: the female flowers are succeeded by nuts, which grow in green prickly husks. Their whole year's shoot is commonly performed in three weeks' time, after which it does no more than increase in bulk, and become firm; and all the latter part of the summer is occupied informing and strengthening the buds for the next year's shoots.—*Miller.*

It is the generally received opinion that the *horsechestnut* tree is a native of the mountainous parts of Asia, and that its introduction into Europe took place about the middle of the sixteenth century; Clusius informs us that at Vienna, in 1558, there was a plant of this species that had been brought there twelve years before, and our countryman Gerard in 1579, the first of our writers who mentions it, speaks of it . . . as a rare foreign tree. . . . Mr. Boyle, however, in his illustrations, says he never met with the common *horse-chestnut* in the mountainous parts of Northern India, though there the pavia or Indian chestnut is abundant.—*Selby, British Forest Trees.*

Horsechestnut, said to be so called from its fruit being used in Turkey, the country from which we received it, as food for horses that are broken or touched in the wind. . . . In this country horses will not eat them, and the name was perhaps, in reality, given to those nuts to express coarseness.—*Dr. Prior, Popular Names of British Plants.*

Gilbert, master of the *hospitallers*, chiefly stirred up the king to this war.—*Fuller, Church History*, p. 93.

Many of these devotees combined the profitable employment of traffic with the holier office of the palmer: and those who were thus enabled to, established a relationship with the lords of the neighbouring provinces, had it frequently in their power to befriend their less fortunate brethren. In the middle of the eleventh century, some merchants of Amalfi, a rich city of the kingdom of Naples, having in the course of their trading in Egypt ingratiated themselves with the caliph Monstaser Billah, who at that time held the holy city under his sway, obtained permission to establish a hospital within the limits of Jerusalem, for the use of poor and sick Latin pilgrims. In accordance with the order of the caliph, the Mahometan governor of the city assigned to these pious men a site close to the Holy Sepulchre, on which, as soon as possession could be obtained, they erected a chapel dedicated to the Virgin, giving it the name of St. Mary ad Latinos, to distinguish it from those churches where the service was performed according to the Greek, and from that time its sacred duties were carried on by Benedictine monks appointed for the purpose. At the same time, two hospitals, one for either sex, were erected in the vicinity of the chapel, for the reception of pilgrims; and eventually each of these hospitals had a separate chapel annexed to it: that for the men being dedicated to St. John the Almoner, and the one destined for the women to St. Mary Magdalene. Many pilgrims, who on their arrival from Europe had here experienced the kindness and hospitality so liberally extended to all wayfarers, abandoned the idea of returning to their native homes, and formed themselves into a band of charitable assistants, who, without any regular religious profession, devoted themselves to the service of the hospital, and the care of its sick inmates. All the chief cities of Italy, and the south of Europe generally, subscribed liberally for the support of this institution; the merchants of Amalfi, who were its original founders, becoming the stewards of their bounty; and as its beneficial influence became more widely known throughout Europe, from the favourable reports of grateful pilgrims on their return from these distant climes, the amount of their revenue, and consequently of their powers of usefulness, became greatly augmented. Such was the original establishment of the *hospitallers* of Jerusalem which may justly be considered as the cradle of the order of St. John, and from this pious fraternity of charitable devotees sprang a body of men who for centuries became the terror of the infidel and the bulwark of christendom in the east.—*W. Porter, Knights of Malta*, vol. i. ch. i. p. 13.

[In the troubled times following the breaking up of the Roman empire the first duty of the subject was to follow his lord into the field when required. The summons to the performance of this duty was expressed by the terms *bannire in hostem*, to order out against the enemy, or to order out on military service. 'Quicunque liber homo *in hostem bannitus fuerit* et venire contempserit plenum heribannum componat,' i.e. as it is explained, let him pay a fine of sixty shillings.—Edict of Charlemagne in Muratori, Dissertation 26. The term *hostis* then, which primarily signified the enemy against whom the expedition was to be made, was compendiously used for the military service itself, and is frequently taken as synonymous with *hostilis expeditio*, or *exercitalis expeditio*, being then used as a feminine noun. A supplication is addressed to Charlemagne, 'ne episcopi deinceps sicut hactenus vexentur *hostibus*' (i.e. with demands of military service), 'sed quando nos *in hostem* pergimus' (which may be translated either, when we march against the enemy, or when we proceed on military duty or join the ranks), 'ipsi propriis resideant in parochiis.' The same immunity is expressed in a charter of A.D. 965, 'nec ab hominibus ipsius ecclesiæ hostilis expeditio requiratur.'—*Wedgwood, Dictionary of English Etymology.*]

The verdure prospers and the blossoms smile,
Yet poor the fruit, and form'd by long delay,
Nor will the profits for the culture pay;
The skilful gardener then no longer stops,
But turns to other beds for bearing crops.

Bavarian, *hugker, hugkler, hugkner*; Swabian, *huker, hukler*, a petty dealer, *huckster*. The Old High German *wuocher* is applied to the increase of plants; *erde-wuocher*, the fruits of the earth. (Notker.) It is plain that *huckster* was understood as signifying an engrosser or enhancer of prices when it was translated in Latin *auxionarius, auxiatrix*. To *huff*, which signifies in the first instance to blow, is commonly used in the sense of showing one's displeasure, giving one a sharp answer. [The utterance induced by the shudder of cold is represented in different dialects by the interjections *ugh! u! uk! hu! schu! schuck!*... Another mode in which cold affects the frame is to make us crouch together, bringing the elbows to the side and crossing the arms upon the breast. Hence, English, *hug*, or *huggle*, to huddle, crouch in one's bed for cold. In the ordinary sense of the word the reference to cold is lost, and all that remains is the notion of pressing the arms upon the chest, pressing something closely to one's breast. From the same image are Dutch, *huck-schouderen*, to shrug the shoulders; *hucken*, to crouch; Swedish, *huka sig, sitta huka*; Danish, *sitte paa hug*, to squat on one's hams. The introduction of an *r* (always useful in the expression of shivering) gives English, *hurch*, to cuddle, *hurkle*, to shrug up the back. (Halliwell.) *To hurkle*, to crouch, draw the body together; *hurkle-backit*, as English, *huckle-backed*, crump-backed. (Jamieson). Dutch, *hurken*, as well as *hucken*, to crouch. (Kilian); Old Norse (with transposition of the *r*), *hruka*, crouching, shrugging;... English, *to ruck*, to squat on the hams. The same insertion of an *r* is seen in Scandinavian, *hurdle*, to crouch or bow together like a cat or a hedgehog, as compared with English *huddle*, or with Pl. Dutch, *huddern*, to shudder; or again, in English, *shrug*, from *schue'!* the interjection of cold, or in *croodle*, as well as *cuddle*, to crouch with cold.—*Wedgwood, Dictionary of English Etymology.*]

Intuitive knowledge needs no probation, nor can have any, this being the highest of all *human* certainty.—*Locke.*

It is no disparagement, therefore, to the science of *human* nature, that those of its general propositions which descend sufficiently into detail to serve as a foundation for predicting phenomena in the concrete, are for the most part only approximately true. . . . *Human* beings do not all feel and act alike in the same circumstances; but it is possible to determine what makes one person, in a given position, feel or act in one way, another in another; how any given mode of feeling and conduct, compatible with the general laws (physical and mental) of *human* nature, has been, or may be, formed. In other words, mankind have not one universal character, but there exist universal laws for the formation of character. And since it is by these laws, combined with the facts of each particular case, that the whole of the phenomena of *human* action and feeling are produced, it is on these that every rational attempt to construct the science of *human* nature in the concrete, and for practical purposes, must proceed.—*J. S. Mill, System of Logic.*

Húmanist. *s.* Same as Humanitarian.

Physicians use commonly to intend some other art or practice, which they fancy more than their profession; for you shall have of them antiquaries, poets, *humanists*, statesmen, merchants, divines; and in every of these better seen than in their professions.—*Bacon, Advancement of Learning*, b. ii.

Of all sorts of men in the world, none repute themselves, or are reputed by others, wiser, than the profound *humanist* and cunning politician.—*Junius, Sin Stigmatized*, p. 603.

Humanitárian. *s.* One who supports the human nature of Christ.

They [the negro slaves] ought to be forcibly reminded of the state in which their brethren in Africa still are, and taught to be thankful for the providence which has placed them within reach of the means of grace. I know no right except such as flows from righteousness; and as every Christian believes his righteousness to be imputed, so must his right be an imputed right too. Húmanizing. *part. adj.* Investing with the character of humanity; softening.

Whatever is beneficent and *humanising* in the aims, tendencies, and proper objects of the state, it [the church] collects in itself as in a focus to radiate them back in a higher quality; or, to change the metaphor, it completes and strengthens the edifice of the state, without interference or commixture, in the mere act of laying and securing its own foundations.—*Coleridge, Church and State*, p. 134.

Cyril had himself too much of the hot Egyptian blood in his veins; and the bishop, instead of allaying this sanguinary propensity by the gentle and *humanising* influences of Christianity, was rarely the last to raise the banner of strife, never the first to lay it down, never laid it down until his enemies were prostrate at his feet.—*Milman, History of Latin Christianity*, b. ii. ch. iii.

In some of the Pronouncing Dictionaries (perhaps in most of them) this word is given as one of the words beginning with *h* which are to be sounded as if the *h* was absent, i.e. as *umble*; and many speakers may be found who take some trouble to speak accordingly. The pronunciation is not only wrong, but (what in the eyes of many is worse) vulgar. The combination which gives rise to it is *umble-pie*. *To eat humble-pie* is a term for eating one's own words, or for being humiliated. *Thimble-pie* is a similar term, meaning, among schoolboys and children, a rap or tap on the head with a *thimble*. It means punishment, just as *humble-pie* means *humiliation*. The real *umble-pie* is a dish which few speakers who sound *humble* without the *h* would care to take their pronunciation from. It is a pie made of the *umbles* of a beast. The true *umbles* are the navel-string and placenta of such domestic animals as have them in sufficient bulk to make a pie of. With some latitude, it means a pie made of the parts akin t[o] it; i.e. it is giblet-pie, *mutatis mutandi*[s] cows, sheep, and pigs. It is, probab[ly] long time since such was a comm[on]

still less a genteel one. The pronunciation, however, which has grown out of it still exists as vulgar-genteel refinement.

Húmbug. *s.* [probably from the combination given in the extract from Ben Jonson. See Wedgwood.]

1. Plausible deceit.

There is a word very much in vogue with the people of taste and fashion, which though it has not even the 'penumbra' of a meaning, yet makes up the sum total of the wit, sense, and judgement of the aforesaid people of taste and fashion!—'This peace will prove a confounded *humbug* upon the nation.... These theatrical managers *humbug* the town damnably.... *Humbug* is neither an English word, nor a derivative from any other language. It is indeed a blackguard sound, made use of by most people of distinction! It is a fine make-weight in conversation, and some great men deceive themselves so egregiously as to think they mean something by it!—*Student*, vol. ii. p. 41: 1751.

As long as we have a man's body, we play our vanities upon it, surrounding it with *humbug* and ceremonies, laying it in state, and packing it up in gilt nails and velvet; and we finish our duty by placing over it a stone, written all over with lies.—*Thackeray, Vanity Fair.*

2. Plausible deceiver.

'Sir, against one o'clock prepare yourself,
Till when you must be fasting; only take
Three drops of Vinegar in at your nose,
Two at your mouth, and one at either ear,
To sharpen your five senses, and cry *hum*
Thrice, and then *buz* as often.'
(B. Jonson, The Alchemist.)

The medicaments are of a cool *humecting* quality, and not too much astringent.—*Wiseman, Surgery.*

Humídity. *s.* Moisture.

We'll use this unwholesome *humidity*, this gross watry pumpion.—*Shakespear, Merry Wives of Windsor*, iii. 3.

Young animals have more tender fibres, and more *humidity*, than old animals, which have their juices more exalted and relishing.—*Arbuthnot, On the Nature and Choice of Aliments.*

[*Humidity*] is that quality which we call moisture, or the power of wetting other bodies. It differs very much from fluidity, depending altogether on the congruity of the component particles of any liquor to the pores or surfaces of such particular bodies as it is capable of adhering to. Thus quicksilver is not a moist liquor, in respect to our hands or clothes, and many other things it will not stick to; but it may be called so in reference to gold, tin, or lead, to whose surfaces it will presently adhere. And even water itself, that wets almost every thing, and is the great standard of *humidity*, is not capable of wetting every thing; for it stands and runs easily off in globular drops on the leaves of cabbages and many other plants; and it will not wet the feathers of ducks, swans, and other water-fowl.—*Quincy.*

Humiliátion. *s.*

1. Descent from greatness; act of humility.

It may serve for a great lesson of *humiliation* to mankind, to behold the habits and passions of men trampling over interest, friendship, honour, and their own personal safety, as well as that of their country.—*Swift.*

At Essex House, he had to calm the rage of a young hero incensed by multiplied wrongs and *humiliations*, and then to pass to Whitehall for the purpose of soothing the peevishness of a sovereign, whose temper, never very gentle, had been rendered morbidly irritable by age, by declining health, and by the long habit of listening to flattery and exacting implicit obedience.—*Macaulay, Critical and Historical Essays, Lord Bacon.*

Humílity. *s.*

1. Freedom from pride; modesty; not arrogance.

When we make profession of our faith, we stand; when we acknowledge our sins, or seek unto God for favour, we fall down; because the gesture of constancy becometh us best in the one, in the other the behaviour of *humility.*—*Hooker, Ecclesiastical Polity.*

As high turrets, for their airy steep,
Require foundations in proportion deep;
And lofty cedars as far upwards shoot,
As to the nether heavens they drive the root;
So low did her secure foundation lye,
She was not humble, but *humility.* *Dryden.*

Dryden, Wife of Bath's Tale.

Rum, brandy, gin with choicest smack,
From Holland brought, Batavia's rack;
All these will nought avail,
To cheer a truly British heart,
And lively spirits to impart,
Like *humming* nappy *ale.*
Song ascribed (perhaps inaccurately) to Gay.

[Sprightly *ale*; probably from the spirituous liquor called *hum* which ale perhaps displaced; or from a mixture of *hum* with the malt liquor, as spirits are now sometimes mixed with it.—*Todd.*]

Spreading bays, with smooth sand beaches, covered with many shells and fragments of shells, separate the hills and *hummocks* on the west side, but all these beaches are partly covered with angular rocks and with boulders, more or less rounded, these latter marking the progress of weathering, and measuring in some degree the rate of destruction of the granite above.—*Ansted, The Channel Islands.*

Húmmums. *s. pl.* [Persian, *hummum*; the accent being on the last syllable. In Eng-

lish it is on the first. The word, however, is so nearly limited to the well-known hotel in Covent-Garden so called, that it may be deemed a *proper* rather than a *common* name.] Sweating-places, or baths.

The *hummums* (or sweating-places) are many [at Cazbyn in Persia].—*Ibid.*, p. 211.

Húmoral. *adj.*

1. Proceeding from the humours.

This sort of fever is comprehended under continued *humoral* fevers.—*Harvey, Discourse on Consumptions.*

2. In *Medicine*, it is specially applied to the doctrine which deduced all or the greater proportion of diseases from a degeneration of the fluid rather than the solid part of the body; Solidism being its opposite.

I have, therefore, assumed the general principles of Hoffmann. And, if I have rendered them more correct, and more extensive in their application, and, more particularly, if I have avoided introducing the many hypothetical doctrines of the *humoral* pathology which disfigured both his and all the other systems that have hitherto prevailed, I hope I shall be excused for attempting a system, which, upon, the whole, may appear new.—*Cullen, Works*, vol. i. p. 470.

Florentius Schuyl of Leyden sought to recommend the iatrochemical doctrines, by maintaining that they were to be found in the Hippocratic writings; nor was it difficult to give a chemical interpretation of the *humoral* pathology of the ancients. The Italian physicians also, for the most part, took this line, and attempted to show the agreement of the principles of the ancient school of medicine with the new chemical notions. This, indeed, is the usual manner in which the diffusion of new theoretical ideas becomes universal.—*Whewell, History of Scientific Ideas*, vol. ii. p. 179: ed. 1858.

It was incumbent on Cullen, after having constructed a theory of disease by reasoning from the solids, to have constructed another theory by reasoning from the fluids; so that a co-ordination of the two theories might have raised a science of pathology, as complete as the then state of knowledge allowed. But to this, his mind was unequal. Able though he was, he lacked the grasp of intellect which characterized Adam Smith, and which made that great man perceive, that every deductive argument, which is founded on a suppression of premisses, must be compensated by a parallel argument, which takes those premisses into account. So little was Cullen aware of this, that, having built up that system of pathology which is known to medical writers as solidism, he never took the pains to accompany it by another system, which gave the first rank to the fluids. On the contrary, he believed that his plan was complete and exhaustive, and that what is termed *humoral* pathology was a fiction, which had too long usurped the place of truth.—*Buckle, History of Civilization in England*, vol. ii. ch. xx.

Humoral pathology is simply a requirement of common practical sense; and it has always held a place in medical science, although the limits of its domain have, no doubt, been variously circumscribed or interpreted at different times. Of late years, it has met with a new basis and support in morbid anatomy, which, in the inadequacy of its discoveries in the solids to account for disease and death, has been compelled to seek for an extension of its boundary through a direct examination of the blood itself.—*Translation of Rokitansky's Pathological Anatomy*, vol. i. p. 362: ed. 1854.

Húmorist. *s.*

1. One who conducts himself by his own fancy; one who gratifies his own humour.

By a wise and timous inquisition the peccant humours and *humorists* must be discovered and purged, or cut off: mercy, in such a case, in a king, is true cruelty.—*Bacon, Advice to Villiers.*

Many of the rest were as bad men as princes; *humorists* rather than of good humours.—*Sir T. Browne, Christian Morals*, iii. 12.

Extraordinary men of arts, in all ages, are generally observed to be the greatest *humorists*: they are so full of the sweetness of their own conceptions, that they become morose when they are drawn from them.—*Bishop Sprat, History of the Royal Society*, p. 336.

The *humorist* keeps to himself much more than he wants, and gives his superfluities to purchase heaven.—*Addison.*

At last Michael tries to raise the devil, and the devil comes at his call. My devil was to be, like Goethe's, the universal *humorist*, who should make all things vain and nothing worth, by a perpetual collation of the great with the little in the presence of the infinite. I had many a trick for him to play, some better, I think, than any in the Faust. In the meantime, Michael is miserable; he has power, but no peace, and he every day more keenly feels the tyranny of hell surrounding him. In vain he seems to himself to assert the most absolute empire over the devil, by imposing the most extravagant tasks; one thing is as easy as another to the devil. 'What next, Michael?' is repeated every day with more imperious servility.—*Coleridge, Table Talk.*

Sir Willoughby, who remembered the *humourist* in all his departed glory, and still venerated him as a temple where the deity yet breathed, though the altar was overthrown, made to this extraordinary remonstrance no other reply than a long whiff, and a 'Well, Russelton, damme, but you're a queer fellow.'—*Sir E. L. Bulwer, Pelham*, ch. xxiii.

9. Caprice; whim; predominant inclination.

In private, men are more bold in their own *humours*; and in consort, men are more obnoxious to others' *humours*: therefore it is good to take both.—*Bacon.*

Madame D'Arblay has left us scarcely any thing but *humours*. Almost every one of her men and women has some one propensity developed to a morbid degree. In Cecilia, for example, Mr. Delvile never opens his lips without some allusion to his

own birth and station; or Mr. Briggs, without some allusion to the hoarding of money; or Mr. Hobson, without betraying the self-indulgence and self-importance of a purse-proud upstart; or Mr. Simkins, without uttering some sneaking remark for the purpose of currying favour with his customers; or Mr. Meadows, without expressing apathy and weariness of life; or Mr. Albany, without declaiming about the vices of the rich and the misery of the poor; or Mrs. Belfield, without some indelicate eulogy on her son; or Lady Margaret, without indicating jealousy of her husband. Morrice is all skipping, officious impertinence, Mr. Gosport all sarcasm, Lady Honoria all lively prattle, Miss Larolles all silly prattle, ... but we cannot deny that, in the rank to which she belonged, she had few equals, and scarcely any superior. The variety of *humours* which is to be found in her novels is immense; and though the talk of each person separately is monotonous, the general effect is not monotony, but a very lively and agreeable diversity.—*Macaulay, Critical and Historical Essays, Madame D'Arblay.*

Hutch. *s.* [A.S. *hwæcca*.] Coffer, chest, or case for storing articles of housekeeping; safe.

In their tabernacles, amperes, *hutches*; or as a mystery in their locked closets.—*Sheldon, Miracles of Antichrist*, p. 255: 1616.

The best way to keep them, after they are threshed, is to dry them well, and keep them in *hutches*, or close casks.—*Mortimer, Husbandry.*

Archbishop Chichelé gave a borrowing chest to the university of Oxford, which was called Chichelé's *hutch*.—*T. Warton, Notes on Milton's Comus.*

Hutch. *v. a.* Lay up in, or as in, a hutch, coffer, or chest; hoard.

In her own loins,
She *hutch'd* the all-worshipt ore, and precious gems.
Milton, Comus, 718.

Huzzá. *interj.* Exclamation, or shout, of admiration or applause.

Liberty, property, and old England for ever, huzza!—*Goldsmith, Essays*, xxiv.

Huzzá. *s.* Utterance of the shout Huzza.

The *huzzas* of the rabble are the same to a bear as they are to a prince.—*Sir R. L'Estrange.*

The wholé armament was in the highest spirits. The rowers, flushed by success, and animated by the thought that they were going to fight under the eyes of the French and Irish troops who had been assembled for the purpose of subjugating England, pulled manfully and with loud *huzzas* towards the six huge wooden castles which lay close to Fort Lisset.—*Macaulay, History of England*, ch. xviii.

Huzzá. *v. n.* Shout Huzza.

With that I *huzzaed*, and took a jump across the table.—*Tatler*, no. 45.

Huzzá. *v. a.* Receive with huzzas.

He was *huzzaed* into the court by several weavers and clothiers.—*Addison.*

Huzzáing. *verbal abs.* Shouting of Huzza.

From the Place Louis Quinze, where they alight, all the way to the Hôtel-de-Ville, it is one sea of tricolour cockades, of clear national muskets; one tempest of *huzzaings*, hand-clappings, aided by 'occasional rollings' of drum-music.—*Carlyle, The French Revolution*, pt. i. b. v. ch. viii.

Hýacinth. *s.* [Gr. *ὑάκινθος*; Lat. *hyacinthus*.]

1. In *Botany.* Plant so called. The garden, or florists', hyacinth falls into numerous varieties and sub-varieties. The wild hyacinth, a native plant, is the Hyacinthus (Agraphis) nonscriptus. The Muscari racemosum is called, from its inflorescence, the Grape, and, from its smell, the Starch hyacinth.

The *hyacinth* hath a bulbous root: the leaves are long and narrow: the stalk is upright and naked, the flowers growing on the upper part in a spike: the flowers consist each of one leaf, are naked, tubulose, and cut into six divisions at the brim, which are reflexed: the ovary becomes a roundish fruit with three angles, which is divided into three cells, which are filled with roundish seeds.—*Miller.*

2. In *Mineralogy.* Gem so called; Jacinth.

The *hyacinth* is the same with the lapis lyncurius of the ancients. It is a less shewy gem than any of the other red ones. It is seldom smaller than a seed of hemp, or larger than a nutmeg. It is found of various degrees of deepness and paleness; but its colour is always a deadish red, with a considerable admixture of yellow; its most usual is that mixed red and yellow, which we know by the name of flame-colour.—*Sir J. Hill, On Fossils.*

Diamonds, sapphires, rubies, topazes, *hyacinths*, and chrysoberyls are reckoned the most valuable gems.—*Ure, Dictionary of Arts, Manufactures, and Mines, Gems.*

Hýacinthine. *adj.* Made of, constituted by, belonging to, resembling hyacinths.

[His] *hyacinthine* locks
Round from his parted forelock manly hung.
Milton, Paradise Lost, iv. 301.

His curling locks like *hyacinthine* flowers.
Cowper, Translation of the Odyssey.

Hýades. *s. pl.* [Gr. *ὑάδες*; *ὕω* = rain.] Constellation so called, and connected by the ancients with rainy weather.

We may add that it is also usual to distinguish the Head of Medusa, near Perseus; the Pleiades upon the back, the *Hyades* upon the forehead, of the Bull. . . . In the description of the shield of Achilles the immortal poet speaks of the Pleiades, the *Hyades*, Orion, the Bear, or Chariot.—*Arago, Popular Astronomy*, translated by *Admiral F. W. H. Smyth* and *R. Grant*, b. viii.

Then first on seas the hollowed alder swam;
Then sailors quarter'd heaven, and found a name
For every fix'd and every wandering star;
The pleiads, *hyads*, and the northern car.
Dryden, Translation of the Georgics, i. 207.

Hýaline. *adj.* [Gr. *ὑάλινος*, from *ὕαλος* = sea-green, also glass; Lat. *hyalus*.]

1. In *Medicine.* Transparent, clear, and slightly consistent (i.e. as a jelly). The older and more common use of the word is in the derivative form Hyaloid = *hyaline-like*, which is used both as an adjective and a substantive for the capsule of the vitreous humour of the eye. From this *hyaline*, a newer word (meaning 'like the contents of the *hyaloid*') seems to be derived, rather than from the original Greek.

Dr. Sankey's own examinations have only as yet extended to the capillaries, which he believes to be more or less diseased in every case of general paralysis. The most constant appearance is a tortuosity of these vessels, which may amount to a complex twisting, or little knots of varicose vessels of a very complicated kind. Another appearance is a sort of *hyaline* deposit, fitting more or less closely around the capillaries; but it must be observed that neither of the above morbid changes are confined to general paralysis.—*Copland, Dictionary of Practical Medicine.*

2. A rhetorical, or poetic, term for the colour of the sea or atmosphere. Used *substantivally*.

Another heaven
From heaven-gate not far, founded in view
On the clear *hyaline*, the glassy sea.
Milton, Paradise Lost, vii. 617.

Hýaloid. *adj.* [Gr. *-ειδης* = like, having the

look, or appearance, (εἶδος) of anything.] See Hyaline.

Hýbrid. *s.* [Lat. from Greek, *hybrida.*] Cross-breed; mongrel; individual whose parents belong to either different species, or different varieties of the same species.

It is not to be wondered at that in wild nature *hybrid* varieties should be far from uncommon. . . . Saxifraga luteo purpurea of La Peyrouse and Saxifraga ambigua of De Candolle are only wild accidental *hybrids* between Saxifraga aretioides and calyciflora.—*Lindley.*

Angles, Jutes, Saxons, and Danes poured into our own country for centuries, but they only came in boat-loads; and, although comparatively numerous, must at all times have been much inferior in number to the native inhabitants. The probability, then, is that we are more Britons than Teutons by pedigree, although, believing ourselves purely the latter, we call ourselves Anglo-Saxons. At the best we are but *hybrids*, yet, probably, not the worse for that. Among the lower animals in the wild state, no *hybrids* are ever produced, and something similar to this, although from a very different cause, is found to be the case in the rude state of human society. There is here a repugnance, amounting, indeed, to hostility, which prevents it.—*J. Crawfurd, Classification of the Races of Man, Transactions of the Ethnological Society.*

Hýbrid. *adj.* Having the origin, or character, of a hybrid; belonging to the class of hybrids; bastard. Applied, in *Philology*, to words formed of elements from different languages; and, more generally still, to heterogeneous objects of any kind.

We should by all means deal with our separatists, and dissenters, as St. Paul did with those judaizing, *hybrid* Christians.—*South, Sermons*, v. 518.

In America, a matured republicanism quickly got rid of the *hybrid* method formerly adopted by the States of New England, and left every form of faith to its own resources.—*Gladstone, The State in its Relations with the Church.*

The Jews speak the languages of the many races among whom they are settled, and no section of them speaks the language of the Pentateuch, or any modification of it. The Egyptians speak Arabic nearly to the loss of their original tongue. . . . A German tongue with an admixture of Latin, is now the language of the great majority of the people of Britain. . . . Assuredly we do not conclude from these facts that the ancient Egyptians were of the Arabian race, the aboriginal people of France and Spain of Italian, or those of Britain of the German. What we should infer, even if we did not know it to be historically true, is simply that the countries in question were long in the occupation of foreign invaders, who mixed their blood largely with that of the original inhabitants, resulting in the production of a *hybrid* population originating in races distinct, yet nearly allied.—*J. Crawfurd, Classification of the Races of Man, Transactions of Ethnological Society.*

Hýbridism. *s.* Character, state, or condition of a hybrid.

'Tigress' is properly formed; but 'shepherdess,' with the base of English and the affix of French origin, is a specimen of *hybridism.*—*Dr. R. G. Latham, English Language.*

Hybridity. *s.* Same as Hybridism.

These are all well-ascertained instances of *hybridity.*—*Prichard, Physical History of Man.*

Hybridizátion. *s.* Rendering hybrid.

The most eminent physiologists seem to be arriving at the opinion that the fertilization of the ovule, as it is termed, consists in the union of a part of the contents of a pollen-grain with certain matter contained in the ovule, and that the embryo originates from this mixed matter. The correctness of this opinion is rendered still more probable by the consideration of what takes place under the circumstances of *hybridisation* of species.—*Thwaites, Annals of Natural History*, i. n. s. 163.

Hýbridizing. *verbal abs.* Act of hybridization.

The best paper we possess on the practical value of the facts elicited by *hybridising* is . . . from the pen of the late Dean of Manchester.—*Lindley.*

We can prove the affirmative, and that is by the use of *hybridising* experiments.—*Dr. Herbert*, in *Journal of the Horticultural Society.*

Hýbridous. *adj.* Hybrid. *Rare.*

Why such different species should not only mingle together, but also generate an animal, and yet that that *hybridous* production should not again generate, is to me a mystery.—*Ray.*

Hyd- and **Hydro-.** This, as may be seen by the entries, is an import prefix. The Greek word, ὕδωρ = water, its genitive case being ὕδατος; a fact which shows that either the final ρ is no part of the root, or that it has been got rid of. The vowel, too, which precedes it is long, -ωρ. Now, the ordinary rule in compounds from the Greek and Latin, where the substantive is what is called *imparisyllabic* (i.e. when the oblique cases have a consonant which is wanting in the nominative), is that it is from the fuller form that the compound is developed. Hence, the derivatives from ὕδωρ, and the compounds connected with them, ought to begin, not with *hydro-*, but with *hydat-*. As Hydatid, however, is the only word so formed, the others are more accurately derived from the adjectival form, ὕδρος, or rather from the root of it.

Hydátid. *s.* [Gr. ὑδατίς, -ίδος, ὕδωρ, ὕδατος = water; Lat. *hydatis.* See Hydro-.] Entozoon (intestinal worm) so called.

All the water is contained in little bladders, adhering to the liver and peritoneum, known by the name of *hydatides.*—*Wiseman, Surgery.*

The simplest of all forms of these parasites is the *hydatid* or acephalocyst. This consists of a vesicle filled with fluid, and apparently possessing no further organization. A careful examining of the wall of this vessel, however, shows that, besides the enveloping cyst, it contains two or more coats, and that in the substance of the inner one are the rudiments of new cells in various stages of growth. These, as they advance in development, project more and more into the cavity of the parent cell, and at last become detached from its wall, and lie loosely within it; shortly before this separation, however, the young *hydatid* is seen to contain smaller cells, which increase in size along with it.—*Carpenter, Principles of Human Physiology*, § 309, b.: ed. 1851.

Hydatids . . . are of no unfrequent occurrence in several of the internal organs of the body. They are called acephalocysts, headless bag. In size they vary from the bigness of a pea to that of a swan's egg. They look like, or rather they are, spherical membranous bladders filled with a thin colourless liquid which holds in solution a large quantity of common salt. . . . These *hydatid* tumours are more common in the liver than in any other single organ. . . . Minute in their origin, *hydatids* may enlarge and multiply till the tumour formed by them attains an enormous size, and at length destroys life by its bulk and pressure. . . . Of course, the direct consequences of the pressure will depend much upon the parts occupied by the *hydatids.* You may easily imagine what kind of symptoms are likely to ensue when they are lodged within the abdomen, within the less yielding thorax, within the unyielding skull.—*Watson, Lectures on the Principles and Practice of Physic*, lect. lxxiv.

Hýdra. *s.* [Gr. ὕδρα; Lat. *hydra* = water-serpent; such being its meaning as a *common* term. As an English word, however, its origin is rather from Hydra, the *proper* name; the particular Hydra of the lake Lerne (the Lernæan Hydra) being a fabulous monster, snake or dragon, from which as fast as one head was cut off, another shot out afresh. The destruction of this monster was the second labour of Hercules.]

1. From the Lernæan Hydra: (generally connected with *head*, and suggesting the notion of a *many-headed* monster; often used *adjectivally*).

New rebellions raise
Their *hydra* heads, and the false North displays
Her broken league to imp her serpent wings.
Milton, Sonnets, xv. 6.

Subdue
The *hydra* of the many-headed hissing crew.
Dryden.

More formidable *hydra* stands within,
Whose jaws with iron teeth severely grin.
Id., Translation of the Æneid, vi. 778.

2. In *Zoology.* Polype so called. See extracts.

Of the *hydra* or fresh-water polype, two species are commonly known, the *hydra* virides or green polype, and *hydra* fusca, or brown polype. . . . The body of the *hydra* consists of a simple bag or sac which may be regarded as a stomach. . . . At the upper end . . . is a central opening which is commonly termed the mouth, and this is surrounded by a circle of tentacula or arms, usually from six to ten in number. . . . A striking proof of the simplicity of the structure of the *hydra* is the fact that it may be turned inside out like a glove; that which was before its external tegument becoming the lining of its stomach and vice versâ.—*Carpenter, Principles of Human Physiology*, § 289.

The relations of the parts may be illustrated thus:—Cut off the finger of a leather glove that has a lining; and let the leather and the lining represent the ectoderm and endoderm of a *hydra.* Thrust the point of the glove-finger back into the cavity, until the introverted portion comes out beyond the open end. Cut off the projecting apex of the introverted portion level with the edges of the open end; and then unite the edges of the introverted portion and the outer portion. The arrangement of structures will then typify that which is common to all animals except the protozoa and the lower cœlenterata: the introverted part representing the alimentary canal; the outer part representing the body-wall; and the closed cavity between the two representing the peri-visceral sac. This, however, is not the whole parallelism. If in the glove-finger, representing in its original form the *hydra*, we suppose the leather standing for the ectoderm to be growing outwards, and the lining standing for the endoderm to be growing inwards, then if in the part that is introverted the same relations of growth are maintained, it is manifest that of its two layers the one which was outermost and is now innermost, will grow towards the open cavity which stands for the alimentary canal, while the other layer will grow towards the closed cavity standing for the peri-visceral sac. And these are the directions of growth actually found in the parts thus symbolized.—*Herbert Spencer.*

Hýdragogue. *adj.* [Gr. ὕδωρ = water + ἄγω = lead, bring out, induce.] Having a tendency to induce, or the property of inducing a flow or discharge of water: (specially applied in *Medicine* to a certain purgative medicine which not only brings away fecal matter, but brings along with it a great quantity of liquid matter).

Elaterium has a violent *hydragogue* action.—*Pereira, Materia Medica and Therapeutics.*

Hýdragogue. *s* Hydragogue medicine.

Hydragogues [are] such medicines as occasion the discharge of watery humours, which is generally the case of the stronger cathartics, because they shake most forcibly the bowels and their appendages.—*Quincy.*

Hýdrangea. *s.* Garden plant so called.

Hydrangeas may now be planted in pots.—*Abercrombie, Gardeners' Journal, April.*

Hydraúlic. *adj.* [Gr. ὕδωρ, and αὐλὸς = pipe, tube.] Connected with, relating, applied to Hydraulics.

We have employed a virtuoso to make an *hydraulick* engine in which a chymical liquor resembling blood, is driven through elastick channels.—*Arbuthnot and Pope.*

A pressure of five hundred tons may be obtained from a well-made *hydraulic* press with a ten-inch ram and a one-inch set of pumps.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Hydraúlical. *adj.* Same as Hydraulic.

Among the engines in which air is useful, pumps may be accounted and other *hydraulical* machines.—*Derham, Physico-Theology.*

Hydraúlics. *s.* See Hydrodynamics.

Hydraulics . . . considers the motion of fluids . . . as distinguished from *hydrodynamics*, [it] is that science which treats of certain machines or engines in which fluids are principally concerned. . . . *Hydrostatics* explain the equilibrium of fluids, or the gravitation of fluids at rest; upon removing that equilibrium, motion ensues; and here *hydraulics* commence. *Hydraulics*, therefore, suppose *hydrostatics.*—*Encyclopædia Metropolitana.*

Galileo, in a treatise entitled Delle Cose che stanno nell' Acqua, lays down the principles of *hydrostatics* already established by Stevens, and among others what is called the *hydrostatical* paradox. Whether he was acquainted with Stevens' writings may be perhaps doubted; it does not appear that he mentions them. The more difficult science of *hydraulics* was entirely created by two disciples of Galileo, Castellio and Torricelli. It is one everywhere of high importance, and especially in Italy. The work of Castellio, Della Misura dell' Acque Corrente and a continuation, were published at Rome in 1628. His practical skill in *hydraulics*, displayed in carrying off the stagnant waters of the Arno, and in many other public works, seems to have exceeded his theoretical science. An error into which he fell, supposing the velocity of fluids to be as the height down which they had descended, led to false results. Torricelli proved that it was as the square root of the altitude.—*Hallam, History of the Literature of Europe during the fifteenth, sixteenth, and seventeenth Centuries*, pt. ii. ch. viii.

Hýdrocele. *s.* [Gr. ὑδροκήλη.] Dropsy of the testicle.

In the local variety of dropsy that is called *hydrocele*, the re-accumulation of liquid is sometimes prevented by exciting just so much inflammation of the membrane as may cause its opposite surfaces to adhere; whereby, the cavity itself being abolished

any return of the disease is rendered impossible.—*Watson, Lectures on the Principles and Practice of Physic*, lect. xvi.

Hydrocephálic. *adj.* Relating to, connected with, constituted by, Hydrocephalus.

The children of such families often die in infancy or early youth; are frequently scrofulous, and are liable to *hydrocephalic* and convulsive diseases; and, if they grow up, are frail in body and imbecile in mind, or predisposed to mental disorder.—*Copland, Dictionary of Practical Medicine.*

Hýdrocéphalus. *s.* [Gr. κεφαλή = head.] Dropsy in the head. See extracts.

A *hydrocephalus*, or dropsy of the head, is only incurable when the serum is extravasated into the ventricles of the brain.—*Arbuthnot, On the Nature and Choice of Aliments.*

When the cerebral ventricles are distended with water, we express the diseased condition by the term *hydrocephalus*; when serous liquid collects in the pleuræ or in the pericardium, we say that the patient has *hydrothorax* or *hydropericardium*.—*Watson, Lectures on the Principles and Practice of Physic*, lect. xvi.

Hýdrochlóric. *adj.* In *Chemistry.* Constituted by the combination of hydrogen and Chlorine. See Muriatic.

When heartburn is attended by rancid, septic, or insipid eructations, the mineral acids, as the nitric, the *hydrochloric*, and the aromatic sulphuric acids, given in simple camphor, or aromatic water, or in suitable tonic infusions, will be most serviceable.—*Copland, Dictionary of Practical Medicine.*

A concentrated aqueous solution of this [*hydrochloric*] acid has long been known under the names of spirit of salt and of marine or muriatic acid; but in its purer form of gas it was discovered in 1772 by Priestley.... One of the most striking properties of *hydrochloric* acid gas is its powerful attraction for water.—*Turner, Elements of Chemistry*, p. 273.

Hýdrocyánic. *s.* In *Chemistry.* Constituted by the combination of hydrogen and Cyanogen. See Prussic.

Cyanogen unites as a compound radical with oxygen, hydrogen, and most other non-metallic elements; and also with the metals; many of the latter compounds are similar to the haloid salts, but others ... possess a perfectly distinct character.... *Hydrocyanic* acid, prussic acid, discovered by Scheele (for a knowledge of its nature and chemical properties we are indebted to Gay-Lussac), is a constituent of the water distilled from the leaves and blossoms of several stone-fruits; ... its vapour, when inhaled, instantly acts as a most powerful poison.—*Turner, Elements of Chemistry*, pp. 724—736.

Hýdrodýnamics. *s.* [Gr. δύναμις = power; δυνάμικος = having, relating to, power.] That branch of general *Mechanics* which considers the equilibrium and motion of fluids.

The terms *hydrostatics* and *hydrodynamics* have corresponding significations to the *statics* and *dynamics* in the mechanics of solid bodies; viz. *hydrostatics* is that division of the science which treats of the equilibrium of fluids, and *hydrodynamics* that which relates to their forces and motion. It is, however, very usual to include the whole doctrine of fluids under the general term *hydrodynamics*, and to denote the divisions relative to their equilibrium and motion by the terms *hydrostatics* and *hydraulics*. *Hydrostatics* is that branch of *hydrodynamics* which relates to the equilibrium and pressure of fluids.... *Hydraulics* treats of the phenomena attending the motion of fluids.—*Encyclopædia Metropolitana.*

Hýdrogen. *s.* In *Chemistry.* Elementary substance so called; in combination with oxygen, a constituent of water (whence its name ὕδωρ + the root of γεννάω = beget, produce).

Hydrogen [was] first correctly described in 1766 by Cavendish, under the name of inflammable air. It had been previously confounded with other combustible gases, and was called phlogiston, with the notion that it is the matter of heat.... [It] is colourless, inodorous, tasteless; always gaseous when uncombined; a powerful refractor of light; the lightest body in nature, and hence the best material for filling balloons.—*Turner, Elements of Chemistry*, p. 187: 1847.

Men are not, when brought together, converted into another kind of substance, with different properties; as *hydrogen* and oxygen are different from water, or as *hydrogen*, oxygen, carbon, and azote, are different from nerves, muscles, and tendons. Human beings in society have no properties but those which are derived from, and may be resolved into, the laws of the nature of individual man.—*Ibid.*, b. vi. ch. vii. § 1.

Sir H. Davy, from finding that the flame of *hydrogen* gas was not communicated through a long slender tube, conjectured that a shorter but still slenderer tube would answer the same purpose; this led him to try the experiments, in which, by continually shortening the tube, and at the same time lessening its bore, he arrived at last at the wire-gauze of his safety-lamp.—*J. S. Mill, System of Logic*, b. iv. ch. ii. § 4.

Hydrógrapher. *s.* One who employs himself in hydrography; one who investigates or illustrates the geography, or topography, of the sea.

It may be drawn from the writings of our *hydrographer*.—*Boyle.*

Hydrográphical. *adj.* Relating to maps or charts, which represent the sea-coast, rocks, islands, shoals, shallows, and the like.

Christopher Columbus, the first great discoverer of America, was a man that earned his living by making and selling *hydrographical* maps.—*Chambers.*

Hydrógraphy. *s.* [Gr. γράφω = write, describe.] Description of the watery (especially the marine and oceanic) parts of the terraqueous globe; system of survey of particular coasts and seas; maritime surveying.

For the reception of which waters he had prepared a channel; how deep, or how great a part of the earth is filled with them, I suppose is beyond this man's skill in philosophy or *hydrography* to determine.—*Bishop Croft, Animadversions on Dr. T. Burnet's Theory of the Earth*, p. 84.

Hýdromancy. *s.* [Gr. μαντεία = prophecy.] Prediction by water.

Divination was invented by the Persians: there are four kinds of divination; *hydromancy*, pyromancy, aeromancy, and geomancy.—*Ayliffe, Parergon Juris Canonici.*

The origin of *hydromancy* is ascribed by Varro to the Persians, and Numa is said to have had recourse to it for instruction how he should settle the ceremonies of religion.—*Brande, Dictionary of Science, Literature, and Art.*

Hýdromel. *s.* [Gr. ὕδωρ + μέλι = honey.] Drink, or beverage, composed of honey and water.

Hydromel is a drink prepared of honey, being one of the most pleasant and universal drinks the northern part of Europe affords, as well as one of the most ancient.—*Mortimer.*

In fevers the aliments prescribed by Hippocrates were ptisans and cream of barley; *hydromel*, that is, honey and water, when there was no tendency to a delirium.—*Arbuthnot, On the Nature and Choice of Aliments.*

Hydrómeter. *s.* [Gr. μέτρον, *s.*; μετρέω, *v.*; measure.] Instrument to measure certain qualities of water (generally its specific gravity).

Hydrometer is an instrument for ascertaining the specific gravity of liquids. Baumé's *hydrometer*, which is much used in France and other countries of the continent of Europe, when plunged in pure water of the specific gravity of 58° Fahrenheit, marks 0 upon its scale; in a solution containing fifteen per cent. of common salt and eighty-five of water by weight, it marks 15°, so that each degree is meant to indicate corresponding with one per cent. of that salt.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Hydrómetry. *s.* Measurement (of the specific gravity) of water.

In ... 1690 he [Dominico Guglielmini] was made professor of mathematics, and four years afterwards a new chair was created for him, under the title of that of *hydrometry*, which, from that period, was accounted deserving of being ranked among the cultivated sciences.—*Cresy, Encyclopædia of Civil Engineering*, p. 208: ed. 1856.

Hydropáthic. *adj.* Connected with, relating to, Hydropathy; (as, 'a *Hydropathic* establishment').

Hydrópathist. *s.* One who practises, one who puts faith in the practice of, Hydropathy.

(For example see extract under next entry.)

Hydrópathy. *s.* [Gr. πάθος = suffering.] Treatment of diseases by water.

He has tried both *hydropathy* and homœopathy ... has now settled into a confirmed *hydropathist*.—*Sala, Dutch Pictures.*

Hydrophóbia. *s.* [Gr. φόβος = fear.] Dread of water; specially applied to it in *Medicine* as a symptom in the disease caused by the bite of a mad dog.

Among those dismal symptoms that follow the bite of a mad dog, the *hydrophobia* or dread of water is the most remarkable.—*Quincy.*

The pathognomic signs [of *hydrophobia*] are,—cramps of the muscles of the pharynx and thorax; spasmodic action of the diaphragm; a great dread of fluids; a recurrence of paroxysms of phrensy on attempting to drink, or on exposure to a current of air; the flow of viscid saliva (*hydrophobic* slaver), delirium, exhaustion, and generally death. A person, we will suppose, is bitten by a rabid animal. After an uncertain interval, called the stage of incubation or the latent period, complaint is made of mental uneasiness, chilliness, languor, and lassitude; there is restlessness also, loss of appetite, and more or less headache. Sometimes a sensation of numbness, or even of great soreness, in the bitten part is experienced, but in any case the precursory symptoms are followed in two or three days by the confirmed stage of the disease. This commences generally with garrulity, peculiar sighings, nausea, and fever; to which succeed stiffness of the neck, difficulty of breathing and swallowing, a horror of liquids, an alarming sense of suffocation, and an excessive secretion of tenacious saliva causing frequent hawking and spitting. There now set in violent spasmodic convulsions of the whole body; the paroxysms being occasioned especially by the sight of liquids, or the sound of running water, or any attempt at drinking.... The stage of incubation in *hydrophobia* may be said to vary from thirty days to eighteen or twenty months; the duration perhaps depending upon the virulence and quantity of the poison, as well as upon the constitution and age of the party inoculated. The period appears to be shorter in very young persons than in those more advanced in years. Cases are recorded where the symptoms have set in as early as the eighth day; but others are known in which their appearance has been delayed for four, five, and seven years. In one instance related by Dr. Bardsley it is said that twelve years intervened between the bite and the first *hydrophobic* symptoms.—*Tanner, Practice of Medicine*, pt. i. iv.

Hýdrophóbic. *adj.* Connected with, relating to, Hydrophobia.

(For example see extract under preceding entry and Hyperesthesia).

Hýdrophoby. *s.* Hydrophobia, of which it is the more *vernacular* though *less common* form.

A letter from Dr. Lister to Mr. Aston, dated at York, March 26, 1683, was produced, containing an account of an *hydrophoby* in a man bitten by a mad dog.—*Birch, History of the Royal Society*, iv. 197.

Hydrópic. *adj.* Dropsical.

The world's whole sap is sunk:
The general balm th' *hydropick* earth hath drunk.
Donne.

Every lust is a kind of *hydropick* distemper, and the more we drink the more we shall thirst.—*Archbishop Tillotson.*

Hydropick wretches by degrees decay,
Growing the more, the more they waste away;
By their own ruins they augmented lye,
With thirst and heat amidst a deluge fry.
Sir R. Blackmore.

Hydrópic. *s.* Dropsical person.

Hýdropsy. *s.* Dropsy.

Soft-swoln and pale, here lay the *Hydropsy*,

Hýdroscope. *s.* [Gr. σκοπέω = see, observe.] Instrument for measuring the dampness, or moisture, of the air, or a gas.

It seems to me if a statical *hydroscope* could be had, it would be very convenient in regard to its fitness, both to determine the degrees of the moisture or dryness of the air, and to transmit the observations made of them to other.—*Boyle*, vol. i. p. 788. (Rich.)

Hydrostátic. *adj.* Connected with, relating to, Hydrostatics.

This character of specific gravity may be applied by any person of common intelligence, with the aid of a small *hydrostatic* balance.—*Ure, Dictionary of Arts, Manufactures, and Mines, Gems.*

It is hardly to be expected that the above reasoning will, at first sight, produce conviction in the mind of the reader, except he have ... followed, with clear and steady apprehension, some of the trains of reasoning by which the pressures of fluids are determined; as, for instance, the explanation of what is called the *hydrostatic* paradox.—*Whewell.*

Hydrostátics. *s.* [Gr. στάτικος, στάσις = from

root of στάω = stand.] See Hydrodynamics.

His [Boyle's] incomparable treatises of the air and *hydrostatics*.—*Bentley, Sermons*, vii.

The lofty column of water issuing out of the trump of Fame, exceeded all our conceptions of the power of *hydrostaticks*.—*Swinburne, Travels through Spain*, let. 43.

The first discovery made in *hydrostatics* since the time of Archimedes is due to Stevinus. He found that the vertical pressure of fluids on a horizontal surface is as the product of the base of the vessel by its height, and showed the law of pressure even on the sides.—*Hallam, History of the Literature of Europe during the fifteenth, sixteenth, and seventeenth Centuries*, pt. ii. ch. viii. § 20.

Hydrostátical. *adj.* Same as Hydrostatic.

A human body forming in such a fluid, will never be reconcilable to this *hydrostatical* law: there will be always something lighter beneath, and something heavier above; because bone, the heaviest in specie, will be ever in the midst.—*Bentley.*

Hydrostátically. *adv.* According to hydrostatics.

The weight of all bodies around the earth is ever proportional to the quantity of their matter: as for instance, a pound weight, examined *hydrostatically*, ... doth always contain an equal quantity of solid mass.—*Bentley, Sermons*, vii.

Hydrostatícian. *s.* Investigator of hydrostatics.

It is known to *hydrostaticians* that, according to a theorem of Archimedes, the weight of a body belonging to that kind may be gathered from the weight of the water, that is equal in magnitude to that part of the body that is immersed in that liquor when the solid floats freely upon it.—*Boyle*, vol. vi. p. 482. (Rich.)

Hydrótic. *s.* Hydragogue, the latter being the *commoner* term; purger of water or phlegm.

He seems to have been the first who divided purges into *hydroticks* and purgers of bile.—*Arbuthnot, Tables of ancient Coins, Weights, and Measures.*

Hýen. *s.* Hyena. *Rare, or a misprint.*

I will weep when you are disposed to be merry; I will laugh like a *hyen*, when you are inclined to sleep.—*Shakespear, As you like it*, iv. 1.

Hyéna. *s.* [Gr. ὕαινα.] Animal so called.

A wonder more amazing would we find;
The *hyena* shews it, of a double kind:
Varying the sexes in alternate years,
In one begets, and in another bears.
Dryden, Fables.

The *hyena* was indeed well joined with the bever, as having also a bag in those parts, if thereby we understand the *hyena* odorata, or civet cat.—*Sir T. Browne, Vulgar Errours.*

The keen *hyena*, fellest of the fell. *Thomson.*

Hýetográphical. *adj.* Connected with Hyetography.

Independent of anomalies, we observe that the amount of rain diminishes as we recede from the equator. This fact has led meteorologists to divide ... our globe into *hyetographical* regions.—*D. P. Thompson, Introduction to Meteorology*, § 159.

Hýetográphy. *s.* [Gr. ὑετὸς = rain + γράφω = describe.] Description of the phenomena and causes of rain-fall.

The rain-gauge ... one of the most important instruments in *hyetography*.—*D. P. Thomson, Introductim to Meteorology.*

Hygiéne. *s.* [Gr. ὑγεία = goddess of health, health.] See extract.

Hygienic remedies are [the] remedies derived from the department of *hygiene*. Under the absurd name of non-naturals the ancients included six things necessary to health; but which, by accident or abuse, often became the cause of disease, viz., Air, Aliment, Exercise, Excretions, Sleep, and Affections of the mind. These are now denominated *hygienic* agents.—*Pereira, Elements of Materia Medica and Therapeutics*, p. 60: ed. 1849.

Hygiénic. *adj.* Relating to, connected with, constituted by, consisting in, hygiene: (often opposed to Therapeutic).

(For example see preceding entry).

Hygiénical. *adj.* Same as Hygienic.

Things relating to the *hygienical* part of physic.—*Boyle*, vol. ii. p. 103. (Rich.)

Hygrólogy. *s.* [Gr. λόγος.] Doctrine of the phenomena and causes of the moisture of the atmosphere.

[On the sea] we approach the chief problems of *hygrology* in their least complicated form.—*Sir J. F. W. Herschel, Manual of Scientific Enquiry*, sect. ix.: Meteorology.

Hygrómeter. *s.* [Gr. ὑγρος = wet, moist, and μέτρον, *s.*, μετρέω, *v.* = measure.] Instrument to measure the degrees of moisture.

I have news from Paris ... that a friend of his has found out a very sensible *hygrometer*, which, besides marking the moistness of the air, will also be improved to wind up a pendulum: which, if it succeeds, will be a kind of perpetual motion.—*Boyle*, b. vi. 540. (Rich.)

A sponge, perhaps, might be a better *hygrometer* than the earth of the river.—*Arbuthnot, On the Effects of Air on human Bodies.*

A great many *hygrometers* have been invented; but they may all be referred to three principles. The construction of the first kind of *hygrometer* is founded upon the property of some substances of expanding in a humid atmosphere, owing to a deposition of moisture within them; and of parting with it again in a dry air, and in consequence contracting.... The second kind of *hygrometer* points out the opposite states of dryness and moisture by the rapidity of evaporation.... The third kind of *hygrometer* is on a principle entirely different from the foregoing.... It is desirable on some occasions not merely to know the hygrometric condition of air or gases, but to deprive them entirely of their vapour. —*Turner, Elements of Chemistry*, p. 49–51.

Hýgrométric. *adj.* Relating to, connected with, constituted by, Hygrometry.

It is true that from meteorologic causes, inanimate objects are daily, sometimes hourly, undergoing modifications of temperature, of bulk, of *hygrometric* and electric condition.—*Herbert Spencer, Data of Biology*, § 25.

If, as is manifest, the state of an organism is constantly affected by the state of its environment—if, as we know to be the fact, the changes of temperature, of composition, of *hygrometric* state, in the environment, as also those mechanical actions, and those variations of available nutriment which occur in it, are liable to stop the processes going on in the organism; and if, as is seen in the instances hourly afforded, the changes that take place in the organism have the effect of directly or indirectly counterbalancing these changes in the environment; then, it follows that the life of the organism will be short or long, low or high, according to the extent to which changes in the environment are met by corresponding changes in the organism.—*Ibid.* § 121.

Hygrómetry. *s.* Science and art of determining the atmospheric air or gases; measurement of moisture.

Hygrometer, or *hygroscope* [is] an instrument for measuring the degrees of moisture in the air. *Hygrometry* is the science of the measurement of the moisture of the air, with the principles on which *hygrometers* are constructed. *Hygroscopic* substances have their humidity always proportionable to the places they are in ... *hygrostatic*—belonging to the art of determining the specific weight of most bodies ... *hygrostatics* [is] the science of comparing degrees of moisture.—*Wilkes, Encyclopædia Londinensis.*

Hygroscope. *s.* [Gr. σκοπέω = see, view, spy, observe.] Instrument to show the moisture and dryness of the air, and to measure and estimate the quantity of either extreme.

(For example see under Hygrometry.)

Hygroscópic. *adj.* Having affinity to water.

Hygroscopic substances have their humidity always proportionable to the places they are in.—*Adams.*

Hygróstatic. *adj.* Connected by Hygrostatics.

Hygróstatics. *s.* Hygrology.

(For examples see Hygrometry).

Hylæosaúrus. *s.* [Gr. ὕλαιος = connected with, relating to, wood + σαῦρα = lizard.] In *Palæontology*. See extract; also Ichthyosaurus.

The *hylæosaurus* (or lizard of the Weald) appears to have been a land saurian of very large proportions (probably as much as fifteen feet in length), and covered with scales or dermal plates of moderate size and elliptical shape, which seem to have irregularly covered the skin.—*Ansted, Geology, Introductory, Practical, and Scientific.*

Hylárchical. *adj.* [Gr. ὕλη = wood; and, in a secondary sense, *matter*. In Portuguese *madeira* = wood or timber, is derived from the Latin *materia* = matter. In all the compounds, with the exception of the one which immediately follows (Hylæosaurus), and which is a newly coined word, this secondary meaning prevails, the words in which it occurs belonging to the domain of speculative philosophy.] Presiding over matter.

By this *hylarchical* principle, or plastick nature, so many of the vital motions of the body may be kept in play.—*Halliwell, Melampronæa*, p. 70: 1681.

Hýlozoic. *adj.* [Gr. ζωή = life.] Connected with, relating to, constituted by, the doctrine of Hylozoism.

The numen to which the *hylozoic* corporealist pays all his devotion is a certain blind she-god or goddess called Nature, or the life of matter.—*Cudworth, Intellectual System*, p. 106. (Rich.)

When they [Spinoza and his followers] speak of the intelligence and knowledge of God, they mean to attribute these powers to him in no other sense than the ancient *hylozoicks* attributed them to all matter; that is, that a stone, when it falls, has a sensation and consciousness; but that that consciousness is no cause at all, or power of acting. Which kind of intelligence, in any tolerable propriety of speech, is no intelligence at all. And consequently the arguments that proved the Supreme Cause to be properly an intelligent and active Being, do also undeniably prove that he is likewise indued with liberty and choice; which alone is the power of acting.—*Clarke, On the Attributes*, § 9.

Hylozóical. *adj.* Hylozoic.

There hath been already mentioned another form of Atheism called by us *hylozoical*. — *Cudworth, Intellectual System.* (Rich.)

Hylozóism. *s.* Doctrine by which life, or divine character, was attributed to matter, or the world. See Pantheism.

Hylozoism makes all body, as such, and therefore every smallest atom of it, to have life essentially belonging to it.—*Cudworth, Intellectual System*, p. 105. (Rich.)

Hylozóist. *s.* Supporter of Hylozoism.

And from thence afterward to descend also further to hylozoism ... we ought not to censure every *hylozoist*, professing to hold a deity and a rational soul immortal for a mere disguised atheist or a counterfeit histrionical theist. — *Cudworth, Intellectual System*, p. 106. (Rich.)

Hýmen. *s.* [Gr. ὑμήν = membrane.]

1. God of marriage.

He wore a garland of roses and myrtles on his head, and on his shoulders a robe like an imperial mantle, white and unspotted all over, excepting only that, where it was clasped at his breast, there were two golden turtle-doves that buttoned it by their bills, which were wrought in rubies. He was called by the name of *Hymen*.—*Tatler*, no. 120.

Hymen marched immediately after Love; and, seconding the good inclinations which he had inspired, joined the hands of both armies.—*Addison, Guardian*, no. 152.

2. Virginal membrane.

Hymenéal. *adj.* Connected with Hymen as the god of marriage.

Chorus *hymeneal*,
Or triumphal chant,
Matched with thine would be all
But an empty vaunt ...
A thing wherein we feel there is some hidden want
Shelley, Ode to a Skylark.

Hymenéal. *s.* [Gr. ὑμέναιος.] Marriage song.

For her the spouse prepares the bridal ring,
And her white virgins *hymeneals* sing. *Pope.*

Hymenéan. *s.* Same as Hymeneal.

Here in close recess,
With flowers, garlands, and sweet-smelling herbs,
Espoused Eve deck'd first her nuptial bed,
And heavenly choirs the *hymenæan* sung.
Milton, Paradise Lost, iv. 708.

Hýmenóptera. *s.* [Gr. ὑμήν = membrane, and πτέρον = wing.] In *Entomology*. Name of a class of insect. See extract.

The insects which have four membranous wings simply veined, and crossing each other horizontally when at rest, form the order *Hymenoptera*: they undergo a complete metamorphosis, and include the most useful of insects, e.g. the bee.... The insects which have the anterior pair of wings in the condition of the hemelytra, form the order *Hemiptera*; but certain genera have the dense part of the anterior wings reduced to so small a strip, that they are scarcely distinguishable, except by size, from the posterior pair, and these insects constitute a section of the order termed *Homoptera*.—*Owen, Lectures on Comparative Anatomy*, lect. xvi.

Hymn. *s.* [Gr. ὕμνος.] Encomiastic song, or song of adoration to some superior being.

As I earst, in praise of mine own dame,
So now in honour of thy mother dear,
An honourable *hymn* I eke should frame. *Spenser.*
Our solemn *hymns* to sullen dirges change;
Our bridal flowers serve for a buried corse.
Shakespear, Romeo and Juliet, iv. 5.
When steel grows
Soft as the parasite's silk, let *hymns* be made
An overture for the wars. *Id., Coriolanus*, i. 9

There is an *hymn* sung; but the subject of it is always the praises of Adam, and Noah and Abraham, concluding ever with a thanksgiving for the nativity of our Saviour.—*Bacon.*

Farewel, you happy shades,
Where angels first should practise *hymns*, and string
Their tuneful harps, when they to Heav'n would sing. *Dryden.*

Hymn. *v. a.* Praise in song; worship with hymns.

Whose easier business were to serve their Lord
High up in heaven, with songs to *hymn* his throne. *Milton, Paradise Lost*, iv. 943.

Alexander came to a city called Nysa, which boasted of Dionysus as its founder, and, as evidence of the fact, showed the ivy and laurel which he had planted.... And near the city was the mountain which he had named Meros, or Meru, in memory of his marvellous birth. The Macedonians, it is said, made a pilgrimage to the mountain, wove themselves chaplets of the ivy that grew in the thickets on its sides, and joyfully *hymned* the heart-cheering Power.—*Bishop Thirlwall, History of Greece*, ch. iii.

Hymn. *v. n.* Sing songs of adoration.

They touch'd their golden harps, and *hymning* prais'd
God and his works. *Milton, Paradise Lost*, vii. 958.

He had not left alive this patient saint,
This anvil of affronts, but sent him hence
To hold a peaceful branch of palm above,
And *hymn* it in the quire. *Dryden, Spanish Friar.*

Hýmnic. *adj.* Relating to hymns.

Where she (faire ladie) tuning her chaste layes
Of England's empresse to her *hymnicke* string. *Mirrour for Magistrates*, p. 773.

He rounds the air, and breaks the *hymnick* notes
In birds, heaven's choristers, organick throats. *Donne*

Hýmning. *verbal abs.* Song, or music, consisting of hymns; choir engaged on hymns.

Thus they in heaven above the starry sphere
Their happy hours in joy and *hymning* spent. *Milton, Paradise Lost*, iii. 416.

Hymnólogy. *s.* [Gr. λόγος = word, doctrine, principle.] System, collection, or arrangement, of hymns (specially church music).

That *hymnologie* which the primitive church used at the offering of bread and wine for the eucharist. —*Mede, Diatribe*, p. 56.

Even in the *hymnology* of the Latin church, her lyric poetry, it is remarkable, that, with the exception of the Te Deum, those hymns, which have struck, as it were, and cloven to the universal heart of Christendom, are mostly of a late period.... Much of it, no doubt, like the lyric verse of the Greeks, was twin-born with the music; it is inseparably wedded with the music; its cadence is musical rather than metrical. It suggests, as it were, the grave full tones of the chant, the sustained grandeur, the glorious burst, the tender fall, the mysterious dying away of the organ. It must be heard, not read. Decompose it into its elements, coldly examine its thoughts, its images, its words, its versification, and its magic is gone.... Its profound religiousness has a charm to foreign ears, wherever there is no stern or passionate resistance to its power. In fact, all *hymnology*, vernacular as well as Latin, is poetry only to predisposed or habituated ears.—*Milman, History of Latin Christianity*, b. xiv. ch. iv.

Hyoíd. *adj.* and *s.* [like ʏ, the form of the Greek letter Υ, u-psilon.] In *Anatomy.* Bone so called; in man, the bone between those of the lower jaw and the collar-bones, i.e. the bones of the throat chiefly supporting the root of the tongue.

In the *hyoid* bone, simple as its form is in man, there are no fewer than five centres of ossification, one for the body, one for each of the great cornua, and one for each of the lesser cornua.—*Carpenter, Principles of Physiology.*

Hyoídeal. *adj.* Connected with the hyoid bone.

(For example see under Howler.)

Hyoscýamus. *s.* [Lat. from Greek ὗς, ὑός = sow, swine, and κύαμος = bean.] Henbane; for which it is the medical term.

The treatment should consist mainly of attention to the digestive functions and state of the bowels; to the exhibition of quinine with camphor and *hyoscyamus*, the preparations of bark with the alkalies of mineral acids, or the preparations of iron; and to the external application of the terebinthinate epithem or embrocation already noticed. —*Copland, Dictionary of Practical Medicine.*

Hyp-, Hypo-, and **Hyper-.** The first of these forms is merely an abbreviation of the second, which is used when the word which follows begins with a vowel. It is the Greek for *under*. *Hyper*, on the other hand, is the Greek for *over*. Word for word, they are the same as the Latin *sub* and *super*, to which the remarks here made may be extended. With all four the import, as the element of a compound, is of a twofold character. The word meaning *under* or *over* may be—

1. Purely and simply a Preposition or Adverb of place, as it is in such English words as *underground, overhead.* Or it may—

2. Denote degree, as in such English combinations as *under-done, over-done.*

Hypállage. *s.* [Gr. from root of ὑπαλλάσσω = leave under.] Figure by which words change their cases, tenses, or relations with each other.

Now these graces he requireth as carefully to be kept as providently gotten, admonishing that they forsake us not, speaking by an *hypallagy*, he gives us a caveat that we forsake not them and withall noteth how readie to bee gone from us.—*Claver, On Proverbs*, p. 33. (Ord MS.)

Hyperáspist. *s.* [Gr. ἀσπιστής = shield-bearer, ἀσπίς = shield.] Defender.

I appeal to any indifferent reader, whether C. M. be not by his *hyperaspist* forsaken in the plain field. —*Chillingworth, Works*, p. 26: ed. 1704.

The *hyperaspists* of the ancients bestrode their fellows fallen in battle, and covered them with their shields.—*Warburton, Note on Macbeth.*

Hypérbaton. *s.* [Gr.; root of βαίνω = go.] Figure in writing, when the words are transposed from the plain grammatical order.

If your meaning be with a violent *hyperbaton* to transpose the text.—*Milton, Animadversions upon a Defence of the Humble Remonstrance.*

The words are at times so transposed as to create an *hyperbaton*.—*Durell, Critical Remarks on Job*, preface.

Hypérbola. *s.* [Gr.; root of βάλλω = throw; the Latin rather than the Greek form.] See extract.

[A *hyperbola*] in geometry [is] a section of a cone made by a plane, so that the axis of the section inclines to the opposite leg of the cone, which in the parabola is parallel to it, and in the ellipsis intersects it. The axis of the hyperbolical section will meet also with the opposite side of the cone, when produced above the vertex.—*Harris.*

Had the velocities of the several planets been greater or less than they are, or had their distances from the sun, or the quantity of the sun's matter, and consequently his attractive power been greater or less than they are now, with the same velocities, they would not have revolved in concentrick circles, but have moved in *hyperbolas* very eccentrick.—*Bentley.*

A conic section is the locus of a point, whose distances from a fixed point and a straight line, given in position, are to each other in a constant ratio, ... [the ratio] may be either a ratio of equality, or of lesser or greater inequality.... The *hyperbola* is the locus of a point, whose distance from the focus is always greater, in a given ratio, than its distance from the directrix.—*Encyclopædia Metropolitana, Conic Sections.*

Hýperbole. *s.* [see Hyperbola; the Greek rather than the Latin form.] Figure in rhetoric by which anything is increased or diminished beyond the exact truth: (as, 'He runs faster than lightning').

Terms unsquar'd,
Which, from the tongue of roaring Typhon dropt,
Would seem *hyperboles*. *Shakespear, Troilus and Cressida*, i. 3.

Taffata phrases, silken terms precise,
Three-pil'd *hyperboles*, spruce affectation,
Figures pedantical, these summer flies,
Have blown me full of maggot ostentation. *Id., Love's Labour's lost*, v. 2.

Hyperboles, so daring and so bold,
Disdaining bounds, are yet by rules controll'd!
Above the clouds, but yet within our sight,
They mount with truth, and make a tow'ring flight. *Granville.*

The common people understand raillery, or at least rhetorick, and will not take *hyperboles* in too literal a sense.—*Swift.*

The *hyperbole* of Juliet seemed to be verified with respect to them. 'Upon their brows shame was ashamed to sit.'—*Macaulay, Critical and Historical Essays, Lord Bacon.*

Hýperbólic. *adj.* Belonging to the hyperbola; having the nature of a hyperbola.

Look upon vices and vicious objects with *hyperbolical* eyes, and rather enlarge their dimensions, that their unseen deformities may not escape thy sense.—*Sir T. Browne, Christian Morals*, iii. 3.

It is parabolical, and probably *hyperbolical*, and therefore not to be taken in a strict sense.—*Boyle.*

'Perhaps,' says Salfi, 'with the exception of Ariosto, no one has been more a poet by nature than he [Marini], a praise, however, which may justly seem *hyperbolical* to those who recall their attention to the highest attributes of poetry.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. iii. ch. v. § 6.

Hypérbolism. *s.* Hyperbolical character.

Some particular expressions are found in it, which, with all the allowance that can be made for the *hyperbolism* of the oriental style, are not easily applicable to the parties, even in a royal marriage.— *Bishop Horsley, Sermons.* (Ord MS.)

Hypérbolist. *s.* One who hyperbolizes.

I cease to think the Psalmist an *hyperbolist* for comparing the transcendent sweetness of God's Word to that inferiour one of honey, which is like it in nothing more, than in that of both their suavities experience gives much advantageouser notions than descriptions can.—*Boyle, On the Style of Holy Scripture*, p. 253.

Hypérbolize. *v. n.* Speak or write with exaggeration or extenuation.

You have heard... how some of the ancientest fathers do speak, and how they *hyperbolize* sometimes, in some points, in their popular sermons.— *Bishop Mountagu, Appeal to Cæsar*, p. 260: 1625.

The Spanish traveller was so habituated to *hyperbolize*.—*Howell, Instructions for foreign Travel*, p. 178.

Hyperbórean. *adj.* [Lat. and Gr. *Boreas* = the north wind; God of the North Wind; a *proper* rather than a *common* name.] Northern.

Another propertie of an excellent language is the generalitie or large extent thereof; wherein no tongue within Christendome may compare with ours. For the Germane, of whom our fathers (the Saxons, Juites, and Angles,) are a part, have spred themselves, and their Teutonick tongue, (though in divers dialects, which time hath caused,) thorow all High and Low Germanie, their primarie habitation; but also in divers other countries, where their victorious hand, enlarging still their territories, hath seated them; as in Denmarke, Suedland, Lapland, Finland, Gotland, Norwey, England, and the East Part of Scotland, even from Barweeke to the Orcades, now the Isles of Orkney; which the very language, differing but little in dialect from the Northern or older English, doeth shew. And therefore the Highland or Westerne Scots, (which indeede are the right Scots, speaking the Scottish or Irish tongue,) doe call the Easterlings or Lawland-men (as the Welch doe us) Sassons or Saxons. Likewise in the other Northern Isles; as Groenland, Freesland, Iseland, &c. even to the *hyperborean* or frozen sea. Neither onely these Northerne parts, but the South countries also, whereseever they set their foote, have yeelded to their puissance: as France, subdued by their Franks and Normans; Africk, overrun by their Vandals; and Italie, by their Lombards, Gothes, and Vandals: though in these parts their language be mixt and much corrupted with the speeche of the conquered people, whom they suffered to remaine among them.—*Butler, English Grammar*, 1633.

The body moulded by the clime endures
The Equator heats and *hyperborean* frosts. *Armstrong.*

The *hyperborean* ice he wander'd o'er,
And solitary roam'd round Tanais' shore. *J. Warton, Translation from Virgil.*

The rough and full-mouthed pronunciation of the High-Germanic tongues... may be the natural produce of the bracing air of the South; the clearer and neater pronunciation of the Low-Germanic ones, that of the milder influences of the plain; the thinner and sharper sounds of the Scandinavian group, that of the more chilly and pinching *hyperborean* atmosphere in which they have grown up and been formed.—*Craik, History of the English Literature and the English Language*, vol. i. p. 6.

Hypercrític. *s.* Critic exact or captious beyond use or reason.

Those *hypercriticks* in English poetry differ from the opinion of the Greek and Latin judges, from the Italians and French, and from the general taste of all ages.—*Dryden.*

Hypercrítical. *adj.* Critical beyond necessity or use.

We are far from imposing those nice and *hypercritical* punctilios, which some astrologers oblige our gardeners to.—*Evelyn.*

Such *hypercritical* readers will consider my business was to make a body of refined sayings, only taking care to produce them in the most natural manner.—*Swift.*

Hyperdúlia. *s.* [Gr. δουλεία = slavery, service, servitude; δοῦλος = slave.] Superior kind of service, among the Romanists, to the Virgin Mary.

From whom our Romanists did first learn their *hyperdulia*, or transcendant kind of service, wherewith they worship the Virgin Mary.—*Archbishop Usher, Answer to the Jesuit Malone*, p. 356.

Hýperduly. *s.* English form of the preceding.

Call you this devotion, as you please, whether duly or *hyperduly*.—*Brevint, Saul and Samuel at Endor*, p. 352.

Hýperesthésia. *s.* [Gr. αἴσθησις = sensation.] In *Physiology* and *Psychology*. Exalted sensation.

In these cases, such is the morbid peripheral acuteness of sensibility, that the minimum portion of cold wind, or even the faintest breath of air from the mouth, coming in contact with the cutaneous surface of the *hydrophobic* patient, has often induced a fearful paroxysm of spasmodic suffering. In cases of acute visceral inflammation involving some of the ganglia of the great sympathetic, the general sensibility has become keenly acute. In certain hysterical affections of women the sensation is often intensely manifested. To such a degree has this *hyperæsthesia* been observed, that patients have been known to scream violently when the skin has been only touched. The faintest whisper, suddenly opening the door, or rustle of a newspaper, have been known, in such states of the nervous system, to induce severe conditions of violent convulsive spasm.—*Dr. Forbes Winslow, Obscure Diseases of the Brain and Mind*, ch. xx.

Hypéricon. *s.* In *Botany*. Plant so called; St. John's wort.

Hypericon, called 'fuga dæmonum,' reckoned among sacred-magical plants, on account of the Druids using them.—*Stukeley, Palæographia Sacra*, p. 16.

These are *hyperphysical* opticks, and drawn from the heavens.—*Aubrey, Miscellany*, p. 147.

Hypersarcósis. *s.* Growth of fungous or proud flesh.

Where the *hypersarcosis* was great, I sprinkled it with precipitate, whereby I more speedily freed the ulcer of its putrefaction.—*Wiseman, Surgery.*

Hypértrophy. *v. a.* Overnourish.

Whatever form of unsoundness belong to the heart, the patient's own instinct is continually telling him that he must be still.... [The heart] is sooner *hypertrophied*, sooner attenuated, sooner dilated, and the disturbed blood-vessels sooner betake themselves to congestions, and effusions, and hemorrhages, and inflammations.—*Dr. G. H. Latham, Lectures on Subjects connected with Clinical Medicine*, lect. xxxiv.

Hypértrophy. *s.* [Gr. τροφὴ = nutrition.] Excess of nutrition.

We now come to those affections of the heart which may be usefully classed together under the name of unsoundness from disorganisation. They consist in alterations of size and shape and bulk and capacity, and are the same which are commonly denoted by the terms *hypertrophy*, atrophy, dilatation, and contraction. And I shall continue to use the same terms.... *Hypertrophy* is a simple augmentation, and atrophy is a simple diminution of bulk and consistence in the heart's muscular substance. In *hypertrophy* its muscular substance is more red than natural, its carneæ columnæ are increased in thickness, and its proper fibrous texture is everywhere more strikingly manifest, while there is no interstitial deposition of matter new in its kind. In atrophy its muscular substance is less red than natural, its carneæ columnæ less developed, and its proper fibrous texture less distinguishable. But there is still the appearance of muscle, shrunk and withered as if from an insufficient supply of nourishment.... A few years ago pathological anatomy had come to regard two particular forms of disorganization as the natural opposites of each other, and was fond of using names chosen on purpose to mark their contrast. These names were eccentric *hypertrophy*, and concentric *hypertrophy*. —*Dr. P. M. Latham, Lectures on Subjects connected with Clinical Medicine*, lect. xxvii.

Hýphen. *s.* [Gr. ὑφέν.] Note of conjunction: (as, *vir-tue, ever-living*).

What a sight it is to see writers committed together by the ears for ceremonies, syllables, points, colons, commas, *hyphens*, and the like.—*B. Jonson, Discoveries.*

(See also Preliminary Notices, &c.)

Hypnótic. *s.* [Gr. ὕπνος.] Medicine that induces sleep.

I need no better *hypnotick* to make me sleep.
Sir T. Browne, Religio Medici.

He writes, as an *hypnotick* for the spleen.
Young, Epistle to Pope.

Hýpocaust. *s.* [Gr. καυστὸς = burnt.] Subterraneous chamber, or stove, in which was a furnace that served to heat the baths of the Greeks and Romans; and in modern times applied to the place which keeps warm a stove or hothouse.

The apartments on the east side ... were probably warmed by the *hypocaust*.—*Lysons, Antiquities.*

Hypochóndres. *s.* often *plural.* [Gr. χόνδρος = cartilage.] Parts on each side of the body, in front, lying under the cartilages of the ribs.

The blood moving too slowly through the celiack and mesenterick arteries, produce various complaints in the lower bowels and *hypochondres*; from whence such persons are called hypochondriack.—*Arbuthnot, On the Nature and Choice of Aliments.*

Hypochóndria. *s.* Same as Hypochondriasis.

Will Hazard was cured of his *hypochondria* by three glasses.—*Tatler*, no. 231. (Ord MS.)

Moping here did *Hypochondria* sit,
Mother of spleen, in robes of various dye,
Who vexed was full oft with ugly fit,
And some her frantick deem'd, and some her deem'd a wit.
Thomson, Castle of Indolence.

Hypochóndria. *s. pl.* Greek form of Hypochondres.

In the description of symptoms we are often obliged to speak of particular portions of the abdomen; and it will be of future convenience to us if we make ourselves acquainted at starting with such a superficial map, marking out the topography of the belly.... Draw a horizontal line round the body touching the extremity of the ensiform cartilage.... Draw another such ... horizontally, touching the lower edge of the false rib; and a third touching the crest of each ilium. We have then three horizontal zones formed. These must be further subdivided by vertical lines; one on each side from the anterior spinous process of the ilium perpendicularly upwards. Each zone will be thus divided into three regions. The middle region of the upper zone is the epigastric region; on either side are the *hypochondria*. The middle region of the middle zone is the umbilical region; the iliac region, or the flanks, lie to the right and left of it. The *hypogastric* region is the middle region of the lowermost zone; and the inguinal regions are contiguous to it.—*Watson, Lectures on the Principles and Practice of Physic*, lect. lxv.

Hypochóndriac. *adj.* Melancholy; disordered in the imagination; suffering from Hypochondriasis.

Such is the *hypochondriac*, melancholy complexion of us islanders, that we seem made of butter, every accident makes such a deep impression upon us.—*Bishop Berkeley, Letters, Life, &c.*, p. 182: 1746.

Hypochóndriac. *s.* One who is melancholy, or disordered in imagination; sufferer from Hypochondriasis.

How the humours of the body arrive at an ability thus to impregnate the mind with conceits wild and monstrous beyond the varieties of Africa, is an enquiry not pertinent here; but to question that so they can, is to speak ourselves strangers to all the stories of *hypochondriacks* [which] books and discourses abound withal.—*Spencer; On Vulgar Prophecies*, p. 98: 1665.

Socrates laid down his life in attestation of that most fundamental truth, the belief of one God; and yet he's not recorded either as fool or *hypochondriack*.—*Dr. H. More, Decay of Christian Piety.*

Sir Henry Holland has well observed that the *hypochondriac*, by fixing his consciousness with morbid intentness on different organs not merely creates disordered sensations in them but disordered actions.—*Dr. T. H. Tanner, Practice of Medicine*, p. 322.

Hypochondríacal. *adj.* Hypochondriac (*adj.*).

A streightness of breath, which I should be glad to know whether you observe in other *hypochondriacal* patients.—*Sir H. Wotton, Remains*, p. 366.

Cold sweats are many times mortal, and always suspected; as in great fears, and *hypochondriacal* passions, being a relaxation or forsaking of the spirits.—*Bacon, Natural and Experimental History.*

Hypochóndriacally. *adv.* In a hypochondriacal manner.

Feelings of uneasiness, or even pain, originate in the mind a suspicion of disease existing in particular parts of the body; it may be the lungs, stomach, heart, brain, liver, or kidneys. Slight irregularities, and functional disturbances, in the action of these organs being noticed, are at once suggestive to the mind, *hypochondriacally* disposed, of serious and fatal disease, progressing in the part to which the attention is conveyed.—*Dr. Forbes Winslow, Obscure Diseases of the Brain and Mind*, p. 265.

Hypochondríacism. *s.* Melancholy; disordered imagination: (Hypochondriasis *commoner*).

In *hypochondriacism* the insanity not being formed, there is for the most part a capacity for action.—*Johnstone, On Madness*, p. 25.

Hypochondríasis. *s.* Hypochondriac affection or passion.

Mental affections produce *hypochondriasis*, by creating a disorder in the stomach and intestines, and in the nervous system.—*Chrichton, On Mental Derangement*, p. 200.

Hypochondriasis [is] chronic indigestion, with languor, flatulency, dejection of mind, and fear arising from inadequate causes; general exaltation of sensibility; a rapid succession of morbid phenomena, simulating numerous diseases:—or otherwise a real, but variable state of suffering, exaggerated by the morbid sensibility and fears of the patient, with unsteadiness of purpose, and distressing anxiety respecting his complaints. *Hypochondriasis* has been very differently arranged by nosological writers. Vogel placed it among spasmodic diseases, and Cullen, much more correctly, in that order of nervous complaints which depend upon defective vital power.—*Copland, Dictionary of Practical Medicine.*

Hypochóndry. *s.* One of the two regions called hypochondres.

If from the liver, there is usually a pain in the right *hypochondry*; if from the spleen, hardness and grief in the left *hypochondry*.—*Burton, Anatomy of Melancholy*, p. 200.

Envy swells the *hypochondries*, which, by drinking up the nourishment of the neighbouring parts, makes the whole body lean and meager.—*Scott, Christian Life*, pt. iii. ch. iii.

Hýpocist. *s.* [Gr. κίστος; Lat. *cistus*: plant so called, *gum-cistus*.] See extract. *Obsolete.*

Hypocist is an inspissated juice, considerably hard and heavy, of a fine shining black colour, when broken. The stem of the plant is thick and fleshy; and much thicker at the top than towards the bottom. The fruits contain a tough glutinous liquor, gathered before they are ripe: the juice is expressed, then formed into cakes.—*Sir J. Hill.*

Hypócrisy. *s.* Dissimulation with regard to the moral or religious character.

Laying aside all malice, and all guile, and *hypocrisies*—1 *Peter*, ii. 1.

Next stood *hypocrisy* with holy leer,
Soft smiling and demurely looking down;
But hid the dagger underneath the gown.
Dryden, Fables.

Hypocrisy is much more eligible than open infidelity and vice: it wears the livery of religion, and is cautious of giving scandal: nay, continued disguises are too great a constraint: men would leave off their vices, rather than undergo the toil of practising them in private.—*Swift.*

Hýpocrite. *s.* [Gr. ὑποκριτής.]

1. Dissembler in morality or religion.

He heartily prays some occasion may detain us longer: I dare swear he is no *hypocrite*, but prays from his heart.—*Shakespear, Much Ado about Nothing*, i. 1.

A wise man hateth not the law; but he that is an *hypocrite* therein, is as a ship in a storm.—*Ecclesiasticus*, xxxiii. 3.

Fair *hypocrite*, you seek to cheat in vain;
Your silence argues, you ask time to reign. *Dryden.*

The making religion necessary to interest might increase hypocrisy; but if one in twenty should be brought to true piety, and nineteen be only *hypocrites*, the advantage would still be great.—*Swift.*

2. Dissembler.

Ye honest men, beware,
Nor trust its smoothness; the third circling glass
Suffices virtue; but may *hypocrites*,
Who slily speak one thing, another think,
Hateful as hell, still pleas'd unwarn'd drink on,
And through intemp'rance grow awhile sincere.
J. Philips, Cyder, b. ii.

Hypocritely. *adv.* Hypocritically. *Rare.*

He is rehard'ned, like a stubborn boy,
That plies his lesson, *hypocritely* coy,
While in his hand his master shakes the rod;
But if he turns his back, doth flout and nod.
Sylvester, Du Bartas, 169. (Ord MS.)

Hypocritic. *adj.* Dissembling; insincere; appearing differently from the reality.

Let others screw their *hypocritick* face.—*Swift.*

Hypocritical. *adj.* Same as preceding.

Now you are confessing your enormities; I know it by that *hypocritical* down-cast look.—*Dryden, Spanish Friar.*

Whatever virtues may appear in him, they will be esteemed an *hypocritical* imposture on the world; and in his retired pleasures, he will be presumed a libertine.—*Rogers.*

Hypocritically. *adv.* In a hypocritical manner; with either simulation or dissimulation; without sincerity; falsely.

Simeon and Levi spake not only falsely, but insidiously, nay *hypocritically*, abusing at once their proselytes and their religion.—*Dr. H. More, Government of the Tongue.*

Hypocritish. *adj.* Hypocritical. *Rare.*

We perceyve that Jesus read things in the *hypocritish* hearts of the pharisees.—*Trewness of Christian Religion.* (Ord MS.)

(See also Hypochondria, *s. pl.*)

Hypogéne. *adj.* [Gr.; root of γέν-ος = race, kind; γεννάω = beget.] See extract.

All the rocks that have been described in the present chapter, together with others which I have now thought it necessary to allude to, are sometimes spoken of as one group, under the name *hypogene*, or Plutonic . . . *hypogene*, an expression introduced by Mr. Lyell, involves to a certain extent the reception of a theory which well deserves notice. . . . Mr. Lyell proposes to include under the one name *hypogene* all those unstratified rocks which offer no appearance of mechanical origin, together with those large classes of stratified rocks which do not contain at present any mark of organic remains, owing to changes which are assumed to have taken place in their intimate structure since their original deposition.—*Ansted, Geology, Introductory, Descriptive and Practical*, vol. ii. p. 186: ed. 1844.

Hypogéum. *s.* [Gr. γῆ = earth.] See extract.

Hypogeum [is] a name which the ancient architects gave to all the parts of a building that were under ground, as cellars and vaults.—*Harris.*

Hypóstasis. *s.* [Gr. ὑπόστασις = under + standing; element for element, it is the same as Sub-stance, Under-standing; but it is also a *theological* rather than a *metaphysical* term.] See extracts.

1. Personality: (a term used in the doctrine of the Holy Trinity).

The oneness of our Lord Jesus Christ, referring to the several *hypostases* in the one eternal, indivisible, divine nature, and the eternity of the Son's generation, and his co-eternity and consubstantiality with the Father, are assertions equivalent to those comprised in the ancient simple article.—*Hammond.*

What was precisely the notion which these Latin Fathers intended to convey, and how far it approached the classical signification of the word 'Persona,' it may not be easy to determine. But we must presume that they did not intend to employ it in what is, now, the ordinary sense of the word Person; both because 'Persona' never, I believe, bore that sense in pure Latinity, and also because it is evident that, in that sense, 'three *divine* Persons' would have been exactly equivalent to 'three Gods;' a meaning which the orthodox always disavowed. It is probable that they had nearly the same view with which the Greek theologians adopted the word *Hypostasis*; which seems calculated to express 'that which stands under (i. e. the Subject of) Attributes.' They meant, it may be presumed, to guard against the suspicion of teaching, on the one hand, that there are three Gods, or three Parts of the one God; or, on the other hand, that Father, Son, and Holy Ghost are no more than three Names, all of the same signification. . . . It is perhaps to be regretted that our Divines, in rendering the Latin 'Persona,' used the word Person, whose ordinary sense, in the present day at least, differs in a most important point from the theological sense, and yet is not so remote from it as to preclude all mistake and perplexity. If '*Hypostasis*,' or any other completely foreign term had been used instead, no idea at all would have been conveyed except that of the explanation given; and thus the danger at least of being misled by a word, would have been avoided. . . . It is worth observing, as a striking instance of the little reliance to be placed on etymology as a guide to the meaning of a word that '*Hypostasis*,' 'Substantia,' and 'Understanding,' so widely different in their sense, correspond in their etymology. — *Archbishop Whately, Elements of Logic*, appendix i., Ambiguous Terms, Person.

2. In *Medicine.* Sediment of urine.

Here's an *hypostasis* argues a very bad stomach.—*Nabbes, Microcosmus.*

Hypostátical. *adj.*

1. Constitutive; constituent as distinct ingredients.

Let our Carneades warn men not to subscribe to the grand doctrine of the chymists, touching their three *hypostatical* principles, till they have a little examined it.—*Boyle.*

2. Personal; distinctly personal.

Beside that grounded upon the *hypostatical* union; beside that glorious condition upon his resurrection; there was yet another and that more proper ascension.—*Bishop Pearson, On the Creed*, art. vi.

Hypostátically. *adv.* Personally.

That they should see all things and transactions, hear all prayers and orations, 'in speculo divinitatis,' is alike incredible; a thing which the humanity of Christ himself, though *hypostatically* united to the divinity, did not pretend to.—*Dr. H. More, Antidote against Idolatry*, ch. ii.

Hypótenuse. *s.* [Gr. ὑποτείνουσα, second aorist participle of ὑποτείνω = stretch, γραμμὴ = line, a substantive of the feminine gender, being understood; hence the participle itself is feminine.] Line that subtends the right angle of a right-angled triangle.

The square of the *hypotenuse* in a right-angled triangle, is equal to the squares of the two other sides.—*Locke.*

Hypótheca. *s.* [Gr. θήκη = case, keeping-place; from root of τί-θη-μι = put.] See extract.

Hypotheca in the civil law was where the possession of the thing pledged remained with the debtor. —*Jacob, Law Dictionary.*

Hypothecárious. *adj.* Relating to, constituted by, a Hypotheca.

Though a real or *hypothecarious* action does not lie against a feudal estate, yet a personal action lies to compel the heir to satisfy and discharge all such incumbrances as the testator shall lay on such hereditary fief.—*Ayliffe, Parergon Juris Canonici*, p. 337. (Ord MS.)

Hypóthecate. *v. a.* [Lat. *hypotheca.*] Pawn; give in pledge.

Whether they to whom this new pledge is *hypothecated* have redeemed their own . . . I leave it to those who recollect that memorable debate to determine.—*Burke, On a Regicide Peace.*

To *hypothecate* a ship is to pawn the same for necessaries; and a master may *hypothecate* either ship or goods for relief when in distress at sea; for he represents the traders as well as the owners; and in whose hands soever a ship or goods *hypothecated* come, they are liable.—*Jacob, Law Dictionary.*

He had found the treasury empty and the pay of the navy in arrear. He had no power to *hypothecate* any part of the public revenue. Those who lent him money lent it on no security but his bare word. It was only by the patriotic liberality of the merchants of London that he was enabled to defray the ordinary charges of government till the meeting of the convention.—*Macaulay, History of England*, ch. xii.

Hypothéque. *s.* Same as Hypotheca.

An execution cannot in civil causes proceed to a man's bed, wearing apparel, and other things of the like kind, necessary to his daily use; because these things do not pass under an *hypotheque*; nor are a man's wearing clothes taken away from him, though condemned to dye as a criminal; but when a debtor has no other goods to satisfy the judgment, his household goods and bed are liable to an execution; and only his wearing apparel on his back shall be left him.—*Ayliffe, Parergon Juris Canonici*, p. 272. (Ord MS.)

Hypóthesis. *s.* [Gr. θέσις = placing, position.] System formed upon some principle not proved as a fact or phenomenon of itself, but assumed because it accounts, or is supposed to account, for certain results; provisional cause or force.

The mind casts and turns itself restlessly from one thing to another, till at length it brings all the ends of a long and various *hypothesis* together; sees how one part coheres with another, and so clears off all the appearing contrarieties that seemed to lie cross, and make the whole intelligible.—*South, Sermons.*

What imagin'd sovereignty
Lord of his new *hypothesis* he reigns:
He reigns: how long? till some usurper rise;
And he too, mighty thoughtful, mighty wise,
Studies new lines, and other circles feigns. *Prior.*

To this *hypothesis* of a double ether he was driven by his aversion to admit any vacuum in nature; the rotundity of the former corpuscles having been produced, as he fancied, by their continual circular motions, which had rubbed off their angles. This seems at present rather a clumsy *hypothesis*, but it is literally that which Descartes presented to the world.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth and seventeenth Centuries*, pt. iii. ch. viii. § 34.

An *hypothesis* being a mere supposition, there are no other limits to *hypotheses* than those of the human imagination; we may, if we please, imagine, by way of accounting for an effect, some cause of a kind utterly unknown, and acting according to a law altogether fictitious. But as *hypotheses* of this sort would not have any of the plausibility belonging to those which ally themselves by analogy with known laws of nature, and besides would not supply the want which arbitrary *hypotheses* are generally invented to satisfy, by enabling the imagination to represent to itself an obscure phenomenon in a familiar light; there is probably no *hypothesis* in the history of science in which both the agent itself and the law of its operation were fictitious. Either the phenomenon assigned as the cause is real, but the law according to which *it* acts, merely supposed; or the cause is fictitious, but is supposed to produce its effects according to laws similar to those of some known class of phenomena. . . . *Hypotheses* of the second kind are such as the vortices of Descartes, which were fictitious, but were supposed to obey the known laws of rotatory motion; or the two rival *hypotheses* respecting the nature of light, the one ascribing the phenomena to a fluid emitted from all luminous bodies, the other (now more generally received) attributing them to vibratory motions among the particles of an ether pervading all space. —*J. S. Mill, System of Logic*, iii. xiv. induct.

It appears, then, to be a condition of a genuinely scientific *hypothesis*, that it be not destined always to remain an *hypothesis*, but be of such a nature as to be either proved or disproved by that comparison with observed facts which is termed verification. This condition is fulfilled when the effect is already known to depend on the very cause supposed, and the *hypothesis* relates only to the precise mode of dependence; the law of the variation of the effect according to the variations in the quantity or in the relations of the cause. With these may be classed the *hypotheses* which do not make any supposition with regard to causation, but only with regard to the law of correspondence between facts which accompany each other in their variations, though there may be no relation of cause and effect between them. Such were the different false *hypotheses* which Kepler made respecting the law of the refraction of light. It was known that the direction of the line of refraction varied with every variation in the direction of the line of incidence, but it was not known how; that is, what changes of the one corresponded to the different changes of the other. In this case any law, different from the true one, must have led to false results.—*Ibid.*, iii. 16.

Hypothétical. *adj.* Including a supposition; conditionally.

Conditional or *hypothetical* propositions are those whose parts are united by the conditional particle 'if'; as, 'if' the sun be fixed, the earth must move. —*Watts.*

According to the foregoing remarks, *hypotheses* are invented to enable the Deductive Method to be earlier applied to phenomena. But in order to discover the cause of any phenomenon by the Deductive Method, the process must consist of three parts; induction, ratiocination, and verification. . . . Now, the *Hypothetical* Method suppresses the first of the three steps, the induction to ascertain the law; and contents itself with the other two operations, ratiocination and verification; the law, which is reasoned from, being assumed, instead of proved. This process may evidently be legitimate on one supposition, namely if the nature of the case be such that the final step, the verification, shall amount to, and fulfil the conditions of, a complete induction. We want to be assured that the law we have *hypothetically* assumed is a true one; and its leading deductively to true results will afford this assurance, provided the case be such that a false law cannot lead to a true result; provided no law, except the very one which we have assumed, can lead deductively to the same conclusion which that leads to. And this proviso is often realized. . . . Newton began by an assumption, that the force which at each instant deflects a planet from its rectilineal course, and makes it describe a curve round the sun, is a force tending directly towards the sun. He then proved that if this be so, the planet will describe, as we know by Kepler's first law that it does describe, equal areas in equal times; and lastly, he proved that if the force acted in any other direction whatever, the planet would not describe equal areas in

equal times. It being thus shown that no other hypothesis would accord with the facts, the assumption was proved; the *hypothesis* became an inductive truth. Not only did Newton ascertain by this *hypothetical* process the direction of the deflecting force; he proceeded in exactly the same manner to ascertain the law of variation of the quantity of that force.—*J. S. Mill, System of Logic*, iii. xiv.

Hypothétically. *adv.* In a hypothetical manner; upon supposition; conditionally.

The only part liable to imputation is calling her a goddess; yet this is proposed with modesty and doubt, and *hypothetically*.—*Broome, Notes on Pope's Odyssey.*

Hýrax. *s.* In *Zoology.* See extract.

When we find the daman, an animal not much bigger than a hare, placed with the elephant and the hippopotamus, we involuntarily start.... The damans of North and South America, which, whether one or two species, constitute the genus *hyrax* in their anatomical peculiarities, are remarkably assimilated to the rhinoceros and tapir.... The Dutch colonists at the Cape call the South African, or Cape *hyrax*, klip-daassie or the rock badger.... Herman was the first to separate it generically under the name *hyrax* (ὕραξ, mouse of the Etolians), a far-fetched etymology, which was adopted by Schreber and Gmelin, though they kept the new genus in the order Rodentia. It is obvious, therefore, that the daman is one of those animals which is intermediate between two or more genera.... The *hyrax* found in Abyssinia... is considered by the Baron Cuvier as specifically the same.—*Translation of Cuvier's Règne Animal.*

Hýson. *s.* [Chinese.] Kind of tea so called.

Dawkins, a dealer once, on burthened back
Bore his whole substance in a pedlar's pack;
To dames discreet, the duties yet unpaid,
His stores of lace and *hyson* he conveyed.
Crabbe, The Parish Register.

Hýssop. *s.* [Lat. *hyssopus.*] Plant so called.

It hath been a great dispute, whether the *hyssop* commonly known is the same which is mentioned in Scripture.—*Miller.*

The *hyssop* of Solomon cannot be well conceived to be our common *hyssop*; for that is not the least of vegetables observed to grow upon walls; but rather some kind of capillaries, which only grow upon walls and stony places.—*Sir T. Browne.*

Hystéria. *s.* [Gr. *ὑστερία*, from *ὑστέρα* = womb.] Nervous disorder, chiefly affecting females, so called.

Hysteria [is] a nervous disorder, often assuming the most varied forms, but commonly presenting a paroxysmal character; the attacks usually commencing with a flow of limpid urine, with uneasiness or irregular motions, and rumbling noises in the left iliac region, or the sensation of a ball rising upwards to the throat, frequently attended by a feeling of suffocation, and sometimes with convulsions; chiefly affecting females from the period of puberty to the decline of life, and principally those possessing great susceptibility of the nervous system and of mental emotion. Under this definition may be arranged all those disorders which, from their varied and changing forms, and their resemblance to many serious, and even to several dangerous or structural diseases, have puzzled and misled the inexperienced. The varieties, forms, and states of *hysterical* affection are so numerous, that the difficulty of describing and arranging them is very great.... The milder and more regular forms of *hysteria* present various modifications, depending chiefly upon the number of the circumstances or symptoms characterising them.... From either of these situations in the abdomen, a ball, the 'globus hystericus,' seems to move, with a rumbling noise, and with various convolutions, to the stomach, and thence to the throat or pharynx, where it remains for some time, and gives rise to a feeling of impending suffocation.... When *hysteria* assumes a truly convulsive form, spasmodic actions follow upon the feeling of suffocation, occasioned by the globus *hystericus*, as it reaches the throat.... Although hypochondriasis and *hysteria* are distinct diseases, yet they frequently approximate each other, or are even associated in females: indeed, most *hysterical* females may be said to be hypochondriacal, especially if *hysteria* has become habitual or confirmed. Dr. Cullen remarks, that the two diseases have some symptoms in common; but they are for the most part considerably different. Spasmodic disorder is rare in the one, but frequent unto a great degree in the other. Persons liable to *hysteria* are sometimes affected at the same time with dyspepsia: they are often, however, entirely free from it; but this never happens to those subject to hypochondriasis. These complaints occur mostly in different temperaments, ages, and sexes; a circumstance requiring no illustration.—*Copland, Dictionary of Practical Medicine.*

Hystéric. *adj.* Connected with, related to, constituted by, hysteria, or hysterics.

In *hysterick* women the rarity of symptoms doth oft strike an astonishment into spectators.—*Harvey, Discourse of Consumptions.*

Parent of vapours, and of female wit,
Who gave th' *hysterick* or poetick fit. *Pope.*

This terrible scene made too violent an impression upon a woman in her condition, and threw her into a strong *hysterick* fit.—*Arbuthnot and Pope.*

Assa fœtida sets out a perfume from Surat, and arrives a stink at London: in one place it is eat for sauce, and in the other cures *hysteric* fits.—*Tatler*, no. 310. (Rich.)

Hystéric. *s.* Fit of hysteria.

The under butler appeared, and Lord Chester began—'My head groom—Sir John Tyrrell is murdered—violent sprain in off leg—send lights with Mr. Pelham—poor gentleman—an express instantly to Dr. Physicon—Mr. Pelham will tell you all—Brown Bob—his throat cut from ear to ear—what shall be done?' and with this coherent and explanatory harangue, the marquis sank down in his chair in a sort of *hysteric*.—*Sir E. B. Lytton, Pelham*, ch. lxv.

Hystérical. *adj.* Same as Hysteric.

Many *hysterical* women are sensible of wind passing from the womb.—*Floyer, On the Humours.*

Hystérics. *s.* Hysterical fits.

It is also a consequence of that contrariety of passions to which it is subject, occasioned by the most dangerous and obstinate maladies; *hysterics*, epilepsies.—*Cogan, On the Passions*, pt. ii. ch. iii. (Rich.)

Hýsteron-próteron. *s.* [Gr. = last-first.] In *Rhetoric.* Cart before the horse.

How wild
A *hysteron-proteron*'s this, which Nature crosses,
And far above the top the bottom tosses.
Beaumont, Psyche, c. 1. s. 85. (Rich.)

Hysterótomy. *s.* [Gr. *τομή* = section, cutting.] In *Obstetrics.* Operation of cutting an unborn infant out of the womb; Cesarian operation.

This operation [the Cæsarian operation] is indeed the 'dernier ressort' of midwifery. Preferable as it is to the certain death of both parties, it is far more serious in its consequences than any other operation. It comes under the class of operations ... in which the life of the mother and child are necessarily more or less compromised. It is of very ancient date, being known to the Greeks, ... but, I believe, by them only employed after the death of the mother. From the circumstances of several remarkable personages having entered the world in this way, it was deemed fortunate to be so born.... Among the ancients, persons thus born were considered sacred to Apollo, to which Virgil alludes in the lines:

'Inde Lycam ferit, exsectum jam matre peremta,
Et tibi, Phœbe, sacrum.' (Æneid, x. 315.)

Thus Æsculapius was called the son of Apollo, because it is said he was brought into the world by *hysterotomy*.—*Dr. Churchill, Theory and Practice of Midwifery*, ch. xiv.

Hythe. *s.* [A.S.] Landing-place. In the present English, however, it is a *proper* rather than a *common* term, being chiefly found as the name, or part of the name, of a geographical locality, e.g. *Hythe*, Rother-*hithe*, Green-*hithe*, Lamb-*eth*. The spelling with *y*, rather than *i*, is Anglo-Saxon. Hurst, also, is sometimes spelt, *hyrst*. It is convenient, however, to limit the use of the letter *y*, when not final, as much as possible to words of Greek origin, so that it may mainly represent *ὑ* (*Upsilon, Ypsilon*). Hyson is the only other word which begins with *hy-* in the present edition, in which this is not the case.

I.

I

I. *s.* Name of the ninth letter in the English alphabet.

I. *pr.* [A.S. *ic.*]

1. Word by which the speaker denotes himself when speaking of himself as the subject of a proposition, and as a single individual.

The statement concerning *I* in the older and in many of the newer grammars, is that it is the nominative case of *me*; *me* being some oblique case of *I*. This doctrine is noticed only to be condemned. *I* and *me* are different words; connected, indeed, by their import, but no more *etymologically* related to one another than *good* and *better*, *husband* and *wife*, along with many others.

It is nearer the truth to say that *I* is one out of two personal pronouns denoting one speaker; or (changing the expression) one out of two pronouns of the first person: *m-* (*me*, *my*) being the other, and both being defective in their declension; *I* existing only as a nominative, and *m-* only as an oblique, case.

It is probable, however, that even this is scarcely the exact truth. It is probable that *I* is less, and that *m-* (*me*) is more, of a nominative than the English grammars, as they stand at present, admit. Thus—

Question. Who is this?—*Answer. Me.*

It is clear that if this be generally condemned (as it is) as bad English, *me* must be ignored as a nominative case—not so, however, if it can be defended: and of defence it certainly is capable.

Word for word, *I* is not only the German and Norse *ich*, *jeg*, *jag*, &c., but the Latin and Greek *ego* and ἐγώ, as well as the Slavonic, Lithuanic, and Sanskrit *asz*, and *ah-am*. Being this, it is also the Italian *io*, the Spanish *yo*, and the French *je*, derivatives of the Latin *ego*. Hence, it runs through the whole of the German, Slavonic, Lithuanic, Sanskrit, Latin, and Greek languages: in all of which it is only found in the nominative case; and in all of which the oblique cases are some form of *me*—*mec*, *meh*, *mihi*, ἐμοί, *moi*, &c. The generality of this rule should command our attention; inasmuch as the use of two wholly different words in the expression of the relation under notice is not so common a phenomenon as the study of the German languages and their congeners alone would lead us to expect. In fact, it is only in the philological class to which these tongues belong that such a word as *I* is to be found.

As a general rule, the pronoun of the first person is single. As a general rule, the single word by which it is represented coincides with *me* rather than *I*. Thirdly, in a surprising number of languages it is ac-

tually, if not the word *me* itself, some modification of the root that occurs. Thus in a language so comparatively distant from our own as the Fin, we find words so like *me*, as *minä* = *I*, *minun* = *my*, and *me* = we; whilst in a language so comparatively near as the Gaelic, though we find (as is expected) the root *m-*, we find it to the exclusion of either *I* or any equivalent term—e.g. *me* = *I*, and *me*, *mo* = *mine*, *da-mh* = *to me*.

Considering, then, not only the exceptional character of the term *I*, but the fact of the languages to which it belongs being the most advanced, or developed, in the world, it seems likely that the word is a new one, and that, as language proceeded, the notion of a pronoun of the first person (i.e. a name for the speaker, whoever it might be) instead of remaining simple and uncompounded, became divided by a separation of the speaker as the originator of an action or the agent to a verb (the *terminus a quo*), and the same person as an object towards which an action tended (the *terminus ad quem*), or as an object connected with some other (e.g. in the way of ownership, as '*My* hat'). To the expression of the first of these notions *I*, to the second *m-* was dedicated.

Nevertheless, if we suppose this to have been the case, it by no means follows that *I* should always be a nominative case, and that *me* should never be one. The latter word might retain some part of its old power, and the former might be used only as the *subject* of a proposition.

Now this is certain, that if 'It is *me*' be doubtful English, 'C'est *je*' is undoubtedly bad French; and if 'It is *I*' be the only correct form in English, 'C'est *moi*' is the only tolerable one in French. It is submitted then, as a point of general grammar, that it is more likely 'It is *me*' is right than that 'C'est *moi*' is wrong.

If we go further back, we find the same avoidance of *I* (ἐγώ, *ego*) in the predicate. Word for word translations of 'It is *I*,' which in Greek and Latin would be ἐστιν ἐγω and *est ego*, are non-existent; yet, in Latin, the combination of the copular verb with an oblique case of the first personal pronoun is common (*est mihi* = there is to me = I have); and that in a sense which was by no means without an adequate representation. In Greek the well-known words of our Saviour, when walking on the water to St. Peter, are ἐγώ εἰμι.

Be of good cheer, it is *I*; be not afraid.—*Matthew*, xiv. 27.

The mention of the nominative and accusative of the personal pronoun seems not inaptly to introduce a discussion of the well-known and much-controverted phrase 'It is *me*.' Now this is an expression which every one uses. Grammarians (of the smaller order) protest; schoolmasters (of the lower kind) prohibit and chastise; but English men, women, and children go on saying it, and will go on saying it as long as the English language is spoken. Here is a phenomenon worth accounting for. 'Not at all so,' say our censors; 'don't trouble yourself about it; it is a mere vulgarism. Leave it off yourself, and try to persuade every one else to leave it off.' But, my good censors, I cannot.—*Dr. Alford, A Plea for the Queen's English*, § 192.

Hence, it is probable that not only is *me* when used as a predicate justifiable, but that *I*, so placed, is of doubtful propriety. For further remarks see Me.

2. In *Metaphysics*. A translation into English of the German *Ich*. See Ego.

To a Transcendentalist Matter has an existence, but only as a Phenomenon; were We not there, neither would It be there; it is a mere Relation, or rather the result of a Relation between our living souls and the First Great Cause. . . . The tree is green and hard, not of its own natural virtue, but simply because my eye and hands are fashioned so as to discern such and such appearances under such and such conditions. . . . There is in fact, says Fichte, no tree there; but only a Manifestation of Power from something that is *not I*. The same is true of material Nature at large, of the whole visible Universe, with all its movements, figures, accidents, and qualities: all are impressions produced on Me by something Different from Me. This, we may suppose, may be the foundation of what Fichte means by his far-famed *Ich* and *Nicht-Ich* (*I* and *not-I*); words, which taking lodging (to use the Hudibrastic phrase) in certain 'heads that were to be let unfurnished,' occasioned a hollow echo, as of Laughter, from the empty Apartments; though the words are, in themselves, quite harmless, and may represent the basis of metaphysical Philosophy as fitly as any other words.—*Carlyle, Critical and Miscellaneous Essays, Novalis.*

I. The affirmative particle Aye, wrongly spelt.

Hath Romeo slain himself? Say thou but *I*,
And that bare vowel, I, shall poison more
Than the death-darting eye of cockatrice.
Shakespear, Romeo and Juliet, iii. 2.

Did your letters pierce the queen?—
I, sir; she took 'em and read 'em in my presence,
And now and then an ample tear trill'd down.
Id., King Lear, iv. 3.

I, now the spheres are in their tunes again.
B. Jonson, Masques at Court.

Nothing but No and *I*, and *I* and No,
How falls it out so strangely, you reply?
I tell you, fair, I'll not be answered so,
With this affirming No, denying *I*.
I say, I love; you slightly answer *I*:
I say, you love; you peule me out a No:
I say, I die; you echo me with *I*:
Save me, I cry; you sigh me out a No.
Must woe and I have naught but No and *I*?
No I am I if I no more can have;
Answer no more, with silence make reply,
And let me take myself what I do crave;
Let No and *I*, with I and you be so;
Then answer No and *I*, and *I* and No.
Drayton. (Nares by H. & W.)

If then your *I* agreement wants,
I to your *I* must answer No;
Therefore leave off your spelling plea,
And let my *I* be *I* 'per se.'
Wit's Interpreter, p. 116. (Nares by H. & W.)

Iámbic. *adj.* Connected with, constituted by, the Iambus. The metrical system to which this term *properly* applies is that of the Greek and Latin, wherein the iambus consists of a long syllable preceded by a short one; its notation being ⏑ –. Thus far, then, the word is not only more Greek or Latin than English, but the thing which it denotes is Greek or Latin also. Nevertheless, it occurs in our own Prosody. Here, however, the foot or measure is determined by accent rather than quantity, and the *English* iambic is, not a *long* syllable preceded by a *short* one, but an *accented* syllable preceded by one *without an accent*. *Deos*, *bibunt*, λεγω, νοσους, are Latin and Greek iambics, their *quantitative* notation being ⏑ –, and their *accentual* (*a* denoting the accent, *x* the want of it) notation *xa*. The English iambics are words like *remórse*, *awáy*, &c., in which the accentual notation *xa* is the exact reverse of that of the classical languages. Hence, the parallelism between the quantitative iambics of the ancients and the accentual iambics of the moderns, which the name in the first instance has a tendency to suggest, is non-existent; or rather, the so-called modern iambics are to be opposed rather than compared to the ancient ones. The same applies to the English trochees, anapæsts, and dactyles. See also Iambus.

Aristotle observes, that the *iambick* verse in the Greek tongue was the most proper for tragedy; because, at the same time that it lifted up the discourse from prose, it was that which approached nearer to it than any other kind of verse.—*Addison, Spectator*, no. 39.

Versification is the arrangement of a certain number of syllables according to certain laws. The feet of our verses are either *iambick*, as 'Alóft,' 'Creáte'; or *trochaick*, as 'Hóly,' 'Lófty.' Our *iambick* measure comprises verses of four syllables,

'Most good, most fair,
Or things as rare.'

—*Johnson, Grammar of the English Language.*

Iámbic. *s.* Iambic foot, or metre.

In thy felonious heart though venom lies,
It does but touch thy Irish pen, and dies;
Thy genius calls thee not to purchase fame
In keen *iambicks*, but mild anagram.
Dryden, Macflecnoe, 201.

The well-known lines of Adrian to Florus, and his reply,

'Ego nolo Florus esse,' &c.

are accentual trochaics, but not wholly so; for the last line,

'Scythicas pati pruinas,'

requires the word *pati* to be sounded as an *iambic*. . . . The break in the middle of the Alexandrine has nothing analogous to it in the trimeter *iambic*, but exactly corresponds to the invariable law of the pentameter. . . . We find two species of Latin verse; one metrical, which Prudentius, Fortunatus, and others aspired to write; the other rhythmical, somewhat licentious in the number of syllables, and wholly accentual in its pronunciation. . . . The *trochaic* or line in which the stress falls on the uneven syllables, commonly alternating by eight and seven, a very popular metre from its spirited flow, was adopted in military songs. . . . It was also common in religious chants. The line of eight syllables, or dimeter *iambic*, in which the cadence falls on the even places, was still more frequent in ecclesiastical verse. . . . The Alexandrine of twelve syllables seems to be the trimeter *iambic* of the ancients.—*Hallam, Introduction to the Literature of Europe during the fifteenth, sixteenth, and seventeenth Centuries*, pt. i. ch. i. § 35, and notes.

Iámbus. *s.* [Gr. *ἰαμβος*.] In (Greek and Latin) *Prosody*. Dissyllabic foot so called, in which the first syllable is short, the second long. Metre constituted or characterised by such feet. From its early use (see extract) in satirical compositions, it often carries with it the notion of abuse or invective. Iambic (though *adjectival* in origin) is the *commoner* term. For its application in English see Iambic, *adj.*

The invention of the *iambus*, the rival of the elegy in antiquity and early popularity, was familiarly ascribed by the ancients, as was that of many other metrical forms, to Archilochus. . . . In the Margites, however, assigned . . to Homer *iambic* verses were interspersed with heroic hexameters. . . . The measure suggested itself instinctively, to primitive genius, in any attempt to impart to the poetical treatment of a subject, not so much dignity or solemnity, as emphatic pungency . . . smartness. This view, together with the remote mythical antiquity of the *iambic* measure, is supported in the tradition of the Homeric hymn to Ceres by what is probably the earliest extant vestige of the name, the title of the Eleusinian nymph *Iambe*, who contributes by her jibes and drolleries to dissipate the grief of the goddess for her lost daughter.—*Mure, Critical History of the Language and Literature of ancient Greece*, b. ii. ch. i. § 7.

Iátromathemátical. *adj.* Constituted, or adopted, by an iatromathematician.

(For example see next entry.)

Iátromáthematícian. *s.* [Gr. *ἰατρός* = physician.] Physician who relies chiefly on a mathematical physiology: generally as opposed to one (*iatro-chemist* or *chemiatric*) whose doctrines were chemical rather than mechanical.

A second school of medicine, which supersedes this, is called the *iatro-mathematical*. This seems to have arisen in Italy. Borelli's application of mechanical principles to the muscles has been mentioned above. These physicians sought to explain everything by statical and hydraulic laws; they were therefore led to study anatomy, since it was only by an accurate knowledge of all the parts that they could apply their mathematics. John Bernouilli even taught them to employ the differential calculus in explaining the bodily functions. But this school seems to have had the same leading defect as the chemiatric; it forgot the peculiarity of the laws of organisation and life, which often renders those of inert matter inapplicable. Pitcairn and Boerhaave were leaders of the *iatro-mathematicians*; and Mead was reckoned the last of its distinguished patrons.—*Hallam, Introduction to the Literature of Europe during the fifteenth, sixteenth, and seventeenth Centuries*, pt. iv. ch. viii. § 3.

It is not necessary for us to dwell longer on this subject, or to point out the total insufficiency of the mere mechanical physiology. The iatrochemists had neglected the effect of the solids of the living frame; the *iatromathematicians* attended only to these. And even these were considered only as canals, as cords, as levers, as lifeless machines. These reasoners never looked for any powers of a higher order than the cohesion, the resistance, the gravity, the attraction, which operate in inert matter. If the chemical school assimilated the physician to a vintner or brewer, the mechanical physiologists made him an hydraulic engineer; and, in

act, several of the *iatromathematicians* were at the same time teachers of engineering and of medicine. —*Whewell, History of Scientific Ideas*, ii. 186.

Ibex. *s.* [Lat.] Antelope so called.

The goats are not numerous in species; in Europe the *ibex* is the most celebrated.... The species seems to be confined to the highest mountains in Europe, the Alps, particularly the Rhœtian, and the Pyrenees with their loftiest branches.... In Savoy and Switzerland they are now rarer than in the Tyrol ... The Abyssinian *ibex* (Capra jaela) ... is numerous in the mountains of Abyssinia and Upper Egypt.... The Caucasian *ibex* (Capra Caucasica) is equal if not superior in strength and agility to the Alpine.... The Œgagrus (Capra Ægagrus) is distinguished from the former by the horns forming an acute angle to the front, with the ribs less broad, assuming an undulating edge, and the posterior part rounded.... In size and proportion it is nearly the same as the *ibex*. — *Translation of Cuvier's Règne Animal.*

The horns are large, ... robust, annulated, and bent back, as in the *ibex*, standing rather near the orbits, and rising vertically from the forehead; with the annuli most prominent towards the front, and reaching upwards to about two-thirds of their whole length.—*Swainson, Natural History and Classification of Quadrupeds*, § 261.

Ibis. *s.* [Lat.] Bird so called; Egyptian stork. See extracts.

A certain bird called *ibis*, about the banks of the Nile, first taught the Egyptians the way of administering clysters; for this bird has often been observed, by means of his crooked bill intromitted into the anus, to inject salt-water, as with a syringe, into its own bowels, and thereby to exonerate its paunch when too much obstructed.—*Greenhill, Art of Embalming*, p. 232.

Besides these gods, the Egyptians worshipped a great number of beasts; as the ox, the dog, the wolf, the hawk, the crocodile, the *ibis*, the cat.... Among us, says Cicero, it is very common to see temples robbed, and statues carried off; but it was never known, that any person in Egypt ever abused a crocodile, an *ibis*, or cat; for its inhabitants would have suffered the most extreme torments, rather than be guilty of such sacrilege. It was death for any person to kill one of these animals voluntarily; and even a punishment was decreed against him who should have killed an *ibis*, or cat, with or without design.—*Translation of Rollin's Ancient History*, vol. i. b. i. pt. ii. ch. ii. § 1.

The appearance of the glossy *ibis* (*ibis* falcinellus) in this country, though not uncommon, is still accidental.—*Yarrell, British Birds.*

With the Latin *plural*.

Australasia is the only part of the world in which the *ibides* are not found.... It is only since the publication of Bruce's Travels that positive notions have been gained respecting the genus to which we should refer the bird which was so venerated by the Ancient Egyptians. ... Bruce found in Lower Ethiopia a bird was there named Abou hannès (Father John), and, on comparing it with the embalmed individuals and with the ancient descriptions, he recognized it to be the true black and white *ibis*,... the same as the Mengel or Aboumengel (Father of the Sickle) of the Arabs.... Another *ibis*, entirely black, was equally reverenced by the Egyptians and embalmed in a similar manner.—*Translation of Cuvier's Règne Animal.*

Ice. *s.* [A.S. *is*. In all the allied languages the spelling is with *-s*. In English, however, *ise* would run the risk of being sounded *ize*. The present orthography (if so it may be called) here, as in *pence, whence*, and many other words, does much to disguise the etymology.]

1. Water or any other liquid made solid by cold.

This sensible warm motion to become
A kneaded clod, and the delighted spirit
To bathe in fiery floods, or to reside
In thrilling regions of thick-ribbed *ice*.
Shakespear, Measure for Measure, iii. 1.

The *ice* was here, the *ice* was there,
The *ice* was all around;
It screamed, and growled, and cracked and howled,
Like noises in a swound.
Coleridge, Ancient Mariner.

Used *metaphorically*.

Thou art all *ice*, thy kindness freezes.
Shakespear, Richard III. iv. 2.

2. Viand so called, consisting, generally, of water or cream partially frozen and flavoured with fruits.

Break the ice. Make the first opening to any attempt.

If you *break the ice*, and do this feat,
Achieve the elder, set the younger free
For our access, whose hap shall be to have her
Will not so graceless be to be ingrate.
Shakespear, Taming of the Shrew, i. 2.

After he'd a while look'd wise,
At last *broke* silence and the *ice*. *Butler, Hudibras.*

I saw the identical object of my search—Daly himself. We were on opposite sides of the way. I saw him, and saw that he saw me. The moment was trying and critical;—would he *break the ice*—should I? Our eyes met, and the doubt seemed to be mutual—the inclination much the same. It is quite impossible to describe the sort of feeling by which we were both actuated. I saw he wished to cross over and speak; I wished (and thought he saw I did) to cross over and speak to him. I cannot explain the affair of the minute which followed, but, at the end of it, we had shaken hands, and were walking together.—*Theodore Hook, Gilbert Gurney*, vol. iii. ch. i.

Ice. *v. a.*

1. Cover with ice; turn to ice; cool by means of ice.

'Tis chrystal, friend, *ic'd* in the frozen sea.
P. Fletcher, Piscatory Eclogues, v. 11.

2. In *Cookery* or *Confectionary*. Glaze with a coat (often of sugar) which resembles ice.

(For example see Icing.)

Used *figuratively*.

Noise and passion, and hardy confidence, *iced* over with some sanctimonious pretences, can engage the affections of the vulgar more than ingenuity and real moderation.—*Puller, Moderation of the Church of England*, preface: 1679.

Iceberg. *s.* [*berg* = hill, from Dutch or German direct.] Floating island of ice; drifted glacier.

One way in which the unnatural is often made to appear, for a time, natural, is, by giving a lively and striking description which is correct in its several parts, and unnatural only when these are combined into a whole; like a painter who should give an exact picture of an English country-house, of a grove of palm-trees, an elephant and an *iceberg*, all in the same landscape.—*Archbishop Whately, Elements of Rhetoric*, ch. ii. § 2.

The great glaciers generated in the valleys of Spitzbergen ... are almost all cut off at the beach. ... In Baffin's Bay, on the contrary, ... where there is no warmer under-current, the glaciers stretch out from the shore, and furnish repeated crops of mountainous masses of ice which float off into the ocean. The number and dimensions of these bergs is prodigious; ... other bergs have been occasionally met with ... as far south as lat. 4° and longitude 60° west.... The distance to which *ice bergs* float ... is ... very different.—*Sir C. Lyell, Principles of Geology*, b. i. ch. vii.

The *ice-berg* is the creation of many ages; originally a prodigious glacier reposing in the valley of some polar mountain, it has been loosened from its hold and tumbled in the ocean. Dreaded by the navigator, it floats a fantastic and majestic island.—*D. P. Thompson, Introduction to Meteorology*, § 236.

Icefield. *s.* Expanse of water either wholly frozen or blocked up with floating masses of ice.

Here they were becalmed in a large bay, with three apparent openings between the islands which formed it; but every where, as far as they could see, surrounded with ice. There was not a breath of air, the water was perfectly smooth, the ice covered with snow, low and even, except a few broken pieces near the edge; and the pools of water in the middle of the *ice-fields* just crusted over with young ice. On the next day the ice closed upon them, and no opening was to be seen any where, except a hole or lake, as it might be called, of about a mile and a half in circumference, where the ships lay fast with their ice anchors. They filled their casks from these *ice-fields*, which was very pure and soft.—*Southey, Life of Nelson*, ch. i.

Icehouse. *s.* House in which ice is stored, and kept solid.

Considering at how little expense an *icehouse* can be constructed, it is surprising that any respectable habitation in the country should not have one attached to it. The simplest and most scientific form is a double cone, that is two cones joined base to base; the one being of stone or brickwork, sunk under the ground, with its apex at the bottom, into which the ice is rammed; the other being a conical roof of carpentry covered with thatch and pointed at top. The entrance should be placed always on the north side. It should consist of a corridor or porch with double doors, and be screened from the sunbeams by a small shrubbery.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Icepail. *s.* Pail containing ice for cooling wine.

'This is as it should be,' said I, looking round at the well-filled table, and the sparkling spirits immersed in the *ice-pails*; 'a genuine friendly dinner.' —*Sir E. B. Lytton, Pelham*, ch. lxvii.

Ichneúmon. *s.* [Gr.]

1. Quadruped so called, of the genus Herpestes.

The crocodile ... is awed by none more than the *ichneumon*.—*Sir T. Herbert, Travels*, p. 364.

The *ichneumon* makes it the whole business of his life to break the eggs of the crocodile.—*Addison, Spectator*, no. 126.

We proceed to the third subdivision of the Viverra, which includes the Mangoustes, the first of which is the celebrated *Ichneumon*. ... Brisson, Linnæus, Buffon, and all naturalists before Schreber, admitted but a single species of the Mangouste or *Ichneumon*, though Edwards had expressed a doubt concerning the identity of his Indian *Ichneumon* with that of Egypt.—*Translation of Cuvier's Règne Animal.*

2. Insect so called of the genus Ichneumon: (often used *adjectivally* with *fly*).

The generation of the *ichneumon fly* is in the bodies of caterpillars, and other nymphæ of insects. —*Derham, Physico-Theology.*

If we have reason to complain of the number of caterpillars, and of their fatal ravages in the vegetable kingdom, we ought to congratulate ourselves on the existence of the *ichneumons*, which are their natural enemies. We know that the ancient naturalists designated under this denomination a little quadruped inhabiting the banks of the Nile, and which received divine honours from the Egyptians in consequence of the opinion that it destroyed the eggs of the crocodile, and even entered the mouth of that reptile, and, proceeding into its body, gnawed its entrails.... Thus the name of *ichneumon* has been well applied to the insects of which we are treating. ... The *ichneumons* of the entomologists both destroy the eggs ... and the caterpillars themselves, and the crysalids which contain them.— *Translation of Cuvier's Règne Animal.*

Ichnográphical. *adj.* Representing a certain plot of ground.

Perrault has assisted the text with a figure or *ichnographical* plot.—*Evelyn*, ii. i. 1.

Here you have the *ichnographical* plan of the temple of Janus.—*Drummond, Travels*, p. 116.

Ichnógraphy. *s.* [Gr. ἴχνος + γράφω.] Ground plot.

It will be more intelligible to have a draught of each front in a paper by itself, and also to have a draught of the ground-plot or *ichnography* of every story in a paper by itself.—*Moxon.*

Ichnólogy. *s.* [Gr. λόγος = word, doctrine, principle.] In *Geology*. Principles, and details, connected with the investigation of the footsteps, or tracks, of certain animals left as impressions on certain strata.

Our knowledge of the footsteps of recent animals, what may be called modern *ichnology*, is so limited that we cannot ... with any degree of certainty mark even the class of beings by which they have been made.—*Sir W. Jardine, Ichnology of Annandale*, p. 7: 1851.

Ichor. *s.* [Gr. ἰχώρ.] Thin watery humour like serum. See next entry.

Milk, drawn from some animals that feed only upon flesh, will be more apt to turn rancid and putrefy, acquiring first a saline taste, which is a sign of putrefaction, and then it will turn into an *ichor*. —*Arbuthnot, On the Nature and Choice of Aliments.*

Of course his perspiration was but *ichor*,
Or some such other spiritual liquor.
Byron, Vision of Judgement, s. 25.

Ichorous. *adj.* Serous; sanious; thin; undigested. In *Medicine*, *ichor* means nearly the same as sanies, i.e. a *thin* unhealthy discharge, as opposed to the *laudable* pus of healthy inflammatory action; in other words, the term is one of disparagement. In general language, it is rather laudatory than otherwise, denoting something *thinner* than blood, but thinner because subtler and more spiritual. The blood of the gods was *ichor*, and the first instance of the word is where it is applied by Homer to the blood of Venus when wounded by Diomed.

The lung-growth is imputed to a superficial sanious or *ichorous* exulceration. — *Harvey, Discourse of Consumptions.*

The pus from an ulcer of the liver, growing thin and *ichorous*, corrodes the vessels.—*Arbuthnot, On Diet.*

Ichthyic. *adj.* [Gr. ἰχθύς = fish.] In *Zoology*. Having the character of a fish.

You may perhaps think that I have been biassed by the extrinsic interest of personal discovery, in dwelling so long upon the cranial structure of the lepidosiren; but I persuade myself that the actual value and intrinsic importance of this remarkable type of *ichthyic* organisation, will justify the time and attention we have been bestowing upon it. The

skeleton of the lepidosiren affords the right key to the complexities of those of the typical and better ossified fishes. I believe it to manifest, upon the whole, the highest grade which is attained in the class of fishes, in the direct progress to perfection, or, in what may be termed the vertebrate high road. —*Owen, Lectures on Comparative Anatomy*, lect. iv.

In the lepidosiren the notochord, the parapophyses, the attachment of the scapulæ to the occiput, the branchiostegal covering of the permanent gills, the opercular bones, the presence of a spiral intestinal valve, the relative position of the anus, the extra-oral nasal sacs, the scaly integuments, the mucous tubes on the head, the 'lateral line,' in short, the totality of the organisation of the lepidosiren, exemplify its fundamental *ichthyic* nature.—*Ibid., Anatomy of Vertebrates.*

Ichthyológical. *adj.* Relating to, connected with, Ichthyology.

The Royal Society not only receives all this nonsensical *ichthyological* farrago, but selects it for publication.—*Mathias, Pursuits of Literature.*

Ichthyólogist. *s.* Investigator of ichthyology.

Cuvier observes that [in] the History of Fishes [by Willoughby and Ray] . . . many species are described which will not be found in earlier *ichthyologists*, and that those of the Mediterranean especially are given with great precision. — *Hallam, Introduction to the Literature of Europe during the fifteenth, sixteenth, and seventeenth Centuries*, pt. iv. ch. viii. § 15.

Ichthyólogy. *s.* [Gr. λόγος = word, discourse, principle.] Investigation of the natural history and classification of fishes.

Some there are, as camels and sheep, which carry no name in *ichthyology*.—*Sir T. Browne, Vulgar Errours.*

Of the value of this principle of harmony, some idea may be formed from the circumstance, that on it Agassiz has based the whole of that celebrated classification, of which he is the sole author, and by which fossil *ichthyology* has for the first time assumed a precise and definite shape.—*Buckle, History of Civilization in England*, vol. i. ch. xiv.

Ichthyosaúrus. *s.* [Gr. σαῦρα = lizard.] Extinct reptile, combining the characters of a fish with those of a lizard; Hylæosaurus, Plesiosaurus (= approximate lizard), and other similar compounds, are common in *Geology*.

Waters in which the *icthyosaurus* dived.—*Mantell, Wonders of Geology.*

Ichthyósis. *s.* [Gr.] In *Medicine*. Skin disease so called from the thickened cuticle resembling a fish's skin; fish-skin disease.

Ichthyosis consists of a morbid enlargement and elongation of the papillæ, and a thickening of the epidermis. Horny peduncles are thus formed, which spread so as to acquire broad irregular tops, and, undergoing partial exfoliation, sometimes resemble the scales of a fish. This affection is general or local, and hereditary or accidental. When it is hereditary, it either is congenital, or it does not appear until some months after birth. The local form is most frequently accidental, the more general affection is commonly congenital or hereditary.—*Copland, Dictionary of Practical Medicine.*

Ichthyótomist. *s.* [Gr. root of τέμνω = cut; τομή = section.] One engaged in the dissection of fish.

The first spinal nerve [in fishes] rises usually by two roots, the dorsal one having a ganglion, rarely by non-ganglionic roots exclusively from the prepyramidal tracts: it usually emerges between the ex-occipital and the atlas, and divides into a small dorsal and a larger ventral branch: this communicates with the ventral branch of the next spinal nerve, and supplies the pectoral fin-muscles, the subcoradoideus, and the sterno-hyoideus; it is called hypoglossal nerve by some *ichthyotomists*.—*Owen, Lectures on Comparative Anatomy*, lect. viii.

Ícicle. *s.* [*ice-ickle.*] Shoot of ice commonly hanging down from the upper part.

If distilled vinegar or aqua-fortis be poured into the powder of loadstone, the subsiding powder, dried, retains some magnetical virtue; but if the menstruum be evaporated to a consistence, and afterwards doth shoot into *icicles*, or crystals, the loadstone hath no power upon them.—*Sir T. Browne, Vulgar Errours.*

From locks uncomb'd and from the frozen beard,
Long *icicles* depend, and crackling sounds are heard.
Dryden.

Icing. *verbal abs.* Covering with ice; giving the character of ice to anything: (special application in *Cookery*).

The splendid *iceing* of an immense historick plum-cake was embossed with a delicious basso-relievo of the destruction of Troy.—*T. Warton, History of English Poetry*, iii. 492.

To glaze or *ice* pastry. . . . The best mode of *icing* fruit-tarts . . . is to moisten the paste with cold water, to sift sugar thickly upon it. . . . When a whiter *icing* is preferred the pastry must be drawn from the oven when nearly baked and brushed with white of egg, . . . then well covered with sifted sugar. —*Eliza Acton, Modern Cookery*, ch. xvi.

Íckle. *s.* [A.S. *gicel.*] Probably, so closely connected with *ice* as to have the same meaning, whether simple or compound. It occurs as *jakle* in the North Frisian, and in the Icelandic as *jokul* = glacier, or snow-capped mountain ? *Hecla.*

Be she constant, be she fickle,
Be she fire, or be she *ickle*,
Still unhappy is his life
That is wedded to a wife.
Cotton, Joys of Marriage: 1689.

Ícon. *s.* [Gr. εἰκών.] Image, picture, or representation.

Boysardus, in his tract of divination, hath set forth the *icons* of these ten, yet added two others.—*Sir T. Browne, Vulgar Errours.*

Some of our own nation, and many Netherlanders, whose names and *icons* are published, have deserved good commendation.—*Hakewill, Apology.*

Icónoclasm. *s.* Image-breaking.

The simplicity of the Alpine peasants was naturally averse to the wealth of the monastic establishments which began to arise among them; there might survive some vague tradition of the *iconoclasm* and holiness of Claudius of Turin, or of the later residence of Arnold of Brescia in Zurich.—*Milman, History of Latin Christianity*, b. ix. ch. viii.

Icónoclast. *s.* [Gr. εἰκονοκλάστης; κλάω = break.] Imagebreaker.

Pope Stephen IV., in 768 condemned this council in a synod of Italian bishops, who asserted the honour of images against the eastern *iconoclasts*.—*Young, On Idolatrous Corruptions*, ii. 275.

Constantine, unlike his brethren, was an ardent *iconoclast*.—*Milman, History of Latin Christianity*, b. iv. ch. viii.

Iconoclástic. *adj.* Breaking or destroying images.

I have sometimes reflected for what reason the Turks should appoint such marks [niches in their mosques] to direct their faces towards, in prayer. And if I may be allowed to conjecture, I believe they did it at first in testimony of their *iconoclastick* principle; and to express to them both the reality of the Divine presence there, and at the same time also its invisibility.—*Maundrell, Travels*, p. 15.

Most of those [statues] at York were destroyed, in the first emotions of *iconoclastic* zeal.—*Swinburne, Travels through Spain*, letter 44.

Yet this question, thus prematurely agitated by the *iconoclastic* emperors, and at this period of Christianity so fatally mistimed, is one of the most grave, and it should seem inevitable controversies, arising out of our religion.—*Milman, History of Latin Christianity*, b. iv. ch vii.

Icosahédron. *s.* [Gr. εἴκοσι = twenty + ἕδρα = seat, table.] Figure having twenty sides.

But we must not forget that this disposition to what Bacon calls anticipation was full of danger as well as of hope. It led Plato into error, as it led Kepler afterwards, and many others in all ages of scientific activity. It led Plato into error, for instance, when it led him to assert (in the 'Timæus') that the four elements, earth, air, fire and water, have, for the forms of their particles respectively, the cube, the *icosahedron*, the pyramid, and the octahedron.—*Whewell, History of Scientific Ideas.*

Ictérical. *adj.* [Lat. *icterus* = jaundice, for which it is the medical term.] Connected with, constituted by, relating to the jaundice: (construction *substantival* in the extract).

In the jaundice the choler is wanting, and the *icterical* have a great sourness, and gripes, with windiness.—*Floyer.*

Icy. *adj.*

1. Covered with, made, consisting, having the nature of ice; cold; frosty.

Here feel we but the penalty of Adam,
The seasons difference; as the *icy* fang,
And churlish chiding of the winter's wind.
Shakespear, As you like it, ii. 1.

He relates the excessive coldness of the water they met with in summer in that *icy* region, where they were forced to winter.—*Boyle.*

Tempt *icy* seas, where scarce the waters roll,
Where clearer flames grow round the frozen pole.
Pope.

2. Applied to immaterial objects; generally to temperament or disposition; cold.

Thou would'st have never learn'd
The *icy* precepts of respect.
Shakespear, Timon of Athens, iv. 3.

If thou do'st find him tractable to us,
Encourage him, and tell him all our reasons;
If he be leaden, *icy*, cold, unwilling,
Be thou so too. *Shakespear, Richard III.* iii. 1.

Ide. *s.* Native freshwater fish so called, akin to the Roach: Leuciscus (Cyprinus) idus.

According to Mr. Stewart, this species was taken at the mouth of the Nith by the late Dr. Walker . . . Block says this fish is distinguished by the bulky character of the body, and the anal fin having thirteen rays. It was first described by Gesner, and is found in Pomerania, Westphalia, Sweden, Norway, Denmark, and Russia . . . Sir Thomas Maryon Wilson . . . caught a fine large specimen of the *ide*, whilst trolling for pike on a windy day in the Gota Elf . . . The fish weighed between four and five pounds.—*Yarrell, British Fishes.*

A careful analysis of the long olfactory nerve in the eel, the *ide*, or the roach, shows that it is a fasciculus of filaments distinct from their origin.—*Owen, Lectures on Comparative Anatomy*, lect. viii.

Idéa. *s.* [Gr. ἰδέα; for remarks on the pronunciation see the last extracts of the entry.] Mental image.

Our Saviour himself, being to set down the perfect *idea* of that which we are to pray and wish for on earth, did not teach to pray or wish for more than only that here it might be with us, as with them it is in heaven.—*Hooker, Ecclesiastical Polity.*

How good, how fair,
Answering his great *idea*.
Milton, Paradise Lost, vii. 556.

Whatsoever the mind perceives in itself, or is the immediate object of perception, thought, or understanding, that I call *idea*.—*Locke.*

But yet, after all this, there being men who persuade themselves that they have clear, positive, comprehensive *ideas* of infinity, it is fit they enjoy their privilege; and I should be very glad (with some others that I know, who acknowledge they have none such) to be better informed by their communication.—*Id.*

The form under which these things appear to the mind, or the result of our apprehension, is called an *idea*.—*Watts.*

I know of no *ideas* or notions that have a better claim to be accounted simple and original than those of space and time.—*Reid, Essays on the Powers of the Mind*, vol. i. p. 354.

The leading doctrine of Locke, as is well known, is the derivation of all our simple *ideas* from sensation and from reflection. The former present, comparatively, no great difficulty; but he is not very clear or consistent about the latter. He seems in general to limit the word to the various operations of our own minds in thinking, believing, willing, and so forth. This, as has been shown formerly, is taken from, or at least coincident with, the theory of Gassendi in his Syntagma Philosophicum. It is highly probable that Locke was acquainted with that work; if not immediately, yet through the account of the philosophy of Gassendi, published in English by Dr. Charleton, in 1663, which I have not seen, or through the excellent and copious abridgment of the Syntagma by Bernier. But he does not strictly confine his *ideas* of reflection to this class. Duration is certainly no mode of thinking; yet the *idea* of duration is reckoned by Locke among those with which we are furnished by reflection. The same may perhaps be said, though I do not know that he expresses himself with equal clearness as to his account of several other *ideas*, which cannot be deduced from external sensation, nor yet can be reckoned modifications or operations of the soul itself, such as number, power, existence. Most of the perplexity which has arisen on this subject . . . may be referred to the equivocal meaning of the word *idea*. The Cartesians understood by this whatever is the object of thought, including an *intellection* as well as an *imagination*. By an *intellection* they meant that which the mind conceives to exist, and to be the subject of knowledge, though it may be unimaginable and incomprehensible. . . . Arnauld, if he is the author of L'Art de Penser, mentions the *idea* of a chiliagon, or figure of 1000 sides, as an instance of the distinction between that which we imagine and that which we conceive or understand. Locke has employed the same instance to exemplify the difference between clear and obscure *ideas*. According to the former, we do not imagine a figure with 1000 sides at all; according to the latter, we form a confused image of it. We have an *idea* of such a figure, it is agreed by both; but in the sense of Arnauld, it is an *idea* of the understanding alone; in the sense of Locke, it is an *idea* of sensation, framed like other complex *ideas* by putting together those we have formerly received, though we may never have seen the precise figure.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. iv. ch. iii. §§ 107, 108, 109.

The metaphysical inquiry into the nature and composition of what have been called abstract *ideas*, or in other words, of the notions which answer in the mind to classes and to general names, belongs not to logic, but to a different science, and our purpose does not require that we should enter upon it here. We are only concerned with the universally

acknowledged fact, that such general notions or conceptions do exist. The mind can conceive a multitude of individual things as one assemblage or class; and general names do really suggest to us certain *ideas* or mental representations, otherwise we could not use the names with consciousness of a meaning. Whether the *idea* called up by a general name is composed of the various circumstances in which all the individuals denoted by the name agree, and of no others, (which is the doctrine of Locke, Brown, and the conceptualists); or whether it be the *idea* of some one of those individuals, clothed in its individualizing peculiarities, but with the accompanying knowledge that those peculiarities are not properties of the class, (which is the doctrine of Berkeley, Dugald Stewart, and the modern nominalists); or whether (as held by Mr. Mill) the *idea* of the class is that of a miscellaneous assemblage of individuals belonging to the class; or whether, finally, (what appears to be the truest opinion,) it be any one or any other of all these, according to the accidental circumstances of the case; certain it is, that some *idea* or mental conception is suggested by a general name, whenever we either hear it or employ it with consciousness of a meaning. And this, which we may call if we please a general *idea*, represents in our minds the whole class of things to which the name is applied.—*J. S. Mill, System of Logic*, iv. ch. ii. § 1.

The current pronunciation makes the word either an actual dissyllable, or an approach to it, by the dropping or slurring over the final *a*. Yet the Greek was ἰδέα. In the following the form is trisyllabic:—

Happy you that may to the saint, your only *idea*,
Although simply attir'd, your manly affection utter.
Sir P. Sidney.

I did infer your lineaments,
Being the right *idea* of your father,
Both in your form and nobleness of mind.
Shakespear, Richard III. iii. 7.

Her sweet *idea* wander'd through his thoughts.
Fairfax.

If Chaucer, by the best *idea* wrought,
The fairest nymph before his eyes he set. *Dryden.*

This pronunciation is still common in verse, and not extinct, when persons affect purity of speech, in prose.

Hail, Sympathy! thy soft *ideas* bring.
Canning, New Morality, in *Anti-Jacobin.*

Idéal. *adj.* Mental; intellectual; not perceived by the senses.

There is a two-fold knowledge of material things; one real, when the thing, and the real impression thereof on our senses, is perceived; the other *ideal*, when the image or idea of a thing, absent in itself, is represented to and considered on the imagination. —*Cheyne, Philosophical Principles.*

Idéal. *s.* Ideal type or standard: (with *the*, *this*, *that*, or some similarly defining word).

I've seen much finer women, ripe and real,
Than all your beauties of the stone *ideal*,
Byron, Don Juan.

The *ideal* of morality has no more dangerous rival than the *ideal* of highest strength, of most powerful life; which also has been named (very falsely as it was there meant) the *ideal* of poetic greatness. It is the maximum of the savage; and has, in these times, gained, precisely among the greatest weaklings, very many proselytes. By this *ideal*, man becomes a beast-spirit, a mixture; whose brutal wit has, for weaklings, a brutal power of attraction.—*Carlyle, Critical and Miscellaneous Essays, Novalis* (from whom it is a translation).

Idéalism. *s.* System of metaphysical philosophy founded upon the doctrine that the objects of the external world are what they are, less on the strength of any material properties of their own, than through the action of the mind, in which they exist as ideas.

Now, without entering into the intricacies of German philosophy, we need here only advert to the character of *idealism*, on which it is everywhere founded, and which universally pervades it. In all German systems since the time of Kant, it is the fundamental principle to deny the existence of matter; or rather, we should say, to believe it in a radically different sense from that in which the Scotch philosopher strives to demonstrate it, and the English unphilosopher believes it without demonstration. To any of our readers, who has dipped never so slightly into metaphysical reading, this *idealism* will be no inconceivable thing. . . . The *idealist*, again, boasts that his philosophy is transcendental, that is 'ascending beyond the senses,' which, he asserts, all philosophy, properly so called, is, and by its nature, must be.—*Carlyle, Critical and Historical Essays, Novalis.*

Idéalist. *s.* Supporter of the doctrine of idealism.

On innumerable other points, we find the same discrepancy between the two schools. The *idealist*, for example, asserts that our notions of cause, of time, of personal identity, and of substance, are universal and necessary; that they are simple; and that, not being susceptible of analysis, they must be referred to the original constitution of the mind. On the other hand, the sensationalist, so far from recognizing the simplicity of these ideas, considers them to be extremely complex, and looks upon their universality and necessity as merely the result of a frequent and intimate association. This is the first important difference which is inevitably consequent on the adoption of different methods. The *idealist* is compelled to assert, that necessary truths and contingent truths have a different origin. The sensationalist is bound to affirm that they have the same origin. The further these two great schools advance, the more marked does their divergence become. They are at open war in every department of morals, of philosophy, and of art. The *idealists* say that all men have essentially the same notion of the good, the true, and the beautiful. The sensationalists affirm that there is no such standard. . . . I speak of *idealists* in opposition to sensationalists; though the word *idealist* is often used by metaphysicians in a very different sense.—*Buckle, History of Civilization in England*, vol. i. ch. iii. and note.

Idéalize. *v. n.* Form ideas.

Others attributed it [religion] to meditation and wonder on the beauty and magnificence of nature, or the forebodings and expectations of futurity congenial to man, or their natural propensity to *idealize*.—*Maty, Account of Meiner's History of all Religions*: 1786.

Idéally. *adv.* As conceived as an idea.

A transmission is made materially from some parts, and *ideally* from every one.—*Sir T. Browne, Vulgar Errours.*

Idéate. *v. a.* Fancy; form in idea. *Rare.*

Letters mingle souls;
For thus friends absent speak: this ease controuls
The tediousness of my life: but for these
I could *ideate* nothing which could please.
Donne to Sir H. Wotton, Poems, p. 146.

What good statesmen would they be, who should *ideate* or fancy such a commonwealth?—*Knott.*

Idéist. *s.* Idealist: (this latter being, at present, the *commoner* word).

If that be so, I must necessarily conclude, that the notionists and the *ideists* have their apprehensive faculties very differently turned.—*Locke.* (Ord MS.)

Idéntic. *s.* Same.

The beard's the *identick* beard you knew,
The same numerically true. *Butler, Hudibras.*

Idéntical. *adj.* Commoner form of Identic.

Their majus is *identical* with magis.
Sir M. Hale, Origination of Mankind.

Those ridiculous *identical* propositions, that faith is faith, and rule is a rule, are first principles in this controversy of the rule of faith, without which nothing can be solidly concluded either about rule or faith.—*Archbishop Tillotson, Sermons.*

If this pre-existent eternity is not compatible with a successive duration, as we clearly and distinctly perceive that it is not, then it remains, that some being, though infinitely above our finite comprehensions, must have had an *identical*, invariable continuance from all eternity, which being is no other than God.—*Bentley, Sermons.*

Idéntically. *adv.* In an identical manner.

In artificial things the introduction of a new form makes not the matter to be *identically* different from what it was.—*Ross, On Sir K. Digby.*

Identificátion. *s.* Determination of identity.

He may then be able, for ought we know to the contrary, to join the soul or spirit of man to himself. —Not so as to make but one person of both; such an *identification* I take to be impossible.—You may take it to be so; but I am sure you cannot prove it. —*Skelton, Deism Revealed*, dialogue vi.

I am not ready to admit the *identification* of the Romish faith with Gospel faith.—*Bishop Watson, Charge.*

Idéntify. *v. a.*

1. Prove, determine, or fix.

All indictments must set forth the christian name, surname, and addition of the state and degree, mystery, town, or place, and the county of the offender: and all this to *identify* his person.—*Sir W. Blackstone, Commentaries on the Laws of England.*

2. Make the same: (as, 'His cause is *identified* with mine').

All the divine perfections, being intrinsical unto and *identified* with the divine nature or essence.—*Barrow, Works*, i. 391.

Let us *identify*, let us incorporate ourselves with the people.—*Burke, Speech on Economical Reform*, p. 264. (Ord MS.)

This result, however, which establishes the practical doctrine, that the State is to be neutral in questions involving religious truth and error, startles many persons, both practical statesmen and speculative reasoners. . . . The abstinence of the State from *identifying* itself with one of the rival churches, appears to them in the light of a sinful neglect of religious duty—or even a profession of religious unbelief.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. ix. § 9.

Idéntity. *s.* Sameness.

There is a fallacy of equivocation from a society in name, inferring an *identity* in nature: by this fallacy was he deceived that drank aqua-fortis for strong water.—*Sir T. Browne, Vulgar Errours.*

Certainly those actions first needs be regular, where there is an *identity* between the rule and the faculty.—*South, Sermons.*

Considering any thing as existing, at any determined time and place, we compare it with itself existing at another time, and thereon form the ideas of *identity* and diversity.—*Locke.*

By cutting off the sense at the end of every first line, which must always rhyme to the next following, is produced too frequent an *identity* in sound, and brings every couplet to the point of an epigram. —*Prior.*

Ideológical. *adj.* Connected with, relating to, constituted by the doctrine of ideas.

I would willingly have confined myself to those better understood expressions, and persevered to the end in the same abstinence which I have hitherto observed from *ideological* discussions; considering the mechanism of our thoughts to be a topic distinct from and irrelevant to the principles and rules by which the trustworthiness of the results of thinking is to be estimated. Since, however, a work of such high pretensions, and, it must also be said, of so much real merit, has rested the whole theory of induction upon such *ideological* considerations, it seems necessary for others who follow, to claim for themselves and their doctrines whatever position may properly belong to them on the same metaphysical ground. And this is the object of the succeeding chapter.—*J. S. Mill, System of Logic*, pt. iv. ch. i. § 4.

Ideólogy. *s.* [Gr. λόγος = word, doctrine, system, principle.] Mental philosophy; psychology.

Our neighbours, in the mean time, have made choice of the term *ideology* (a Greek compound involving the very word we have been attempting to discard) to express that department of knowledge which has been called the science of the human mind.—*D. Stewart, Philosophical Essays*, 3. (Rich.)

Ides. *s.* [Lat. *idus*.] A term anciently used among the Romans, and still retained in the Romish kalendar. It is the 13th day of each month, except in the months of March, May, July, and October, in which it is the 15th day, because in these four months it was six days before the nones, and in the others four.

A soothsayer bids you beware the *ides* of March. —*Shakespear, Julius Cæsar*, i. 2.

Idiocy. *s.* [Gr. ἰδιωτεία.] State of an Idiot.

I stand not upon their *idiocy* in thinking that horses did eat their bits.—*Bacon.*

Idiocy is characterized by the want of mental power being congenital. While mania or monomania and dementia form the 'dementia accidentalis,' *idiocy* forms the 'dementia naturalis' of lawyers. This intellectual deficiency is marked by a peculiar physiognomy, an absence of all expression, and a vague and unmeaning look, whereby an idiot may in general be clearly identified. In many cases of congenital deficiency, the mind is capable of receiving a few ideas, and of profiting to a certain extent by instruction. To this state the term *imbecility* is applied. It may be regarded as a minor degree of *idiocy*.—*Dr. A. S. Taylor, Medical Jurisprudence*, ch. lxv.

Idiom. *s.* [Gr. ἴδιωμα, -ατος; ἴδιος = private, peculiar.] Mode of speaking peculiar to a language or dialect; particular cast of a tongue; phrase; phraseology.

He did romanize our tongue, leaving the words translated as much Latin as he found them; wherein he followed their language, but did not comply with the *idiom* of ours.—*Dryden.*

Some that with care true eloquence shall teach,
And to just *idioms* fix our doubtful speech. *Prior.*

The great pest of speech is frequency of translation. No book was ever turned from one language into another, without imparting something of its native *idiom*; this is the most mischievous and comprehensive innovation; single words may enter by thousands, and the fabrick of the tongue continue the same, but new phraseology changes much at once; it alters not the single stones of the building, but the order of the columns.—*Johnson, Preface to Dictionary.*

The British, to speak plainly, has little or no resemblance to the English. Many of their terms may have gained admission among us; as from the vicinity and long intercourse we have had with that

people may necessarily be imagined; but their *idioms* and genius are as radically and essentially different as any two languages can possibly be.—*Drake, On the Origin of the English Language, Archæologia*, vol. v. p. 317.

The language of Sévigné and Hamilton is eminently colloquial; scarce a turn occurs in their writings which they would not have used in familiar society; but theirs was the colloquy of the gods, ours of men; their *idiom*, though still simple and French, had been refined in the saloons of Paris, ... while in our own contemporary writers, with little exception, there is what defaces the dialogue of our comedy, a tone not so much of provincialism, or even of what is called the language of the common people, as of one much worse, the dregs of vulgar ribaldry, which a gentleman must clear from his conversation before he can assert that name.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. iv. ch. vii. § 32.

Idiomátic. *adj.* Peculiar to a tongue; phraseological.

Since phrases used in conversation contract meanness by passing through the mouths of the vulgar, a poet should guard himself against *idiomatick* ways of speaking.—*Spectator.*

The characteristics of English writers in the first division of the [17th] century were not maintained in the second, though the change, as was natural, did not come on by very rapid steps. The pedantry of unauthorised Latinisms, the affectation of singular and not generally intelligible words from other sources, the love of quaint phrases, strange analogies, and ambitious efforts at antithesis, gave way by degrees; a greater ease of writing was what the public demanded, and what the writers after the Restoration sought to attain. They were more strictly *idiomatic* and English than their predecessors.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. iv. ch. vii. § 32.

Idiomátical. *adj.* Same as Idiomatic.

Milton mistakes the *idiomatical* use and meaning of 'munditiæ.'—*T. Warton, Notes on Milton's Smaller Poems.*

Idiopáthic. *adj.* In *Medicine.* Occurring as a separate and independent ailment, rather than as a symptom (συν = with + πτῶμα = falling, occurrence, or casualty) of, and sympathetically (σὺν = with + πάθος) with, anything else. Sympathetic being the term to which it is most specially opposed.

It has been customary with authors to call all these cases of tetanus, which are not brought on by wounds, symptomatic; they are no more so than those which are said to be *idiopathic.*—*Dr. Rush, On Tetanus.* (Ord MS.)

Idiópathy. *s.* [Gr. πάθος = suffering; root of πάσχω = suffer.] Peculiar sensibility.

Men are so full of their own fancies and *idiopathies*, that they scarce have the civility to interchange any words with a stranger.—*Dr. H. More, Song of the Soul*, preface to pt. ii.

An elephant hath his *idiopathy*, and a man his, at the hearing of a pipe: a cat, and an eagle, at the sight of the sun.—*Ibid.* notes, p. 429.

Idiosýncrasy. *s.* [Gr. ἴδιος = private, peculiar + σὺν = with + κρᾶσις = mixture.] Peculiar temper or disposition of body not common to another.

Whether quails, from any *idiosyncracy* or peculiarity of constitution, do innocuously feed upon hellebore, or rather sometimes but medicinally use the same.—*Sir T. Browne, Vulgar Errours.*

The understanding also hath its *idiosyncracies*, as well as other faculties.—*Glanville, Scepsis Scientifica.*

Ídiot. *s.* [Gr. ἰδιώτης = private person; one who takes no part in public matters. Hence, one who is ill-informed, or destitute of intellectual sympathies; the import becoming more and more disparaging as the word grew older. In the 16th century it had a weaker meaning than at present. *Idiot*, neither fool ne wise; half innocent. *Promptorium Parvulorum.* — Wedgwood.] Fatuous person; one with a congenital deficiency of intellect; foolish, silly, weak person. For its medical and medico-legal import see second extract under Idiocy.

[Life is] a tale,
Told by an *idiot*, full of sound and fury,
Signifying nothing. *Shakespear, Macbeth*, v. 5.

What else doth he herein, than by a kind of circumlocution tell his humble suppliants that he holds them *idiots*, or base wretches, not able to get relief?—*Sir W. Raleigh, Essays.*

By idle boys and *idiots* vilify'd,
Who me and my calamities deride. *Sandys.*

Things not understood of them who are but *ideots*, and understand no other than their mother tongue. —*Knatchbull, Annotations on* 1 *Corinthians*, xiii. 13.

Many *idiots* will believe that they see what they only hear.—*Dennis.*

To Idiocy (sometimes spelt Idiotcy) there is sometimes given the sound of a *-t*, as if the notion of the idiotic character was conveyed by the affix *-cy*, and the *-t-* belonged to the word Idiot. The formation, however, is that of such words as Prophecy, which is *prophet-cy*, but from προφητεία.

Idiótic. *adj.* Having the character of an idiot.

The stupid succession persisted to the last, in maintaining that the sun, moon, and stars, were no bigger than they appeared to the eye; and other such *idiotic* stuff, against mathematical demonstration.—*Bentley, Phileutherus Lipsiensis*, § 49.

Idiótical. *adj.*

1. Same as Idiotic.
2. Idiomatic. *Rare; and faulty, as being both unnecessary and ambiguous.*

The language of the sublimest authors of Greece is, upon occasion, *idiotical* and vulgar.—*Blackwall, Sacred Classics*, i. 271.

Idiotism. *s.* [from *idiot.*]

1. Folly; natural imbecility of mind.

The wisdom of this world is *idiotism*;
Strength a weak reed. *Decker, Old Fortunatus.*

5. The idols of Bacon.

Of the splendid passages in the Novum Organum none are perhaps so remarkable as his celebrated division of fallacies, not such as the dialecticians had been accustomed to refute, depending upon equivocal words, or faulty disposition of premises, but lying far deeper in the natural or incidental prejudices of the mind itself. These are four in number: *idola* tribûs, to which, from certain common weaknesses of human nature, we are universally liable; *idola* specûs, which from peculiar dispositions and circumstances of individuals mislead them in different manners; *idola* fori, arising from the current usage of words, which represent things much otherwise than as they really are; and *idola* theatri, which false systems of philosophy and erroneous methods of reasoning have introduced. Hence, as the refracted ray gives us a false notion as to the place of the object whose image it transmits, so our own minds are a refracting medium to the objects of their own contemplation, and require all the aid of a well-directed philosophy either to rectify the perception, or to make allowances for its errors. These *idola*, εἴδωλα, images, illusions, fallacies, or, as Lord Bacon calls them in the Advancement of Learning, false appearances, have been in the market-place. But it seems better, unless we retain the Latin name, to employ one of the synonymous terms given above. For the use of *idol* in this sense is little warranted by the practice of the language, nor is it found in Bacon himself, but it has misled a host of writers, whoever might be the first that applied it, even among such as are conversant with the Novum Organum.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. iii. ch. iii. §§ 58, 59.

The state of *idolaters* is two ways miserable: first, in that which they worship they find no succour; and secondly, at his hands, whom they ought to serve, there is no other thing to be looked for but the effects of most just displeasure, the withdrawing of grace, dereliction in this world, and in the world to come confusion.—*Hooker, Ecclesiastical Polity.*

2. Want of knowledge respecting some particular thing.

It is in every body's power to pretend *ignorance* of the law.—*Sherlock.*

Of future events, that Being, and no other, can have the same knowledge as of the past, who is acquainted with all the causes, remote or immediate, internal and external, on which each depends. But every one is accustomed to anticipate future events, in human affairs, as well as in the material world, in proportion to his knowledge of the several circumstances connected with each; however different in amount that knowledge may be, in reference to different occurrences. And in both cases alike, we always attribute the failure of any anticipation to our *ignorance* or mistake respecting some of the circumstances. When, e.g. we fully expect, from our supposed knowledge of some person's character, and of the circumstances he is placed in, that he will do something which, eventually, he does not do, we at once and without hesitation conclude that we were mistaken either as to his character, or as to his situation, or as to our acquaintance with human nature, generally.—*Whately, Logic, Appendix I., Ambiguous Terms*, xi.

It is much to be ascribed to the *immediate* will of God, who giveth and taketh away beauty at his pleasure.—*Abbot.*

Had Hylas, as he should have done, taken the same ground, the dialogue would have run thus:—*Philonous.* Is material substance a senseless being, or a being endowed with sense and perception?—*Hylas.* I cannot say.—*Philonous.* How do you mean you cannot say?—*Hylas.* I mean that like you, 'I know nothing' of any qualities of bodies save those I *immediately* perceive through the senses; and I cannot *immediately* perceive through the senses whether material substance is senseless or not.—*Philonous.* But you do not doubt that it is senseless?—*Hylas.* Yes; in the same way that you doubt my external reality—doubt whether I am anything more than one of your ideas. Did we not, at the beginning, Philonous, distinguish between things known *immediately* and things known *mediately*?—*Philonous.* Yes.—*Hylas.* Did you not make me admit that sensations are the only sensible things; that is, the only things *immediately* perceived; and that I cannot know the causes of these sensations *immediately*, but can only know them *mediately* by reasoning?—*Philonous.* I did.—*Hylas.* And your whole argument is an attempt to show that these things which I know *mediately*—these things, whose existence I infer as the causes of my sensations, do not exist at all.—*Philonous.* True.—*Hylas.* How, then, can you put any trust in my reply, when I either say that matter is sensitive, or that it is not sensitive? The only sensitiveness that I can *immediately* perceive is my own.—*Philonous.* You know that I am sensitive.—*Hylas.* Yes, but how? I see you turn when spoken to, and shrink when burned; from such facts, joined with my personal experiences, I infer that you are sensitive as I am; and if you must have an answer to your question, I infer that matter is not sensitive, because it shows no such signs.—*Philonous.* Well.—*Hylas.* Well! do you not see that if you adopt this answer your whole reasoning is vitiated? You set out to disprove a certain portion of my *mediate* knowledge. To do this, you now ask from me another portion of my *mediate* knowledge, as you have already asked several, and will, I suppose, ask more. You are combining these many portions of *mediate* knowledge, and will draw from them a conclusion; and this conclusion—this piece of doubly *mediate* knowledge, you will, I suppose, offer to me in place of the *mediate* knowledge you would disprove. Certainly I shall reject it. I demand that every link in your argument shall consist of *immediate* knowledge. If but one of them is an inference, and not a thing '*immediately* perceived by sense,' I shall say that your conclusion has the same uncertainty with this that you combat, plus the uncertainty attendant on all argument. Nay, indeed, were every step in your demonstration a piece of *immediate* knowledge, I should argue that as the inference you drew was but *mediate* knowledge, it could have no greater warrant than the adverse one.—*Herbert Spencer, Principles of Psychology.*

These words are entered as they stood in the previous editions, except that *impórt* = importance is entered as a separate word. That it is separated from *import* (the opposite to *éxport*) is shown by its accent. Whether there are not *two* other, or rather two pairs of words besides, is doubtful.

1. It is certain that the element *-in-* has two meanings. In *impórt* and *import* conveying the notion of *tendency*, *bearing*, and the like, it means *within*, and signifies that which the importing agent carries with it. In *impórt* and *import* as used in commerce, it means *into*, i.e. delivery at one spot after conveyance from another.

2. Again, though *porto* = carry stands in the previous editions as the common basis of the two words, a case may be made out in favour of *portus* = port being the root of the commercial terms. If so, the existence of a second pair of words is beyond doubt.

The accent is doubtful. Spenser writes *impórtune* both for the *adjective* and the verb; Milton (for the adjective) *importúne*. The current rule is that not only the verb and noun be distinguished by their accents, but that the accent of the verb be on the final syllable. This, of course, gives Importúne, *v.* and Impórtune, *adj.* The adjective, however, has probably been used in conversation by no living speaker, *importúne* being a common pronunciation. *Importúnity* suggests it. The analogy of *opportúne* complicates rather than simplifies the question. That the accent is as I have given will scarcely be denied. It is only the adjective, however, which exists. There is no such *verb* as *opportune*, and few (or no) modern instances of such an *adjective* as *importune.*

Importúnely. *adv.* In an importune manner.

Than witches, which *impossible* confess.
Donne, Poems, p. 71.

Impossibílity. *s.*

1. Incapability of being done; that which cannot be done.

Though men do, without offence, wish daily that the affairs, which with evil success are past, might have fallen out much better; yet to pray that they may have been any other than they are, this being a manifest *impossibility* in itself, the rules of religion do not permit.—*Hooker, Ecclesiastical Polity.*

Impossibilities! oh no, there's none,
Could I bring thy heart captive home. *Cowley.*

According to the definition we may choose to give [of the word *impossibility*], it may be said either that there are three species of it, or that it may be used in three different senses. 1st. What may be called a mathematical *impossibility*, is that which involves an absurdity and self-contradiction; e.g. that two straight lines should enclose a space, is not only *impossible* but inconceivable, as it would be at variance with the definition of a straight line. And it should be observed, that inability to accomplish any thing which is, in this sense, *impossible*, implies no limitation of power, and is compatible, even with omnipotence, in the fullest sense of the word. If it be proposed, e.g. to construct a triangle having one of its sides equal to the other two, or to find two numbers having the same ratio to each other as the side of a square and its diameter, it is not from a defect of power that we are precluded from solving such a problem as these; since in fact the problem is in itself unmeaning and absurd: it is, in reality, nothing, that is required to be done. It is important to observe respecting an *impossibility* of this kind, that it is always susceptible of demonstrative proof. Not that every such *impossibility* has actually been proved such: or that we can be certain it ever will be; but that it must be in itself capable of proof:—the materials of such proof—the data on which it may be founded,—being (whether discovered or not) within the range of our knowledge. This follows from the very character (as above described) of such truths as the mathematical: mathematical-*impossibilities* being of course included under that term. For, every such truth must be implied—however tedious and difficult may be the task of eliciting it—in the definitions we set out with, and consequently in the terms, which are the exact representatives of those definitions: e.g. that any two sides of a triangle are greater than the third—in other words, that it is *impossible* to construct a triangle, one of whose sides shall be equal to the other two—is a matter of easy and early demonstration. The incommensurability of the side and the diameter of a square,—in other words, the *impossibility* of finding two numbers having to one another the ratio of the side to the diameter,—is a truth which was probably believed some time before a demonstration of it was found: but it is no less implied in the definitions of 'straight line,' 'square,' &c. In the case of the circle again, the ratio of the diameter to the circumference has been long sought by mathematicians; and no one has yet demonstrated, or perhaps ever will, either, what their ratio is, or, on the other hand, that they are incommensurable: but one or the other must be within the sphere of mathematical demonstration. When therefore any one says that perhaps so and so may be an *impossibility* in the mathematical sense, though we may never be able to prove it such, he is to keep in mind that at least such proof is within the scope of inquiry, and that no increase of knowledge, in the sense of 'information respecting facts,' can be needed to furnish materials for the demonstration. Every such *impossibility* must be implied—though we may not perceive it, in the terms employed; in short, it must be properly a 'contradiction in terms.' 2ndly. What may be called a physical *impossibility* is something at variance with the existing laws of nature, and which consequently no being subject to those laws (as we are), can surmount: but we can easily conceive a being capable of bringing about what in the ordinary course of nature is *impossible*: e.g. to multiply five loaves into food for a multitude, or to walk on the surface of the waves, are things physically *impossible*, but imply no contradiction; on the contrary, we cannot but suppose that the Being, if there be such an one, who created the universe, is able to alter at will the properties of any of the substances it contains. . . 3rdly. Moral *impossibility* signifies only that high degree of improbability which leaves no room for doubt. In this sense we often call a thing *impossible*, which implies no contradiction, or any violation of the laws of nature, but which yet we are rationally convinced will never occur, merely from the multitude of chances against it; as, e.g. that unloaded dice should turn up the same face, one hundred times successively. And in this sense, we cannot accurately draw the line, so as to determine at what point the improbability amounts to an *impossibility*; and hence we often have occasion to speak of this or that as almost *impossible*, though not quite, &c. The other *impossibilities* do not admit of degrees of approach. That a certain throw should recur two or three times successively, we should not call very improbable; the improbability is increased at each successive step: but we cannot say exactly when it becomes *impossible*; though no one would scruple to call one hundred such recurrences *impossible*.—*Archbishop Whately, Elements of Logic*, appendix, Ambiguous Terms, xi. Impossibility.

Both these are fiercely excluded from his all-embracing charity.—*Milman, History of Latin Christianity*, b. xiv. ch. vii.

Sterility most frequently depends upon the female, although it sometimes is owing to the male; and, in a practical point of view, if not in a

In-. Inseparable element in a long list of compounds. It is always a prefix. Followed by *b*, *p*, or *m*, it becomes *im-*, as may be seen from the preceding entries. Followed by *l*, it becomes *l*: by *r*, *r*—as in *illaudable*, *irreligious*, &c. How it comports itself before *gn*, though there are but few words which illustrate the change it undergoes, is worth noticing as an interesting point in general philology. Before *gn-*, it loses its consonantal element altogether, and becomes simply *i*, as in *i-gnoble*; for such is the etymological division of this word. The only other entries are *i-gnore*, and *i-gnominy*, with their derivatives. *I-gnoscible*, from *ignosco* = pardon, is entered by Johnson, and retained by Todd, but without an example. Neither do I find more than these in the Basis of Comparison (Third Period) of the Philological Society. This form, then, is rare.

Nevertheless, it exemplifies a series of words in which an original *g* has, to a great extent, disappeared; only, however, in the simple word. And that naturally; inasmuch as *g* and *h*, followed by *n* in the same syllable, have a tendency in many languages, to drop off. They do so, as

far as pronunciation is concerned, in our own, though not in the allied languages; *knabe* (*knave*), *knecht* (*knight*), &c. being sounded in German with the initial *k* distinctly heard. In Greek, too, words like γνώμη are commoner than words like *gnavus* in Latin, where *natus* is commoner than *gnatus*—the Latin giving both *in-natus* and *co-gnatus*. But the compounds may keep what the root rejects; and that for a plain reason. Prefix a word like *co-*, to *gnatus*, and the *g*, by being divided between two syllables, gains in facility of pronunciation. Hence, certain combinations preserve the *g* that the fundamental word has lost.

In the matter of sound this *g* might comport itself in two ways. (1) It might be sounded with the *-i-*, and, so sounded, look as if it were simply a part of the negative prefix; a mere modification of the *n* of *in-*; or (2) it might become *-ng-*, giving in the first instance the combination *ingnobolis*, the *g* of the root having lost its power as a separate consonant, but having nasalized the *n* of the prefix. The first of these alternatives is what we find in our own language. In the French the second seems to have prevailed. The French *ignoble* is sounded more like *in-yoble* (though it is needless to say that this is but the roughest of approximations to the true sound) than *ig-noble*. Now here the *y* sound represents the *g*, and *follows*, instead of (as in English) *preceding* the *n*. But there are two *n*'s, the *n* of *noble*, and the *n* of *in*. It is suggested that it is the *former* which is dropped, and that it is the latter which is preserved. If so, a curious point of orthography has been illustrated; one which is generally explained by supposing a transposition. The doctrine here conveyed gives no transposition; merely the fact that out of two *n*'s, with a softened *g* between them, the second is lost.

It is chiefly as a Latin adverb that *in* is used, and it has three powers; (1) as in *in-struo*, whence *in-struct*; (2) as in *in-cludo*, whence *in-clude* or shut *in*; (3) as in *in-tolerable*, where its import is negative, i.e. that of the English *not*, and *un-*, as in *un-known*.

1. The *import* of *in-*, in the compounds of the first division, though of great importance and some obscurity in Latin, is of little note in English. In English this prefix exists only so far as it belongs to certain words which have been introduced from the Latin as *wholes*. There being no such separable particle in English, we never have recourse to it in making compounds; and there is no ambiguity. In French it occurs as *en-*, and between words of French and Latin origin there is sometimes room for doubt. As a general rule, however, the distinction is clear. *Enchantment* is French; *incantation*, Latin: one from *canto* directly; one from *canto* indirectly.

2. For the *in-* inclusive, see En-.

3. The *in-* negative is what commands attention here.

With the compounds of *in-*, having the power of a negative, the chief complication arises from the concurrent use of the English prefix *un-*. This often precedes even words of Latin origin.

When do we use *in-*, and when *un-*? The rule that carries us the farthest is this,—that for *in-* to be used, the word should be wholly, and either actually or possibly Latin; one that is introduced into the English as a complete and ready-made word. The least intermixture of an English element mars the compound. A good word to illustrate this is *ineffable*. There is the Latin word *ineffabilis* (unspeakable), and there is no such English word as *effable*; except, of course, so far as it has been derived from its commoner compound. This may always happen; but a very little thought tells us that the secondary word is not always the oldest, i.e. *as an English word*.

The two most notable exceptions are *insufferable* and *inability*. *Sufferable* and *ability* are English—not Latin. Yet *unsufferable* and *unability* (spite of *unable*) sound harshly. The doctrine that explains the first of these hybrid terms is that, as *sufferable* = *tolerable*, *in-sufferable* has been suggested, as a sort of concurrent form, for *in-tolerable*. *Inability* may be explained in two ways. Though *able* is English, *habilis* is Latin. I prefer, however, looking to the coincidence of *-ability*, as in penetr-*ability*, &c., in its character of a derivational element, with *ability* as a whole word in English. Such is the explanation for the two most notable exceptions to the rule laid down.

How far does the rule apply? In the main it applies to words *in the first instance only*. A word, to begin with the negative *in-*, must be *originally* a Latin word; but when introduced into English, it may, to a certain extent, be treated as an English root. The adverbial affix *-ly* is English; yet we may say *in-constant-ly* and *in-cessant-ly*. The affix *-ness* is in the same predicament: yet it may easily be used too freely. To words like *submissiveness*, he would be an over-nice purist who objected. Yet, unless the pure notion of abstraction were to be expressed for some metaphysical purpose, most of us would prefer the approximate abstract *penetrability* to the more (logically) correct *penetrableness*. In fact, there are so many cases where the true Latin forms in *-tude*, *-ion*, and *-ity*, are so near in meaning to the English form in *-ness*, that hybridism may be avoided with a gain on the side of purity and no great loss on that of logic. If *-ness*, however, be used, *-in* and not *-un*, is the right prefix. In like manner the participial forms in *-ate* are better than the true English participles in *-ated*, and *inanimate* better than *inanimated*: for which latter word, even independent of the shade of difference in its import, *un-*animated is the better form.

We have now taken due cognizance of the statement, that in order to be preceded by *in-* a word must be Latin. How far must Latin words *not* be preceded by *un*? *Naturalis* is Latin, *conscius* is Latin, and *congruus* is Latin. Nevertheless, while we say *in-*congruous, we say *un-*conscious, and *un-*natural; not to mention the fact of such a word as *im-*polite being exceptionable. Concerning these it may be said that certain words, though of Latin origin, are so thoroughly Anglicized as to comport themselves in composition as English. I doubt, however, whether the explanation does not lie deeper. There are several compounds in which the Latin language favoured *in-* less than certain combinations of *non* (not), and *minime* (in the least degree). *Conscius* was, certainly, one of these; *non-conscius*, *non-naturalis* (in the Latin stages of the language), *minime politus* being common. The rationale of these is a point of Latin philology. It is indicated, however, here for the sake of showing that in the laying down a rule the main exceptions have not been either overlooked or kept back.

The question occurs whether Natural History can be applied to *inorganic* substances? And the answer to this question is, that it can be applied, if these are such things as *inorganic individuals*, since the resemblances and differences with which natural history has to do are the resemblances and differences of *individuals.* What is an *individual?* It certainly is not that which is so simple that it cannot be divided. Individual animals are composed of many parts. But if we examine, we shall find that our idea of an *individual* is, that it is a whole composed of parts, which are not similar to the whole, and have not an independent existence, while the whole has an independent existence and a definite form. What then is the mineralogical *individual?* At first, while minerals were studied for their use, the most precious of the substances which they contained was looked upon as the characteristic of the mineral. The smaliest trace of silver made a mineral an ore of silver. Thus forms and properties were disregarded, and substance was considered as identical with mineral. And hence Daubenton refused to recognize species in the mineral kingdom, because he recognised no *individuals.* He proposed to call sorts what we call species. In this way of considering minerals, there are no *individuals.* But still this is not satisfactory; for if we take a well-formed and distinct crystal, this clearly is an *individual.* It may be objected, that the crystal is divisible (according to the theory of crystallography) into smaller solids; that these small solids are really the simple objects; and that actual crystals are formed by combinations of these molecules according to certain laws. But, as we have already said, an *individual* is such, not because it cannot be divided, but because it cannot be divided into parts similar to the whole.

As to the division of the form into its component laws, this is an abstract proceeding, foreign to natural history. Therefore there is so far nothing to prevent a crystal from being an *individual*.—*Whewell, History of Scientific Ideas*, vol. ii. p. 148: ed. 1858.

(See also under Individuality.)

Individuálity. *s.* Separate or distinct existence.

He would tell his instructor, that all men were not singular; that *individuality* could hardly be predicated of any man; for it is commonly said that a man is not the same he was, and that mad men are beside themselves.—*Arbuthnot.*

What is an *individual?* . . . As applied to a man, or to any one of the higher animals, which are all sharply-defined and independent, the word *individual* has a clear meaning. . . . But when we extend our range of observation to the organic world at large, we find that difficulties . . . meet us everywhere under every variety of form. Each uniaxial plant may perhaps fairly be regarded as a distinct *individual*. . . . What, however, are we to say of a multiaxial plant? It is, indeed, usual to speak of a tree with its many branches and shoots as singular; but strong reasons may be urged for considering it as plural. . . . Shall we regard all the growing axes . . . resulting from slips and grafts and buds, as parts of one *individual*, or as distinct *individuals?* If a strawberry-plant sends out runners carrying buds at their ends, which strike root and grow into independent plants, that separate from the original one by decay of the runners, must we not say that they possess separate *individualities*; and yet if we do this, are we not at a loss to say when their separate *individualities* were established, unless we admit that each bud was from the beginning an *individual?* . . . The animal kingdom presents still greater difficulties. When, from sundry points on the body of a common polype, there bud-out young polypes, which, after acquiring mouths and tentacles and closing up the communications between their stomachs and the stomach of the parent, finally separate from the parent; we may with propriety regard them as distinct *individuals*. But when, in the allied compound hydrozoa, we find that these young polypes continue permanently connected with the parent; . . . it is no longer so clear that these little sacs furnished with mouths and tentacles, are severally to be regarded as distinct *individuals*. We cannot deny a certain *individuality* to the polypedom. And on discovering that some of the buds . . . are transformed into capsules in which eggs are developed . . . we have still clearer proof that the *individualities* of the members are partially merged in the *individuality* of the group. Other organisms belonging to the same order, display still more decidedly this transition from simple *individualities* to a complex *individuality*. . . . To meet these difficulties, it has been proposed that the whole product of a single fertilized germ shall be regarded as a single individual: whether such whole product be organised into one mass, or whether it be organised into many masses, that are partially or completely separate. . . . It seems a questionable use of language to say that the countless masses of Anacharis Alsinastrum, which, within these few years, have grown up in our rivers, canals, and ponds, are all parts of one *individual*; and yet as this plant does not seed in England, these countless masses, having arisen by discontinuous development, must be so regarded, if we accept the above definition. . . . There is, indeed, . . . no definition of *individuality* that is unobjectionable. All we can do is to make the best practicable compromise. As applied either to an animate or an inanimate object, the word *individual* ordinarily connotes union among the parts of the object and separateness from other objects. This fundamental element in the conception of *individuality*, we cannot with propriety ignore in the biological application of the word. That which we call an *individual* plant or animal, must, therefore, be some concrete whole, and not a discrete whole. If, however, we say that each concrete living whole is to be regarded as an *individual*, we are still met by the question—What constitutes a concrete living whole? A young organism arising by internal or external gemmation from a parent organism, passes gradually from a state in which it is an indistinguishable part of the parent organism, to a state in which it is a separate organism of like structure with the parent. At what stage does it become an *individual?* And if its *individuality* be conceded only when it completely separates from the parent, must we deny *individuality* to all organisms thus produced, which permanently retain their connexions with their parents? . . . To answer such questions, we must revert to the definition of Life. The distinction between *individual* in its biological sense, and *individual* in its more general sense, must consist in the manifestation of Life, properly so called. . . . Hence a biological *individual* is any concrete whole having a structure which enables it, when placed in appropriate conditions, to continuously adjust its internal relations to external relations, so as to maintain the equilibrium of its functions.—*Herbert Spencer, Inductions of Biology*, §§ 72-74.

An *induction* to those succeeding evils, which pursued that inconsiderate marriage.—*Sir G. Buck, History of King Richard III.* p. 118.

2. In *Logic*. Reasoning from the more particular to the more general, as opposed to *deduction*, which is reasoning from the more general to the more particular; an approximate translation of the Greek ἐπαγώγη (ἐπί = on + ἄγω = lead; Lat. *duco*, signifying the *leading-on*, or *bringing-on*, of particular examples or instances, each confirming, or helping to confirm, the inference suggested by the preceding).

Induction is when, from several particular propositions, we infer one general: as, the doctrine of the Socinians cannot be proved from the gospels, it cannot be proved from the Acts of the Apostles, it cannot be proved from the epistles, nor the book of Revelation; therefore it cannot be proved from the New Testament.—*Watts, Logick.*

The inquisition by *induction* is wonderful hard; for the things reported are full of fables, and new experiments can hardly be made but with extreme caution.—*Bacon.*

Mathematical things are only capable of clear demonstration: conclusions in natural philosophy are proved by *induction* of experiments, things moral by moral arguments, and matters of fact by credible testimony.—*Archbishop Tillotson.*

Although the arguing from experiments and observations by *induction* be no demonstration of general conclusions, yet it is the best way of arguing which the nature of things admits of, and may be looked upon as so much the stronger by how much the *induction* is more general; and if no exception occur from phænomena, the conclusion may be general.—*Sir I. Newton, On Opticks.*

We have found, that the mental process with which Logic is conversant, the operation of investigating truths by means of evidence, is always, even when appearances point to a different theory of it, a process of *induction*. And we have particularised the various modes of *induction*, and obtained a clear view of the principles to which it must conform, in order to lead to results which can be relied on. The consideration of *induction*, however, does not end with the direct rules for its performance. Something must be said of those other operations of the mind, which are either necessarily presupposed in all *induction*, or are instrumental to the more difficult and complicated *inductive* processes. . . . *Induction* being merely the extension to a class of cases, of something which has been observed to be true in certain individual instances of the class; the first place among the operations subsidiary to *induction*, is claimed by observation.—*J. S. Mill, System of Logic*, pt. iv. ch. i. § 1.

In purgatory, *indulgences*, and supererogation, the assertors seem to be unanimous in nothing but profit.—*Dr. H. More, Decay of Christian Piety.*

The doctrine of *indulgences*, as it was before the council of Trent, and hath been since taught in the church of Rome, is big with gross errors. It depends on the fiction of purgatory; it supposeth a superfluity of the satisfactions of the saints; which, being jumbled together (horreo referens) with the merits and satisfaction of our Saviour, make up one treasury of the church; that the bishop of Rome keeps the key of it, as having the sole power of granting *indulgences* either by himself immediately, or by others commissioned from him. Lastly, it very absurdly extends the effect of the power of the keys, left by Christ in his church, to men in the other world.—*Bishop Bull, Corruptions of the Church of Rome, in Answer to the Bishop of Meux's Queries.*

Leo X. is deservedly infamous for his base prostitution of *indulgences*.—*Bishop Atterbury.*

The cause of all things is by you assigned.
Sir R. Blackmore.

Inértia. *s.* [Lat.]

1. Sluggishness; dullness.
2. In *Mechanics.* Resistance to be overcome before a body in a state of rest is put into motion.

We can push a light boat rapidly through the water; but we may go on increasing its freight, till we are barely able to stir it. This property of matter, then, by which it resists the reception of motion, or rather by which it reacts and requires an adequate force in order that any motion may result, is called its inertness, or *inertia*. That matter has such a property, is a conviction flowing from that idea of a reaction equal and opposite to the action, which the conception of all force involves. By what laws this *inertia* depends on the magnitude, form, and material of the body, must be the subject of our consideration hereafter. But that matter has this *inertia*, in virtue of which, as the matter is greater, the velocity which the same effort can communicate to it is less, is a principle inseparable from the notion of matter itself. Hermann says that Kepler first introduced this 'most significant' *inertia*. Whether it is to be found in earlier writers I know not; Kepler certainly does use it familiarly in those attempts to assign physical reasons for the motions of the planets which were among the main occasions of the discovery of the true laws of mechanics. He assumes the slowness of the motions of the planets to increase, (other causes remaining the same,) as the *inertia* increases; and though, even in this assumption, there is an errour involved, (if we adopt that interpretation of the term *inertia* to which subsequent researches led,) the introduction of such a word was one step in determining and expressing those laws of motion which depend on the fundamental principle of the equality of action and reaction.—*Whewell, History of Scientific Ideas.*

Respectabilities, though they will vote, will not fight. Possession always is nine points in law; but in lawsuits of this kind, one may say, it is ninety-and-nine points. Men do what they were wont to do; and have immense irresolution and *inertia*: they obey him who has the symbols that claim obedience.—*Carlyle, History of the French Revolution.*

These *inferences* or conclusions are the effects of reasoning, and the three propositions, taken all together, are called syllogism or argument.—*Watts.*

Induction being merely the extension to a class of cases of something which has been observed to be true in certain individual instances of the class; the first place among the operations subsidiary to induction is claimed by observation. . . . The sole condition is, that what is supposed to have been observed shall really have been observed; that it be an observation, not an *inference*. For in almost every act of our perceiving qualities, observation and *inference* are intimately blended. What we are said to observe is usually a compound result, of which one-tenth may be observation, and the remaining nine-tenths *inference*. I affirm, for example, that I hear a man's voice. This would pass, in common language, for a direct perception. All, however, which is really perception, is that I hear a sound. That the sound is a voice, and that voice the voice of a man, are not perceptions but *inferences*. I affirm, again, that I saw my brother at a certain hour this morning. If any proposition concerning a matter of fact would commonly be said to be known by the direct testimony of the senses, this surely would be so. The truth, however, is far otherwise. I only saw a certain coloured surface; or rather I had the kind of visual sensations which are usually produced by a coloured surface; and from these as marks, known to be such by previous experience, I concluded that I saw my brother. I might have had sensations precisely similar, when my brother was not there. I might have seen some other person so nearly resembling him in appearance, as, at the distance, and with the degree of attention which I bestowed, to be mistaken for him. I might have been asleep, and have dreamed that I saw him; or, in a state of nervous disorder, which brought his image before me in a waking hallucination. In all these modes, many have been led to believe that they saw persons well known to them, who were dead, or far distant. If any of these suppositions had been true, the affirmation that I saw my brother would have been erroneous.—*J. S. Mill, System of Logic*, pt. iv. ch. i. § 1.

Inferéntial. *adj.* Having the nature of inference.

We know by observation (omitting the *inferential* proofs of an existence for thousands of ages anterior) that these phenomena have continued for five thousand years.—*J. S. Mill, System of Logic*, pt. iii. ch. xix. § 2.

Innutrition. *s.* [the *n* double in sound as well as spelling.] Want of nutrition.

From the morphological differentiations caused by unlikenesses of nutrition which the whole plant feels, we pass now to those which are thus caused in some of its parts and not in others. Among such are the contrasts between flowering axes, and the axes that bear leaves only. It has already been shown that the belief expressed by Wolff in a direct connexion between fructification and *innutrition*, is justified inductively by many facts of many kinds. Deductively too, we saw reason to conclude that such a relation would be established by survival of the fittest; seeing that it would profit a species for its members to begin sending off migrating germs from the ends of those axes which *innutrition* prevented from further agamogenetic multiplication. Once more, when considering the nature of the phænogamic axis, we found support for this belief in the fact that the components of a flower exhibit a reversion to that type from which the phænogamic type has probably arisen—a reversion which the laws of embryology would lead us to look for where *innutrition* had arrested developement. Hence, then, we may properly count those deviations of structure which constitute inflorescence, as among the morphological differentiations produced by local *innutrition.*—*Herbert Spencer, Principles of Biology*, ch. xii. § 240.

Chuse a smooth part of the stock; then with your knife make a horizontal cut across the rind of the stock, and from the middle of that cut make a slit downwards, about two inches in length in the form of a T; but be careful not to cut too deep, lest you wound the stock; then having cut off the leaf from the bud, leaving the foot-stalk remaining, make a cross cut about half an inch below the eye, and with your knife slit off the bud, with part of the wood to it. This done, with your knife pull off that part of the wood which was taken with the bud, observing whether the eye of the bud be left t[illegible] for all these buds which lose their eyes in stripping, are good for nothing: then raising the bark of the stock, thrust the bud therein, placing it smooth between the rind and the wood of the stock; and so having exactly fitted the bud to the stock, tie them closely round, taking care not to bind round the eye of the bud.—*Miller.*

Instínct. *adj.* Moved; animated.

Reason, however able, cool at best,
Cares not for service, or but serves when press'd,
Stays till we call, and then not often near:
But honest *instinct* comes a volunteer.
Pope, Essay on Man, iii. 85.

There are many acts which man, as well as animals, performs by the guidance of nature, without seeing or seeking the reason why he does so; as, the acts by which he balances himself in standing or moving, and those by which he judges of the form and position of the objects around him. These actions have their reason in the principles of geometry and mechanics; but of such reasons he who thus acts is unaware: he works blindly, under the impulse of an unknown principle which we call *instinct*. When man's speculative nature seeks and finds the reasons why he should act thus or thus;—why he should stretch out his arm to prevent his falling, or assign a certain position to an object in consequence of the angles under which it is seen;—he may perform the same actions as before, but they are then done by the aid of a different faculty, which, for the sake of distinction, we may call insight. *Instinct* is a purely active principle; it is seen in deeds alone; it has no power of looking inwards; it asks no questions; it has no tendency to discover reasons or rules; it is the opposite of insight. Art is not identical with *instinct*; on the contrary, there are broad differences. *Instinct* is stationary; Art is progressive. *Instinct* is mute; it acts, but gives no rules for acting: Art can speak; she can lay down rules. But though Art is thus separate from *instinct*, she is not essentially combined with insight. She can see what to do, but she needs not to see why it is done. She may lay down rules, but it is not her business to give reasons. When man makes that his employment, he enters upon the domain of Science.—*Whewell, History of Scientific Ideas*, ch. viii.

Instínct. *v. a.* Impress as an animating power.

God would never have *instincted* the appetition of pleasure, and the faculties of enjoying it, so strongly in man, if He had not meant that in decency he should make use of them.—*Feltham, Resolves.*

Instínctment. *s.* Instigation. *Rare.*

Charity and probability would induce us to think that whosoever is morally honest, is so out of conscience in obedience to the commands of God, and the *instinctment* of nature, so framed and qualified by God himself, rather than out of sinister, lower, or less noble ends; and therefore I hold it to be most true, that as true religion cannot be without morality, no more can morality that is right be without religion.—*Felltham, Resolves.* (Ord MS.)

2. Positive law.

The precepts by which men are taught what to do are called *institution*; so Quintilian inscribed his book, De *Institutione* Oratoria, and Lactantius wrote *Institutions*, that is, commentaries on the precepts and laws of Christianity. But it hath in it this peculiarity of signification, that the word *institution* does signify properly rules and precepts of manners, properly the measures of practice, or rules teaching us what we are obliged to do; so that *institution* does not directly signify a commandment, but it supposes the persons obliged, only it superadds the manner and measure of obedience.—*Jeremy Taylor, Ductor Dubitantium*, i. 421. (Ord MS.)

Intênsity. *s.* Excess.

We cannot measure secondary qualities in the same manner in which we measure primary qualities, by a mere addition of parts. There is this leading and remarkable difference, that while both classes of qualities are susceptible of changes of magnitude, primary qualities increase by addition of extension, secondary, by augmentation of *intensity*. A space is doubled when another equal space is placed by its side; one weight joined to another makes up the sum of the two. But when one degree of warmth is combined with another, or one shade of red colour with another, we cannot in like manner talk of the sum. The component parts do not evidently retain their separate existence; we cannot separate a strong green colour into two weaker ones, as we can separate a large force into two smaller. The increase is absorbed into the previous amount, and is no longer in evidence as a part of the whole. And this is the difference which has given birth to the two words extended and intense. That is extended which has 'partes extra partes,' parts outside of parts: that is intense which becomes stronger by some indirect and unapparent increase of agency, like the stretching of the internal springs of a machine, as the term intense implies. Extended magnitudes can at will be resolved into the parts of which they were originally composed, or any other which the nature of their extension admits; their proportion is apparent; they are directly and at once subject to the relations of number. Intensive magnitudes cannot be resolved into smaller magnitudes; we can see that they differ, but we cannot tell in what proportion; we have no direct measure of their quantity. How many times hotter than blood is boiling water? The answer cannot be given by the aid of our feelings of heat alone.—*Whewell, Novum Organon renovatum,*

To raise its body through a given space, its muscles have to be contracted with twice the *intensity*, at a double cost of matter expended.—*Herbert Spencer, Inductions of Biology.*

Inter-. Element in composition from the Lat. *inter* = between, among. The French form is *entre*; which, in English, becomes *enter-*, as in *entertain.* That the two forms may be confounded with one another is what we expect from the confusion between **En-** and **In-**. The principle, however, which regulates their use is the same in both cases. When a word is introduced ready-made we take one form; when we put the parts together in English we take another. Thus we say *Entertain* and *Inter-meddle.* But, though the principle is the same, the application of it is different. As compared with *in,* the French *en* prevails, being used before even words of English origin. As compared with *entre* the Latin *inter* prevails, being used before both French and English words, as *intermarry, inter-leave.*

In respect to its import, *inter,* though it may signify both *among* and *between,* generally signifies the latter; with which power it is often prefixed to a word already suggestive of mutual action: being in such cases more or less unnecessary.

Mr. Collier appears to consider the *interludes* of John Heywood, the earliest of which must have been written before 1521, as first exhibiting the moral-play in a state of transition to the regular tragedy and comedy. . . . A notion of the nature of these compositions may be collected from the plot of one of them, 'A Merry Play betwene the Pardoner and the Frere, the Curate and neighbour Pratte,' printed in 1533. . . . Here . . . we have a dramatic fable, or incident at least, conducted not by allegorical personifications, but by characters of real life, which is the essential difference that distinguishes the true tragedy or comedy from the mere moral. Heywood's interludes, however, of which there are two or three more of the same description with this (besides others partaking more of the allegorical character), are all only single acts, or more than the mere rudiments or embryo of the regular comedy. . . . The earliest English comedy, properly so called, that has yet been discovered, is commonly considered to be that of Ralph Roister Doister. . . . This . . . would carry it back to about the same date with the earliest of Heywood's *interludes*; and it certainly was produced while that writer was still alive, and in the height of his popularity. It may be observed that Wilson calls Udall's play an *interlude*, which would therefore seem to have been at this time the common name of any dramatic composition, as indeed it appears to have been for nearly a century preceding. The author himself, however, in his prologue, announces it as a comedy, or *interlude*, and as an imitation of the classical models of Plautus and Terence.—*Craik, History of English Literature and of the English Language*, vol. i. pp. 445-7.

Endemic, or endemical, fevers assume two very different forms or characters, viz., the *intermittent* and the remittent. . . . *Intermittents* are readily distinguished from every other form of idiopathic fever, by their occurrence in paroxysms, each of which may be considered as an epitome of a febrile disease, exhibiting in the course of about eight hours all the stages of fever—its rise, progress, crisis, and termination in the recovery of health. This circumstance has contributed to give to *intermittent* fever a large share of the attention of pathologists. . . . The symptoms which occur in the paroxysm of an *intermittent* fever divide themselves in the first place into the two great classes of regular and superadded. The former admit of an obvious subdivision into three stages—the cold, the hot, and the sweating, in the course of which the different functions of the body undergo very remarkable changes. . . . After a certain interval, the train of symptoms now described is renewed, and the period of recurrence gives what is called the type of fever. From very early times, three primary types of *intermittent* have been observed—the quotidian, the tertian, and the quartan, in which the febrile paroxysm completes its revolution in the respective periods of twenty-four, forty-eight, and seventy-two hours. Of these the most common is the tertian, and this, therefore, is always considered as the primary type of fever. Several irregular types of *intermittent* fever have been noticed by authors, such as the double tertian, the semitertian, and the double quartan, but they are not of frequent occurrence. The double quartan may be taken as a specimen. In this variety of ague, paroxysms occur on two successive days, followed by one of intermission; the paroxysms of the first and fourth day corresponding in the character and the severity of the symptoms, as well as in the hour of attack; and so of the second and fifth, though varying in each of these points from the two others.—*Dr. Gregory, Theory and Practice of Medicine*, pt. i. ch. xi.

Íodine. *s.* [Gr. ἰον = violet.] A coined word, the *-ine* belonging to the artificial language of chemistry, and indicating the class to which the substance denoted by it belongs; i.e. the class containing *chlorine, bromine*, and *fluorine*. The vapour of iodine is of a violet-blue colour.] In *Chemistry*. Elementary substance so called, chiefly obtained from sea-water by means of certain sea-weeds. See Kelp.

Among the earliest measures proposed in recent times is the internal administration of burnt sponge, and the instances of success from this remedy are so numerous as might at first incline the student to believe that the object of his research is found. The mode of its operation is not at all known. By some the virtues of the remedy are made to reside in the alkali or in the charcoal which it contains, and later theorists have imagined that *iodine* is its active principle. These speculations led to the introduction of different preparations of *iodine* in the treatment of bronchocele; and experience has now fully demonstrated that this substance is possessed of considerable medicinal virtue. It appears to excite the absorbent system in a peculiar manner, and is fairly entitled to the general character of a deobstruent. Its employment, however, is not altogether harmless. It sometimes disorders the health, and occasions general emaciation. It is of course in the removal of morbid growths and indolent tumours that its power is chiefly displayed. In goitre it may be given both internally and externally.—*Gregory, Theory and Practice of Medicine*, pt. v. ch. v.

Derivatives, as *iodic, iodide, iodate, ioduret*, &c., and the compounds *hydriodate*, &c., are numerous.

The base generally ... composed of two tori, or convex rings, with a concave moulding, the scotia, between them. ... the Doric character demands plane surfaces and lines, so does the *Ionic* require curved mouldings and contours, as harmonising with the curved forms of the volutes of the capitals.—*Knight, English Encyclopædia.*

When this prospect vanished, he [Æschines] retired to Rhodes, where he opened a school of oratory, which produced a long series of voluble sophists, and is considered as the origin of a new style of eloquence, technically called the Asiatic, which stood in a relation to the Attic not unlike that of the composite capital to the *Ionic* volute, and was destined to prevail in the east wherever the Greek language was spoken, down to the fall of the Roman empire.—*Bishop Thirlwall, History of Greece*, ch. lvi.

Ióta. *s.* [Gr.] See Jot.

It is no [illegible] direct affront to our Creator and Governour, [illegible] of that law, that he values as a transcript [illegible] holiness, and enforces by the penalty of [illegible] threatened to the transgressors of the [illegible].—*Barrow, Sermons*, vol. i. serm. x.

L. Bulwer, Pelham*, ch. xliv.

Ipecacuanha is a small irregularly contorted root, rough, dense, and firm. One sort is of a dusky greyish colour on the surface, and of a paler grey when broken, brought from Peru: the other sort is a small root, resembling the former ... The grey ought to be preferred, because the brown is apt to operate more roughly.—*Sir J. Hill, Materia Medica.*

Íronclad. *s.* and *adj.* Vessel defended by iron-plates.

In estimating the performance of our *ironclads*, it should not be forgotten that they represent conditions of service without any precedent in former times. For protection's sake it is now necessary to clothe our men-of-war in ponderous iron armour, and for power's sake it is indispensable to equip them with guns of enormous calibre. These weights, it was thought, might prove incompatible with the buoyancy, swiftness, and seaworthiness expected from a fighting ship in days gone by, and, indeed, it was very recently believed that a good *ironclad* must be a bad seaboat [illegible]ections, however, will be materiall[illegible] the reports now published. A squadr[illegible] nine of our *ironclads*, selected so [illegible] almost all the varieties of the fleet, [illegible]ally kept the sea for a month during t[illegible] equinox, and the ships have shown go[illegible]ly qualities and high rates of speed.—*[illegible]paper*, Nov. 7, 1866.

Aristotle mentions, though very briefly, these two modes of rousing the feelings, the latter under the name of *Eironeia*, which in his time was commonly employed to signify, not according to the modern use of 'Irony,' saying 'the contrary to what is meant,' but, what later writers usually express by Litotes, i.e. saying less than is meant. The two methods may often be both used on the same occasion, beginning with the calm, and proceeding to the impassioned, afterwards, when the feelings of the hearers are already wrought up to a certain pitch. Universally, indeed, it is a fault carefully to be avoided, to express feelings more vehemently than that the audience can go along with the speaker; who would, in that case, as Cicero observes, seem like one raving among the sane, or intoxicated in the midst of the sober. And accordingly, except where from extraneous causes the audience are already in an excited state, we must carry them forward gradually, and allow time for the fire to kindle. The blast which would heighten a strong flame, would, if applied too soon, extinguish the first faint spark. The speech of Antony over Cæsar's corpse, which has been already mentioned, affords an admirable example of that combination of the two methods which has just been spoken of.—*Archbishop Whately, Elements of Rhetoric*, pt. ii. ch. ii. § 5.

Irritabílity. *s.* Capability of being irritated.

a. Mentally, or morally.

b. Physically: (applied to certain tissues, both animal and vegetable, in respect to their action under a stimulus).

Irritability [is] a power or property of organised bodies of being acted upon by stimuli, so as to give rise to movements, manifested chiefly by muscular or fibrous tissues. This very important and generally diffused property of animal bodies was first investigated by Dr. Glisson. He applied the term '*irritability*' to all the sensible and insensible movements of animals. . . . Haller and his disciples, with Fontana, Metzger, Bichat and others, considered *irritability* to be, sui generis, inherent in the muscular fibre, altogether independent of nervous influence. . . . On the other hand, Whytt, Monro, Unzer, Prochaska, Legallois, &c. regarded the nervous power as the principle upon which all muscular contractions depend, and consequently *irritability* to be communicated to the muscles by the nerves. . . . Very recently Virchow has published his own views on this subject. According to him, *irritability* is a property and criterion of every living cell and cell-derivate, and does not belong merely to nervous or muscular tissues. Every cell can be impelled to certain actions by influences which may operate upon it, either from other parts or elements of the same organism, or from bodies entirely foreign. The *irritating* power may reach the cells through nerves, through vessels, or through adjoining parts. Every *irritation* produces in the cellular elements some mechanical or chemical change, which change is 'a counter-working against the *irritative* cause, a reaction against an action working from without.'—*Copland, Dictionary of Practical Medicine.*

Next to inflammation, the morbid condition to which the term *irritation* has been applied is the most important both to the pathologist and to the rational physician. Notwithstanding this, the term has been vaguely employed; and the existence of the morbid states, which it has been used to designate, has been as loosely inferred. The varying characters, also, of *irritation* with the tissue or part primarily or chiefly affected, and with lesions of adjoining or of functionally associated parts, and the superinduction of other morbid changes, more particularly of increased exhalation, secretion, and inflammatory action, have given rise to much perplexity, in respect not only of the meaning attached to the word, but also of attempts of ascertaining its existence, seat, and extent. Hitherto *irritation*, as a primary morbid condition, has been inferred more frequently from the absence during disease of more manifest alterations, than from any positive proof of its presence; and to it have been referred by many, those disorders and maladies which could not be imputed to any more palpable lesion.—*Copland, Dictionary of Practical Medicine.*

Irritative. *adj.* Having a tendency to irritate.

(For example see Irritability.)

Irritátory. *adj.* Causing irritation.

Some make it clear by reiterated fermentations, and others by additions, as *isinglass*.—*Mortimer, Husbandry.*

Isinglass is a tough, firm, and light substance, of a whitish colour, and in some degree transparent, much resembling glue. The fish from which *isinglass* is prepared, is one of the cartilaginous kind: it grows to eighteen and twenty feet in length, and greatly resembles the sturgeon. It is frequent in the Danube, the Boristhenes, the Volga, and the larger rivers of Europe. From the intestines of this fish the *isinglass* is prepared by boiling.—*Sir J. Hill, Materia Medica.*

Islám, Íslamism. *s.* Mahometanism.

States have their respective policies, on which they move forward, and which are the conditions of their well-being. Thus it is sometimes said that the true policy of the American Union, or the law of its prosperity, is not the enlargement of its territory, but the cultivation of its internal resources. Thus Russia is said to be weak in attack, strong in defence, and to grow, not by the sword, but by diplomacy. Thus *Islamism* is said to be the form or life of the Ottoman, and Protestantism of the British empire; and the admission of European ideas into the one, or of Catholic ideas into the other, to be the destruction of the respective conditions of their power.—*J. H. Newman, Essay on the Development of Christian Doctrine.*

Isomórphism. *s.* [Gr. μορφή = form.] In *Chemistry.* See extract.

We will not quit the subject, however, without noticing the much more promising aspect which it has assumed by the detection of such groups as are referred to in the last article; or in other words, by Mitscherlich's discovery of *isomorphism*. According to that discovery, there are various elements which may take the place of each other in crystalline bodies, either without any alteration of the crystalline form, or at most with only a slight alteration of its dimensions. Such a group of elements we have in the earths lime and magnesia, the protoxides of iron and manganese; for the carbonates of all these bases occur crystallized in forms of the rhombohedral system, the characteristic angle being nearly the same in all. Now lime and magnesia, by the discoveries of modern chemistry, are really oxides of metals; and therefore all these carbonates have a similar chemical constitution, while they have also a similar crystalline form.—*Whewell, History of Scientific Ideas.*

Isopólity. *s.* [Gr. πολιτεία = polity.] Equality of political rights.

The constitution of a provincial city of the empire, in the days when the republic still possessed virtue and principle, was of this description, at all events from the period of the Social, Marsic, or Italian war, when the cities of Italy wrested *isopolity* or at least isotely, from Rome.—*Kemble, The Saxons in England*, b. ii. ch. vii.

From the want of uniformity of the surface of the globe, the *isothermal* lines, i.e. lines passing through spots which have an equal annual temperature, by no means correspond to parallels of latitude; the distribution of land and sea, and the alternation of plains and mountains, deflecting such lines to the north and south, sometimes to an excessive extent.—*Henfrey, Elementary Course of Botany.*

Íssuable. *adj.* So as to bring to issue or decision.

If a prisoner shall stand as contumacious in contempt, and shall not put in an *issuable* plea, guilty or not guilty of the charge given against him, whereby he may come to a fair trial; that, as by an implicit confession may be taken 'pro confesso.'—*Narrative of the Trial of King Charles I.* Jan. 25, 1648, p. 4.

Dryden.

When, in the year 1760, some bold men in the government proposed that the streets of Madrid should be cleansed, so daring a suggestion excited general anger. Not only the vulgar, but even those who were called educated, were loud in their censure. The medical profession, as the guardians of the public health, were desired, by the government, to give their opinion. This they had no difficulty in doing. They had no doubt that the dirt ought to remain. To remove it was a new experiment; and of new experiments it was impossible to foresee the *issue*. Their fathers having lived in the midst of it, why should not they do the same? Their fathers were wise men, and must have had good reasons for their conduct.—*Buckle, History of Civilization in England.*

8. In *Law.* See extract.

Issue hath divers applications in the common law: sometimes used for the children begotten between a man and his wife; sometimes for profits growing from an amercement, fine, or expences of suit; sometimes for profits of lands or tenements; sometimes for that point of matter depending in suit, whereupon the parties join and put their cause to the trial of the jury. *Issue* is either general or special: general *issue* seemeth to be that whereby it is referred to the jury to bring in their verdict, whether the defendant have done any such thing as the plaintiff layeth to his charge. The special *issue* then must be that, where special matter being alleged by the defendant for his defence, both the parties join thereupon and so grow rather to a demurrer, if it be quæstio juris, or to trial by the jury, if it be quæstio facti.—*Cowell.*

Cowley.

Plac'd on this *isthmus* of a middle state,
A being darkly wise, and rudely great.
Pope, Essay on Man, ii. 3.

It. *pron.* [A.S. *hit*. Observe the initial *h*: this shows its connexion with *he*, of which it is simply the neuter gender, and as such, in strict lexicography, a word that has no claim to a separate and independent entry. The Anglo-Saxon inflexion was *he, heo, hit* = he, she (*hoo* provincially), *it*, in the nominative; and *his, hire, his* = his, her, its, in the possessive, or genitive, case. As a sign of gender, the *t* is the *-t* in *what* and *that*. The irregular character of the present genitive *its*, which scarcely became thoroughly prevalent before the time of Charles II., is now manifest. It has its sign of case superadded to its sign of gender; just as if we said *whats* for *whose*.]

Iterable. *adj.* Capable of being repeated. *Rare.*

Others may wonder how the curiosity of elder times, having this opportunity of his [Apollo's] answers, omitted natural questions; or how the old magicians discovered no more philosophy; and, if they had the assistance of spirits, could rest content with the bare assertions of things, without the knowledge of their causes: whereby they had made their acts *iterable* by sober hands, and a standing part of philosophy.—*Sir T. Browne, Miscellanies*, p. 178.

Iterant. *adj.* Repeating. *Rare.*

Waters being near, make a current echo; but being farther off, they make an *iterant* echo.—*Bacon, Natural and Experimental History.*

Iterate. *v. a.* [Lat. *itero*; pres. part. *iterans, -antis*; pass. part. *iteratus*; adverb, *iterum* (generally this is translated *again, a second time*); its proper meaning, though not always found, even in the best writers, conveys the notion of immediate succession rather than mere repetition; Consul *iterum* = consul two years running.] Reiterate, though pleonastic, is the *commoner* word.

1. Repeat; utter again; inculcate by frequent mention.

We covet to make the psalms especially familiar unto all; this is the very cause why we *iterate* the psalms oftener than any other part of Scripture besides; the cause wherefore we inure the people together with their minister, and not the minister alone to read them, as other parts of Scripture he doth.—*Hooker, Ecclesiastical Polity.*

2. Do over again.

Ashes burnt, and well reverberated by fire, after the salt thereof hath been drawn out by *iterated* decoctions.—*Sir T. Browne.*

An honest man he is, and hates the slime
That sticks on filthy deeds.—My husband!—
What needs this *iteration*, woman?
I say, thy husband. *Shakespear, Othello*, v. 2.

It is an admonition which ... may sometimes prove useful to a young preacher, that he should ask himself, at the beginning, and in the course of his composition, 'For what purpose am I going to preach?' Wherein would any one be a loser if I were to keep silence? ... Let me not be satisfied with the thousandth *iteration* of common-places, on the ground that it is all very true, and that it is the fault of the congregation if they do not believe and practise it; for all this is equally the case whether I preach or not; and if all I say is, that they not only knew before, but had heard in the same trite and general statements a hundred times before, I might as well hold my peace.—*Archbishop Whately, Elements of Rhetoric*, pt. iii. ch. ii. § 3.

Ivied. *adj.* Overgrown with ivy.

Repeated objects of his view:
The gloomy battlements, and *ivy'd* spires;

Ivory is a hard, solid, and firm substance, of a fine white colour: it is the dens exertus of the elephant, who carries on each side of his jaws a tooth of six or seven feet in length; the two sometimes weighing three hundred and thirty pounds: these ivory tusks are hollow from the base to a certain height, and the cavity is filled with a compact medullary substance. —*Sir J. Hill, Materia Medica.*
